

# Apple's cheapest iPhone was revealed, inherited from iPhone 14 and iPhone 15

The latest information about iPhone SE 4 continues to be revealed.

Images of Apple's most affordable iPhone have just been revealed by Majin Bu account on social network X. Specifically, it is a compact case, with only a single camera cluster and Most importantly, the case can fit the iPhone SE 4 model.

According to many recent sources, iPhone SE 4 will have many significant changes compared to its predecessor. The device will have the design of iPhone 14, the screen size will increase from 4.7 inches LCD to 6.1 inches OLED. In addition, the TouchID fingerprint recognition system will also disappear and be replaced by the familiar FaceID system on iPhone 14 lines. Although it only owns a single camera, Apple has favored this product line with Sensor up to 48MP. The rather large camera size on the back also implicitly determines the impressive resolution growth on this product line.

Another big surprise is the design of the side of the case, it seems that Apple has brought an Action button on the iPhone 15 Pro and 15 Pro Max lines. This is Apple's latest generation button, intended to replace the legendary ringer on/off button on previous iPhone models. Users can choose functions and assign them to this key. The Action button may also appear on the upcoming iPhone 16 series.

Regarding configuration, recent rumors also confirm that the iPhone SE 4 will use the Apple A16 Bionic processor chip currently used on the iPhone 15 and 15 Plus lines.
