

Attach files in Gmail without Internet

Google has just continued to improve its Gmail email service by allowing users to attach files to emails without concern about an Internet connection.

Google has just continued to improve its Gmail email service by allowing users to attach files to emails without concern about an Internet connection.

" From today you can attach files to emails before sending them regardless of whether you're offline or online, " programmer Andy Palay wrote in his blog on November 24.

" As long as you have enabled **offline** working in **Gmail** (working without an Internet connection), you will receive a notification that all messages have been transferred to the outbox, this will allow Gmail to receive attachments even if you lose your Internet suddenly '.

In fact, this is just a small improvement because Google does not need to change Gmail's algorithm, but it is an important step for the search firm on the way to make Gmail more competitive with the program. manage Microsoft Outlook email.

This is a signal that although Google is expanding aggressively into other areas such as mobile, operating system, programming languages ??, but they still do not neglect to " *take care* " of technologies and His usual service. Recently, Google has also added the ability to work offline for both its Google Docs and Google Calendar text editing services.

Google has used self-developed software called Gears to support its out-of-network tasks, but the standard HTML standard has been developed and replaced by the HTML 5 standard. build features similar to the name ' *internal storage* ' for your Chrome browser.
