

Apple will death 3D Touch on iPhone?

According to analysts, 3D Touch - a feature that uses force on the iPhone touch screen to preview content or quickly open Apple apps will no longer appear on the iPhone next year.

According to analysts, 3D Touch - a feature that uses force on the iPhone touch screen to preview content or quickly open Apple apps will no longer appear on the iPhone next year. Apple's touch-screen technology first appeared on iPhone 6S since 2015.

Barclays analyst Blayne Curtis said that 3D Touch will not appear on some iPhones next year. Earlier, analyst Ming-Chi Kuo also predicted that Apple would remove 3D Touch in this year's release.

If both analysts' estimates are correct, then on the iPhone models of 2019 will not have 3D Touch. However, 3D Touch is the leading feature on the iPhone 6S that Apple has invested a huge amount of resources, so test it like it is an acknowledgment of Apple's failure.

Phil Schiller, Apple's marketing director, shared that 3D Touch is the result of a clever combination of technology and hardware.

However, many iPhone users do not even know the existence of this feature or know but do not use it because there is no need.

Rumors may not be accurate so it is still too early to analyze the failure of 3D Touch. Apple can still improve the company's touch screen technology to become more useful on new models in the future.
