

Apple released Mac OS 10.8.2 for programmers supporting Facebook and iMessages

In addition to updating for users to version 10.8.1, Apple also introduced a trial version with important features such as Facebook and iMessages.

In addition to updating for users to version 10.8.1, Apple also introduced a trial version with important features such as Facebook and iMessages.

The screenshot shows a 'Software Update' notification from Apple. It indicates that updates are available for the computer and that a restart is required. The update is for OS X Mountain Lion 10.8.1. The notification lists several fixes: resolving an issue with Migration Assistant, improving compatibility with Microsoft Exchange servers, addressing audio playback through Thunderbolt displays, resolving iMessage sending issues, and fixing SMB server connection problems. A link to the support page is provided at the bottom.

Updates are available for your computer

OS X Update 10.8.1

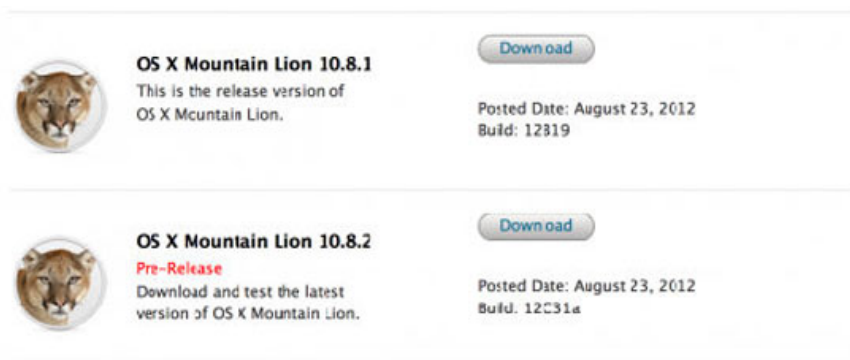

The 10.8.1 update is recommended for all OS X Mountain Lion users and includes general operating system fixes that improve the stability and compatibility of your Mac. The 10.8.1 update also includes fixes that:

- Resolve an issue that may cause Migration Assistant to unexpectedly quit
- Improve compatibility when connecting to a Microsoft Exchange server in Mail
- Address an issue playing audio through a Thunderbolt display
- Resolve an issue that prevents iMessages from being sent
- Resolve an issue when connecting to SMB servers with long names
- Address an issue that may cause the system to become unresponsive when using Pinyin input

Errors fixed in Mac OS 10.8.1.

Mac OS users this morning began to be notified of the new update. If you don't receive the message, you can access Apple Menu and choose Software Update. Most updates in the new version point to specific errors such as the Thunderbolt Display output port or "hang" in the Migration Assistant program. There is also a minor fix for iMessages with undeliverable errors as well as improved interoperability in Mail.

This section displays two download options for OS X Mountain Lion. The first is for version 10.8.1, which is the release version, with a posted date of August 23, 2012, and build 12B19. The second is for version 10.8.2, which is a pre-release version, with a posted date of August 23, 2012, and build 12C31a. Both options include a 'Download' button.

Version 10.8.2 for programmers.

Another noteworthy point is that Apple also released version 10.8.2 for developers with many waiting features. Accordingly, the company will focus on a range of social fields as well as other convenient applications, including Facebook, Messages, Game Center, Note and even the company's web browser, Safari.

"Apple" also recommends that users when installing the developer version should delete the old operating system data or install on a new partition for the best experience.
