

Apple is fixing errors on MacBook Air

'Apple' investigates the cause of many screens on ultra-thin laptops that appear vertical lines or color distortions after starting from Sleep mode.

"Apple" investigates the causes of many screens on ultra-thin laptops that appear vertical lines or color distortions after starting from Sleep mode.

The *BGR* page leads reliable sources, saying that Apple certifies that these errors belong to the internal components and promises to release a software update to fix.

Many people said that the screen problem of the new MacBook Air is like the loss of wave on iPhone 4 when held in hand. Apple has been too focused on the ultra-thin fashion design and neglected product quality.

MacBook Air video error

Also related to Macbook Air, an interesting finding of *Ars Technica* page shows that when users turn off Flash when browsing the web, it will increase the battery life of the product about 2 hours compared to normal.
