

Apple officially declared iPhone X, SE, 6s, 6s Plus

iPhone SE, iPhone 6s / 6s Plus and iPhone X were officially declared dead by Apple after the company released new iPhone models 2018.

According to Apple's annual tradition, phone models last year will be reduced by about \$ 100 when a new model comes out. But this year, the iPhone SE, iPhone 6s / 6s Plus and iPhone X were officially declared dead by Apple after the company launched new 2018 iPhone models.

The death of iPhone 6s and iPhone 6s or iPhone SE has been anticipated but with the iPhone X, the new smartphone launched last year and opened many revolutionaries such as smartphone costing thousands of dollars, smartphone screen phones Rabbit, . makes many people not surprised.

And of course, the cause of this is in the word 'profit'. In the newly launched iPhone trio, Xr is the product Apple chooses to develop for less-cost users who want to buy an iPhone. Those who are using iPhone X will not need to upgrade to iPhone Xs or Xs max and those who want to buy new iPhones will wait for iPhone X to drop in price and this directly affects iPhone XR or iPhone 8/8 Plus . Therefore, the death of iPhone X, though it was only introduced for less than a year, is the best choice.

It is also for the profit that Apple has cut the headphone jack, not to provide a quick charger for users when buying iPhone Xs. People who buy new iPhones if they want to use these tools will have to buy their own money. The price of iPhone is getting higher and higher, rising sharply from iPhone 2G (\$ 499) to iPhone Xs Max (\$ 1,099), but Apple is increasingly stingy with users.
