

AQUOS R2 Compact: The smartphone has both moles and rabbit ears, being rated 'worst in history'

AQUOS R2 Compact is a new phone introduced by Sharp, a Japanese smartphone company on their website. This smartphone not only has moles on the top but also has a large sized rabbit ear on the bottom of the screen.

AQUOS R2 Compact is a new phone introduced by Sharp, a Japanese smartphone company on their website. This smartphone not only has moles on the top but also has a large sized rabbit ear on the bottom of the screen. This is the solution given by Sharp to increase the ratio of the screen to the body while keeping the fingerprint sensor ahead.

Aquos R2 Compact is equipped with Snapdragon 845 chip, 4GB RAM, 22.6MP camera and IGZO LCD screen size 5.2 inches, resolution of 2280 x 1080 pixels. The battery has a capacity of 2,500mAh.

Although the design is not very delicate (including rabbit ears and moles), but with this configuration, AQUOS R2 Compact is the most powerful smartphone in the smartphone screen of about 5 inches.

As expected, AQUOS R2 Compact will be launched in 2019 and can only be sold in Japan.
