

Apple released a super strong version of MacBook Pro

In the end, rumors of a new upgraded version of the Apple MacBook Pro laptop also came true. On February 26, Apple introduced the new MacBook Pro with a very powerful configuration.

In the end, rumors of a new upgraded version of the Apple MacBook Pro laptop also came true. On February 26, Apple introduced the new MacBook Pro with a very powerful configuration.

In addition to the new MacBook Pro version, Apple also released three laptops in the MacBook series with faster processors and larger hard drives.

The MacBook Pro version is integrated with the latest Intel Core 2 Duo processor (clocked at 2.6GHz, 6MB of L2 cache), larger hard drive (300GB), and 2GB of RAM as most MacBook Pro models.

Apple also incorporates the latest Nvidia graphics chip version with up to 512MB of video memory, and a new and innovative multi-Touch mouse touch system.

Meanwhile, three new versions of the MacBook are also equipped with faster chips and larger hard drives. Specifically, the two MacBook models with 2.1GHz and 2.4Ghz chips are equipped with 120GB hard drives and 160GB (5400 rpm); and the remaining 2.4GHz version (in black) is equipped with a 250GB hard drive (4500 rpm). All of these laptops have 2GB of RAM.

Prices for the new MacBook and MacBook Pro versions are \$ 1,099 and \$ 1,999, respectively.
