

Apple released iOS 11.3, macOS 10.13.4, tvOS 11.3 and watchOS 4.3

After a 2-month beta test, Apple released iOS 11.3, macOS 10.13.4, tvOS 11.3 and watchOS 4.3, the latest versions of the operating system. Each version contains a handful of new features, as well as fixes.

After a 2-month beta test, Apple released iOS 11.3, macOS 10.13.4, tvOS 11.3 and watchOS 4.3, the latest versions of the operating system. Each version contains a handful of new features, as well as fixes.

The latest iOS, macOS and tvOS versions include a new Privacy screen, introducing a flag icon for Apple's app or personal information requests, as well as links to usage information. and protect that data from Apple. Although this Privacy feature is already available in the beta test version of the previous month.

iOS 11.3 is a new update of iOS including battery status measurement, designed to indicate when the battery on the device deteriorates according to the life expectancy, reduced battery operating status on the device.

It also includes a visual update for augmented reality ARKit application, four new Animoji for iPhone X, support for storing medical records on iPhone, and a Message feature called Business Chat to allow the Participating companies provide live chat via customer service via Apple's iMessage network.

macOS 10.13.4 is the first version of macOS officially supporting external GPUs, allowing new Macs to use high-performance graphics cards. This version also includes Message Chat Business Chat support and a variety of security fixes for Safari. This macOS version also provides future incompatibility alerts when you run 32-bit applications if not compatible.

tvOS 11.3 is a relatively small update for fourth generation Apple TV and Apple TV 4K. Initially it is expected to include a key feature, AirPlay 2, that allows iOS and tvOS devices to synchronize audio on multiple Apple TVs or HomePod at the same time. Some features have been cut, leaving only a few small additions such as the Privacy screen, automatic frame rate conversion for fourth generation Apple TVs and other fixes.

watchOS 4.3 is also a small update for Apple Watch users. This version has a new battery charging feature, the option to use Nightstand Mode to display the current time in portrait view, and some minor graphic adjustments for warnings and application download indicators.

Although it is not a specific feature of the operating system, Apple has also updated the Music app on its devices and released iTunes 12.7.4 to include a large collection of free videos. for shoppers on Apple Music.
