

Apple will release a completely new 16-inch MacBook Pro and a 32-inch 6k screen this year?

In a research note by MacRumors, market analyst Ming-Chi Kuo revealed an information that has received a lot of interest from the iFan community ...

In a research note by MacRumors, market analyst Ming-Chi Kuo revealed an information that received a lot of interest from the iFan community, which is that Apple is currently planning the launch. market a new MacBook Pro product with a completely new design this year, opening the screen with a model with a screen size of 16 to 16.5 inches. If this becomes true, the 2019 MacBook Pro will be the largest MacBook screen to date since 17-inch models were declared dead in 2012. In addition, Mr. Ming-Chi Kuo also said Knowing this product line may include adding a 13-inch model, supporting 32GB of RAM, which is equivalent to the amount of RAM equipped on the MacBook Pro 15 inch 2018.

1. Apple bought AI startup with ambition to dominate the Alexa and Google Assistant applications market?

In terms of appearance, the complete innovation in the design language of the MacBook Pro 2019 may create a bit of surprise for users because Apple is famous for being a very 'lazy' manufacturer changing design or upgrading features, if any, are just minor changes, such as the US giant's only release of the first Touch Bar until the end of 2016, ie more than four years after the screen models Previous Retina image was introduced. However, the expert did not disclose exactly what the changes were, but only talked about upgrades to hardware such as keyboards and monitors (as mentioned above). In particular, the input experience will certainly be a factor that has been particularly focused on the new MacBook Pro, after its predecessors have received quite a

bit of 'stone tiles' from users on bounce and distance. The keys are quite bad, affecting the user experience. The new design will of course have to have clever remedy solutions to avoid recurring a similar phenomenon.

In addition, 2019 will also be the year to mark the return of Apple in the high-end removable screen market with a model with a large and high quality display with 31.6 inches and a resolution of 6K, copper The product will also be equipped with Mini LED backlight, with many improvements compared to traditional LED backlight.

1. Revealing Apple's latest invention: The keyboard is made of glass and can be bent

Three years ago, Apple stopped producing Thunderbolt Display screens, Mac users could only select third-party screens, such as LG UltraFine 5K 27 inches. Perhaps 2019 will be a year to mark a strong return of Apple, after a difficult time with successive news about financial problems and growth in the second half of 2018.
