

ASUS to the Zenbook NX500 high-end laptop, 4K screen

If you think all laptops introduced at Computex 2014 have the same design as Lenovo's Yoga line, then you don't worry because ASUS has announced a traditional clamshell laptop for your choice.

If you think all laptops introduced at Computex 2014 have the same design as Lenovo's Yoga line, then you don't worry because ASUS has announced a traditional clamshell laptop for your choice.

The newly launched ASUS Zenbook NX500 is a 15.6-inch Ultrabook with a 4K resolution screen (3840x2160 pixels), Core i7 processor, NVIDIA GTX 850 discrete graphics card and up to 16GB RAM memory. Despite the high-end specs, the Zenbook NX500 retains its mobility with an aluminum chassis of only 19 mm thick and weighing only 2.2 kg.

With such specifications, the Zenbook NX500 will be a direct competitor to the MacBook Pro Retina screen. It is suitable for creative or moving professionals. In addition to high resolution, the NX500's screen is also supported by ASUS *VisualMaster* technology with color gamut covering 100% NTSC spectrum, and 108% Adobe RGB.

There is still no information about the price and timing of shelves of NX500, ASUS rarely disclose these details at press conferences to introduce products.
