

Apple locked iOS 11.2.6 sign, users will not be able to downgrade if upgraded to iOS 11.3

Users who have upgraded to iOS 11.3 will not be able to return to iOS 11.2.6.

Since 6/4, Apple has officially locked iOS 11.2.6 sign. This means that users who have upgraded to iOS 11.3 will not be able to return to iOS 11.2.6. The time of this sign lock of Apple seems a bit early because iOS 11.3 is currently being used by many users.

At the end of March, Apple launched iOS 11.3 with a series of improvements and new features such as Battery Health battery management, AR experience support, changing data security policies.

But this new version is quickly detected with many errors such as faster battery life, software updates, no keyboard display, Bluetooth connection error and user interface on Apple Music, icon hanging, can't be Type some special characters, type the text slowly or disconnect the AirPods headset suddenly.

After a period of launching a new update, Apples will lock the sign and unsubscribe to the old version to enhance security, avoiding the risk of hackers exploiting vulnerabilities and attacks.
