

# Are phone cleaning apps really effective?

One of the topics users are interested in on forums relates to phone cleaning apps. If you're wondering whether phone cleaning apps are really effective, read on to find the answer in this article from TipsMake.

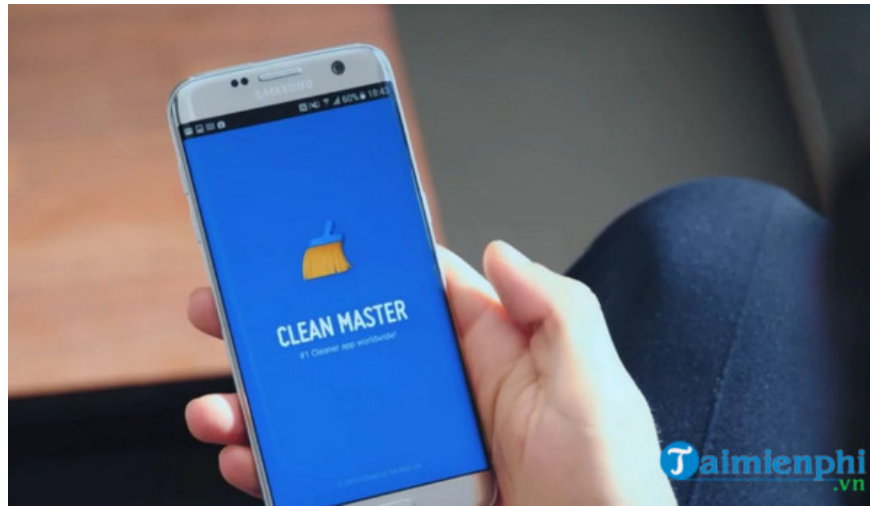

**Clean Master** is one of the most popular **phone cleaning apps** currently available, with over half a billion downloads on the Google Play Store and more than 33 million 5-star reviews. Besides Clean Master, there are other cleaning apps like Nox Cleaner and CCleaner , etc. However, one of the issues users are concerned about on forums today is whether these phone cleaning apps are truly effective?

Is using a junk file cleaning app on your phone effective?

There are two main reasons why users' phones slow down: system junk and malware/viruses. That's why many users choose to use junk cleaning apps and antivirus software on their phones. These apps "self-promote" their ability to speed up mobile phones and protect devices from viruses and other annoying software.

Among all the junk file cleaning apps for phones, we can't overlook Clean Master. The app includes 6 main features. One of them is the junk file cleaning feature, which helps free up device storage space by removing junk files and cache – the culprits behind slow device performance.

Antivirus features prevent malware and viruses from attacking user devices. Wifi security features can detect and alert users to fake Wifi connections designed to steal user data.

Additionally, the app is equipped with features to secure photos and videos, speed up your phone by freeing up RAM, and finally, a feature to help extend your device's battery life.

To download and install Clean Master, click [here](#).

Besides Clean Master, there are many other effective phone cleaning apps. You can also check out the top best phone cleaning apps.

This topic is currently causing controversy on several forums.

According to AndroidPit, phone cleaning apps work by deleting cache files to speed up the device. However, users can also manually delete these cache files without needing third-party apps.

To clear cached files on Android, go to **Settings** => Storage => **Cached data** => **Clear cached data** => **OK** .

Additionally, another common characteristic of these apps is that they consume a lot of device battery and contain many advertisements (especially the free ones).

Some users on the Quora forum shared that after using the app to clean up junk files and speed up their phones, they felt that the device's performance didn't improve at all.

For the reasons above, TipsMake advises you **NOT** to install these applications. However, if you want to try them out and your phone has enough free space, you can install and use these applications on your device.

The article above from TipsMake has answered your question about whether phone cleaning apps are really effective. Additionally, if you have any further questions or need clarification, such as which computer cleaning software is good, please leave your comments below.
