## Should an oil heater be used for infants?

Infants often have thin skin that is very sensitive so mothers often wonder if oil heaters can be used for babies. Compared to the heating line in the market such as electric blankets, fan heaters, heating lamps, the choice of oil heater is most suitable.

## MÁY SỬI DẦU

Chăm sóc giấc ngủ cho bé

Because oil heaters do not burn oxygen, do not dry the skin so it does not affect your baby's sensitive skin. Therefore, the mother is completely assured of this issue. In addition, the oil heater has the following advantages:

1. Oil heaters have the function of automatically disconnecting when tilting, so it is safe to use for your baby.
2. The oil heater does not glow so it does not affect the baby's eyes, making it easier to sleep.
3. Oil heaters also equipped with drying rack very convenient when the mother needs to dry clothes.
4. High durability, no noise when used.
5. Oil heaters have a variety of models: Oil heaters 9 bars, oil heaters 11 bars, 13 bar oil heaters should be suitable for many different areas.

With the above advantages, surely the mother has found the answer answer already.

## Notes when using oil heaters for homes with babies

1. The mother should use an oil heater in a closed room (ie close all the doors). After that, turn on the oil heater for 10 minutes to warm up the room to avoid long wait.
2. Do not place a heater near your baby to avoid unwanted accidents like a baby pouring into a baby.
3. You need to put the oil heater on a flat surface so that you can reduce the durability.
4. Should choose the average temperature that will be more suitable for children, should not use the maximum capacity will consume electricity, reduce durability but not good for your baby's skin.
5. You can set the off timer to avoid wasting electricity.
