

Apple Pay has supported most bank payment cards in the US

This is a very fast step for Apple as they have just introduced this feature and are limited to some newer devices. Therefore, it is very impressive that Apple Pay's service accounts for 90% of the credit card payment value in the US.

This is a very fast step for Apple as they have just introduced this feature and are limited to some newer devices. Therefore, it is very impressive that Apple Pay's service accounts for 90% of the credit card payment value in the US.

Apple told *The New York Times* that their Apple Pay service is now widely available and accounts for 90% of payments via credit card, using the Apple Pay feature on new iOS devices. .

To be more clear, not every 10 purchases with credit cards will have 9 times of users using Apple Pay. But with \$ 10 purchases, the value paid by Apple Pay is up to \$ 9. However Apple does not specifically announce the number of times that users use Apple Pay to pay.

The statistical food industry has a total of 150,000 transactions that users use Apple Pay. 12% of all McDonald's tap-to-pay services are made by Apple Pay. Many users have used NFC with Google Wallet service and an RFID American Express card to pay with McDonald through tap-to-pay service since 2011, so this food supplier may not feel strange. What's wrong with Apple Pay.

Apple Pay is very convenient and shows Apple's great ambition to bring iOS devices to a new level, replacing the user's usual credit card habits. Users can pay quickly with Apple Pay only if the service they use supports

this payment feature.
