

Asus died of a small line of Eee PC laptops

The media said that in the context of the tablet computer is increasingly becoming a strong trend in the market, Asus has decided to death of the line of small, cheap laptops (Eee PC netbook) of they.

The media said that in the context of the tablet computer is increasingly becoming a strong trend in the market, Asus has decided to death of the line of small, cheap laptops (Eee PC netbook) of they.

After five years 'winding up' in the netbook market as a pioneer, Asus has found that netbook products are no longer suitable.

According to *DigiTimes*, Taiwanese computer maker has just reduced the output of all Eee PC models, and gradually converted to marketing for the Transformer tablet, to fill the gap of the 10.1-netbook segment. inch.

Previously, experts pointed out that, with the ultra-thin laptop model, the ultra-high-end ultrabook as well as convenient tablet models can support high-quality gaming and video without being slowed down. , jerking, the presence of netbooks has become meaningless.

Recently, Asus CEO Jerry Shen also confirmed that they will stop producing Eee PC netbooks using Atom processors, such as the N2600, for example, because tablet-based influence has caused demand for netbooks. strong decline.
