

Applications that create color images on a black and white background are great or you should not ignore them

Want to highlight an object in the image on a black and white background? You can do this right on your smartphone with the following applications.

You may have seen photos on the Internet that only had one object filled with color, the rest were black and white and wondered how they could make such a photo. This article will show you how to create color images on black and white background.

In the past, you needed computers and tools like Photoshop and GIMP to create that effect. However, today you can do it easily on your smartphone.

Applications that create color images on a black and white background

1. Color Splash Effect
2. Color Splash Photo
3. Color Splash Effect Photo Editor
4. Paletta - Smart Color Splash
5. Photo Splash - Photo Editor
6. Touch Color Effects
7. Color Splash Lightroom Effect

1. Color Splash Effect

1. Download Color Splash Effect for Android

Color Splash Effect is a simple application that turns images into black and white backgrounds to highlight a certain object in the image. What's interesting about this application is that it provides Smart Color mode to automatically detect objects and add color to it. This mode is very handy when you want to color objects while the background remains the same.

When you open the application, you will get the option to select Splash mode. However, sometimes you need to edit the image first. To edit an image, select the image, then press the back button to bring it to the image editor. When you're done editing, press the **Splash** button to highlight the color.

In the app, tap and zoom icon to use pinch gestures to zoom in and out. The image will automatically turn into black, removing other colors using **Eraser** .

2. Color Splash Photo

1. Download Color Splash Photo for Android

Color Splash Photo provides a number of features to highlight colors in photos. For example, you can edit the brush size, undo the stroke, blur the image and even change the object color.

After uploading the image to the application, you will see that it is saturated. Touch the **Original** option at the end and start coloring the desired area. Use the Brush option at the top to change the brush size. You can use Gray tools like eraser.

3. Color Splash Effect Photo Editor

1. Download Color Splash Effect Photo Editor for Android

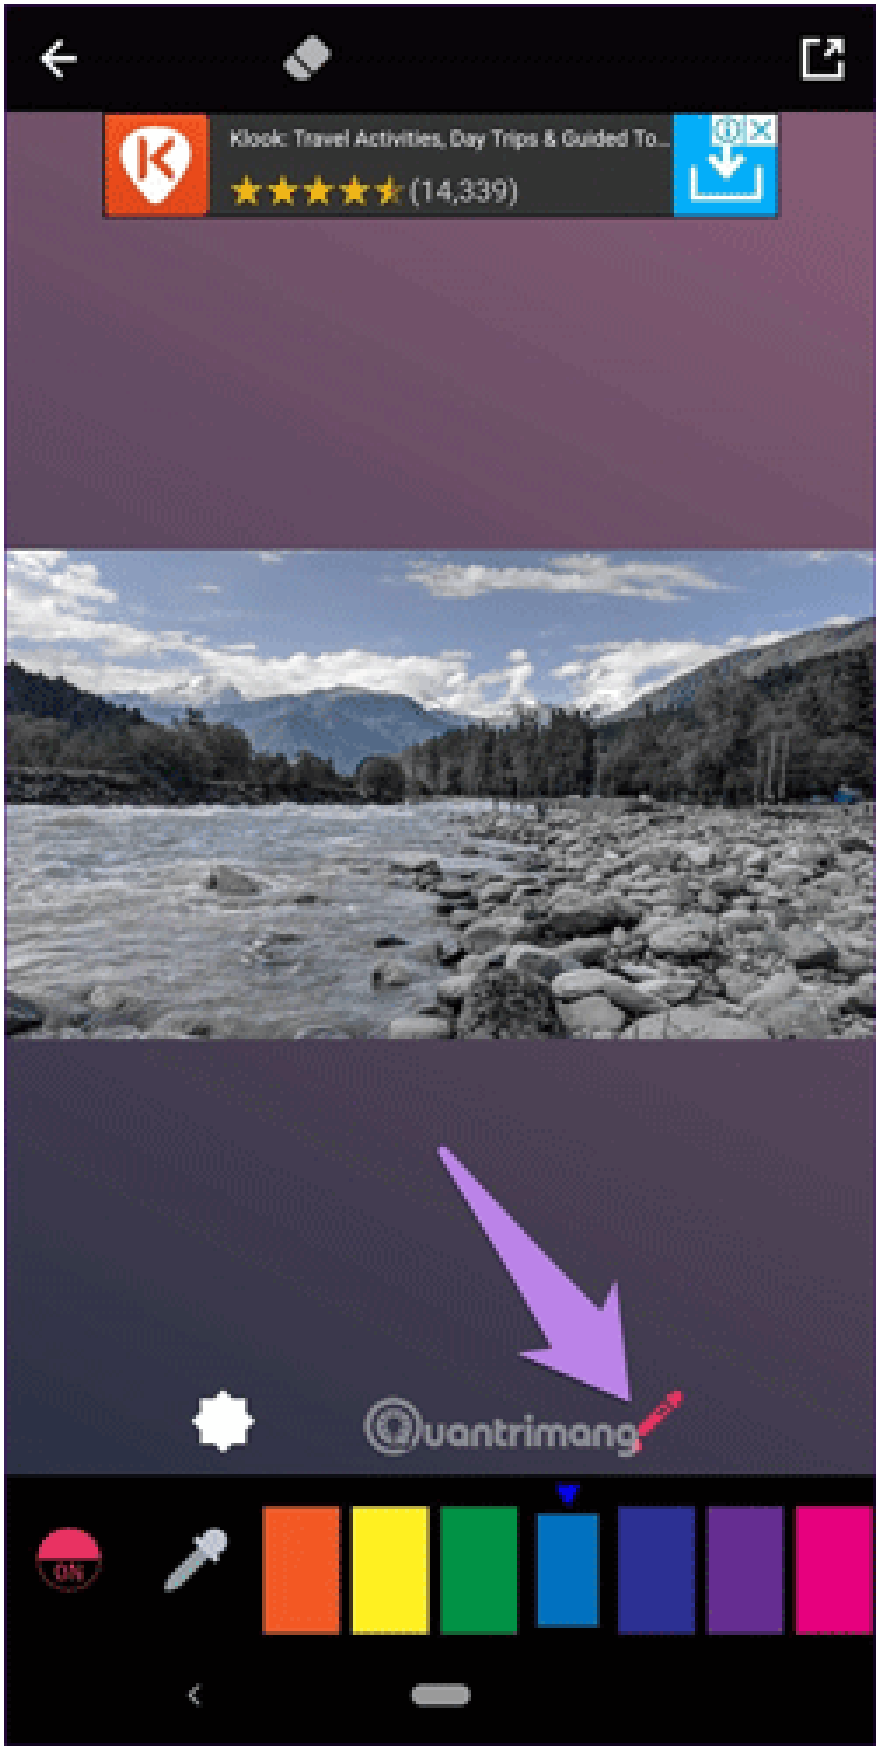

The application provides three ways to highlight objects in photos. The first is the normal mode, you need to color certain areas to highlight colors.

In the second mode, you will get many different shapes. The outside of the frame will turn into black and white and inside is the object to be colored. You can also reverse the effect so that the outside is a colorful image and inside is a black and white image. To do this, touch the frame twice, using pinch gestures to increase or decrease the frame size.

In the final mode, you need to select predefined colors and it will color automatically. To activate this mode, touch the color pick icon at the end.

4. Paletta - Smart Color Splash

1. Download Paletta - Smart Color Splash for Android

This application uses artificial intelligence to detect colors in photos. You need to touch the image to activate this feature. Users can activate multiple colors with just a light touch. If you don't like automatically coloring objects, you can adjust it with a brush and eraser.

Tip: Touch and hold the tool to change the size of the eraser and brush.

5. Photo Splash - Photo Editor

1. Download Photo Splash - Photo Editor for iOS

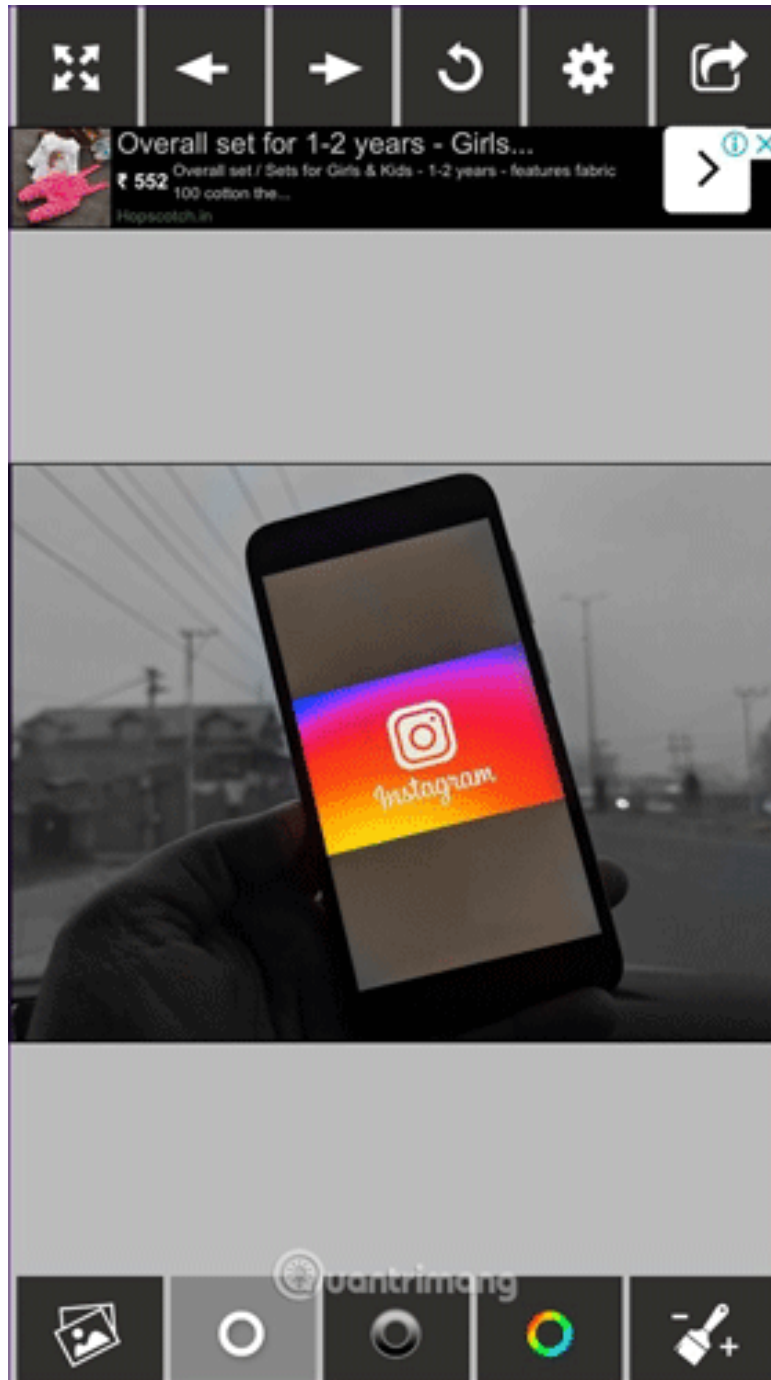

The application provides two modes: manual and automatic. By default, the application will activate manual mode. You will need to color the desired area using the brush. This way you can change the size at will. When auto mode is turned on, the application detects the outline of the object to be colored. You can even apply filters to images on the app.

6. Touch Color Effects

1. Download Touch Color Effects for iOS

This application also has a simple tool to highlight objects in images. Although the application does not provide the default mode, manual mode allows you to change the opacity and brush size. Interestingly, the application offers many gestures such as zoom in, zoom out, rotate objects, etc.

7. Color Splash Lightroom Effect

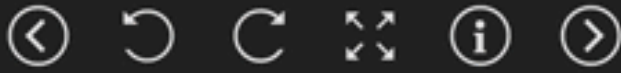

1. Download Color Splash Lightroom Effect for iOS

Similar to the Color Splash Effect Photo Editor application, this application allows you to add image area fill effects using shapes. Only in the new image is the color, the rest will be black and white. When launching the application, you are provided with two options: Color Splash and Shape Splash. In Shape Splash mode, double tap on the shape at the end to reverse the color.

In normal color mode, you can change the brush size and opacity. However, you can even undo the coloring without deleting it.
