

Apple unveiled the MacBook Pro Retina screen

At 0:00 today, Apple officially introduced to the world the MacBook Pro Retina display, using Haswell CPU. The use of Intel's new processor will help improve performance as well as the battery life of the MacBook Air laptop just released not long ago.

At 0:00 today, Apple officially introduced to the world the MacBook Pro Retina display, using Haswell CPU. The use of Intel's new processor will help improve performance as well as the battery life of the MacBook Air laptop just released not long ago.

Specifically, the MacBook Pro 13-inch version will have an average operating time of about 9 hours on a single charge, while the 15-inch version stops at 8 hours. Apple products use Haswell CPU, integrated advanced Iris graphics, using SDD PCI drive.

It is equipped with 2 Thunderbolt ports and standard WiFi 802.11. In particular, the 15-inch version will use discrete NVIDIA GeForce GT 750 graphics card.

The 13-inch MacBook Pro is priced at US \$ **1,299** (equivalent to **VND 27 million**), we will continue to update product prices on the Vietnamese market. The 13-inch MacBook Pro has specs with a 2.4 GHz dual-core Core i5 CPU, 4 GB of RAM and 128 GB SDD. Meanwhile, the **15-inch MacBook Pro** configured quad-core Core i7 CPU clocked at 2.4 GHz, 8 GB of RAM will be at \$ **1999** (equivalent to **42 million**).

The MacBook Pro deserves to be one of the most attractive laptops for a shopping occasion **later this year**.
