

ASUS introduces the S Series Ultrabook in Vietnam market

Yesterday, ASUS launched the new S Series ultrabook market in Vietnam with higher storage performance, more options at attractive prices.

Yesterday, ASUS launched the new S Series ultrabook market in Vietnam with higher storage performance, more options at attractive prices.

S series meets the standards of an Ultrabook with aesthetic and high-end design. The body is only 21 mm thin, the powerful Intel Core 3 processor and the NVIDIA GT 635M discrete graphics card. This is the option for users who need to move high levels every day.

S series for extremely fast response thanks to the simultaneous drive of SSD / HDD and optical drive. The product also has a solid, solid monolithic keyboard, a smart, user-friendly, intuitive mouse gesture, a fast restart function for 2 seconds. Besides, with the design orientation of aesthetic, functional, high-speed storage, customers can choose the K46 / K56 notebook to accompany and be satisfied with different computing needs. mine.

S Series Ultrabook.

Ultrabook is highly aesthetic

What is remarkable about the S series is its 21-millimeter slim body, a remarkable achievement despite the integration of a large number of internal technologies. The S series case and style are designed with a thin, gray metal handle, and a solid molded keyboard surface makes the product sturdy and durable in high mobile conditions.

Reliable performance

ASUS has integrated the reboot feature within 2 seconds on the S series thanks to the exclusive Super Hybrid Engine II technology, allowing users to return to work or entertainment immediately similar to a smartphone. User data is also preserved with auto backup function when the battery is below 5%. The core power of the new S series ultrabook also comes from the 3rd generation Intel Core processor, NVIDIA GT 635M discrete graphics card.

Besides an optical drive that extends the choice of communication for users, Ultrabook S6 series uses hybrid HDD (500 GB HDD + 24 GB SSD). This combination helps users take advantage of the large memory capacity of the HDD while optimizing the benefits of SSD (* SSD uses a special area for caching, which speeds up the processing process by keeping the The data usually has to be accessed there, so there is no need to access the main memory whenever needed.

According to PCMark Vantage software, HDD hybrid drive for 8 times faster speed than traditional HDD. In addition, smart SSDs can meet user needs and keep cached data for appropriate processing processes. Because there is no need to operate, the SSD saves power consumption and avoids component wear.

The S series is equipped with a wide trackpad with intelligent gesture recognition technology, supports a rich reception of 2-finger gestures to zoom in / out, rotate, scroll or 3 fingers to switch tasks. The keyboard uses the high-end assembly structure and stylish Chiclet keyboard design, for a more comfortable, comfortable typing experience.

Superior sound technology

Audio technology ASUS SonicMaster Lite provides better audio performance on each application, including music, movies or gaming. The sound is clear, powerful, impressive with high-end speaker system and improved audio processor.

There are also more: new generation K6 series notebook

Based on the same design standards and style as the S6 series, the new notebook models K6 will be the series for those looking for a high-performance computer, ultra-thin design and weak consideration. financial factor. K46 & K56 gives users great hard drive performance and utility of optical drive. At the same time, with extremely reasonable investment, consumers have more options to enjoy the maximum utility on their computers.
