

Apple released an update for iOS 11

Apple has released iOS 11.0.1 update for the iPhone, iPad and iPod Touch to the public today.

Apple has released iOS 11.0.1 update for the iPhone, iPad and iPod Touch to the public today. Apple did not release any beta to developers before launching iOS 11.0.1. This update came out just a week after iOS 11 was first released. iOS 11.0.1 is a small update, Apple fixes many bugs and improves the security for iOS 11.

iOS 11 brings many new features like scanning documents in Notes, Do Not Disturb While Driving to ensure safety when driving, applying new Files, indoor maps, lane directions on Maps, Live Photos editing , new multitasking feature on iPad, Messenger drawing tool, integrated billing with iMessage, new Control Center and smarter Siri version.

Some bugs were reported after iOS 11 was released, including errors that cannot completely turn off Bluetooth and WiFi. There is also a problem with battery life. A report by Wandera shows the problem of battery life is very bad. It seems that iOS 11's battery consumes twice as fast as iOS 10.

Newly released iOS 11 has many problems

Regarding email synchronization via Exchange protocol, Apple also knows that you may see an error message saying 'Cannot Send Mail. The message was rejected by the server 'if your mail account hosts on Outlook.com, Office 365 or Exchange Server 2016 running on Windows Server 2016.

What's in iOS 11.0.1 update?

In the update notes, Apple does not provide much information about iOS 11.0.1. The download and installation summary only states that iOS 11.0.1 'has bug fixes and some improvements on iPhone and iPad'.
