

Apple quietly upgraded the MacBook configuration

On May 27, Apple computer company quietly launched MacBook products that are selling for \$ 999 with a configuration much stronger than previous versions.

On May 27, Apple computer company quietly launched the MacBook laptop products which are selling for 999 USD with the configuration is much stronger than previous versions .

Accordingly, these plastic MacBooks were equipped with 2.13 GHz Intel Core 2 Duo CPU. With this upgrade, Apple's low-end MacBook had a higher-speed chip than the MacBooks with aluminum (priced at \$ 1,299).

In addition, with other configuration changes, the plastic casing is almost equivalent to mid-range models, such as 2GB DDR2 bus 800 RAM (the old configuration is 2GB of bus RAM 667) and a 160 hard drive. SATA GB instead of 120 GB hard drive.

In addition to these changes, the other details of the plastic MacBook are still kept as original as the mini DVI port (mid-range models with DisplayPort ports), the Nvidia GeForce 9400M graphics processor (with a few additions). last month) and FireWire 400 port.

This action shows that Apple has not intended to bring this model "retired" in the next few years.
