

Asus introduces touch ultrabook for \$ 700

The Vivobook S301 has an optional AMD Radeon discrete graphics card and the ability to disassemble the lower part to replace more flexible hardware components than the Zenbook.

The Vivobook S301 has an optional AMD Radeon discrete graphics card and the ability to disassemble the lower part to replace more flexible hardware components than the Zenbook.

Asus Vivobook S301.

After launching Vivobook last year with 11.6, 14 and 15.6 inch models, Asus today continues to offer a new 13-inch version of the S301. The device possesses a touch feature that supports well for **Windows 8** and competitive price on ultrabook market from **700 USD** (equivalent to about **14.7 million**).

Because at a lower price than the Zenbook line, **Vivobook S301** has an incomplete shell from the alloy. The underside of the machine is plastic and can be easily disassembled to fully reveal the internal components. The *Ultrabookreview* page evaluates how easy it is to replace the hard drive, but it is quite difficult for RAM memory to be soldered to the motherboard.

S301 has 8 GB of RAM memory, optional 750 GB hard drive. It uses the latest Intel Core i3, i5 and Haswell processors. This is also one of the few 13-inch ultrabook models on the market that allows AMD Radeon discrete graphics card options.

S301 brings 13.3 inch screen resolution of 1,366x768 pixels, supports touch. The supplied battery has a capacity of 38 Whr which allows for use in about 4.5 hours. Machine weighing 1.7 kg.
