✓	iPod touch 6	iOS 12.4.2 (16G114)	26th September 2019	2.62 GB

Information posted on Apple's website states that this iOS 12.4.2 update fixes a vulnerability that allows an attacker to close the application abruptly or execute arbitrary malicious code remotely.

Users who are currently on the list of supported support updates can download this update via OTA by going to Settings -> selecting General settings -> selecting Software update.

Along with iOS 12.4.2, Apple also released watchOS 5.3.2 for the Apple Watch Series 1/2. The watchOS 6 update is expected to be released later this fall.

Apple has a lot of problems with iOS 13 version with many holes still exist. In order to fix those errors, Apple has released iOS 13.1 update, but many users complained that they could not automatically update this version via OTA.

1. Security bugs on iOS 13 still exist on iOS 13.1, users note
2. New features on iOS 13.1
3. The iOS 13 update has many bugs that affect user experience
