

Apple will have 3 new phones in 2018, including a super iPhone

According to KGI Securities Ming-Chi Kuo analyst, Apple will release 3 new iPhone models in 2018.

According to KGI Securities Ming-Chi Kuo analyst, Apple will release 3 new iPhone models in 2018.

Kuo and his team are known for detailed and accurate forecasts about Aooke's future products, thanks to his relationships in the Asian manufacturing industry.

'We expect Apple to launch three new iPhone models in 2018: Those are 6.5-inch OLEDs and 5.8-inch, a 6.1-inch TFT-LCD. All will have a full screen design and use TrueDepth Camera (3D front sensor) just like the iPhone X, 'Kuo said.

The two iPhones will target the high-end market, while the third will target the medium and low markets. Kuo also predicts the price will range from \$ 649 to \$ 749.

Prediction of the iPhone 2018

Of the two high-priced iPhones, one will have the same technology and screen size as the iPhone X, and a large iPhone X will have a 6.5-inch screen size. They will all have screens overflowing to the sides, using Face ID face detection technology like iPhone X.

The other can use face detection instead of hand sensor, 6.1-inch LCD screen has lower resolution than the above OLED phones, and there are also differences in hardware parameters and design.

According to Kuo's prediction, there will be between 100 million and 200 million iPhones in the second half of 2018. Three new iPhones will also form 'a true super spin' in terms of replacement needs.

Kuo called it because he expected Apple to choose the right time to launch a new phone as well as a variety of prices. He also said that Apple's stock and major supply in 2018 will be positive.
