

As of October 6, the AAG fiber optic cable is completely repaired

Due to complicated weather conditions, it is expected that the completion of a broken AAG fiber optic line will be completed on October 6.

Due to complicated weather conditions, it is expected that the completion of a broken AAG fiber optic line will be completed on October 6.

Mr. *Nguyen Van Khoa*, General Director of FPT Telecom, said that the broken AAG cable repair schedule will start on September 29, the welding of the broken cable will be conducted on October 4 and expected to come. 6.10, the repair of AAG optical fiber will be completed.

This is the second break of AAG fiber optic cable this year (*the first time broken in July last*). This time, the AAG international optical fiber cable was broken at the Hong Kong side segment.

During a cable break, Internet access to foreign sites will be affected, but domestic sites will still run normally.

Currently, network providers are working to add traffic to users with other backup methods, to minimize the impact of slow access to international sites.
