

Autodesk free software for students worldwide

This means that students and schools can now use the famous Autodesk software like AutoCAD, Sketchbook, 3D Max, Maya ... completely free.

This means that students and schools can now use the famous Autodesk software like AutoCAD, Sketchbook, 3D Max, Maya . completely free.

Autodesk - a well-known American software development company recently announced a good news for students and teachers in the design industry. Accordingly, these users will be free of all Autodesk applications such as **AutoCAD , Sketchbook , 3D Max , Maya .**

If you are a student or teacher and want to submit a request to use Autodesk software, you can access **the educational page** of this software company.

The company's new policy will enable approximately 680 million students, from 800,000 schools in 188 countries, to have access to well-known design software without spending any money. Users only pay for some additional cloud services, but compared to the normal license fees that Autodesk sells to businesses, this is a great incentive for design students.

Of course, like other educational products, users must commit not to use the software for commercial purposes.

It can be said that this program of Autodesk is an extension of the ConnectED program in the US. ConnectED is a project launched by President Obama himself, in which he encourages businesses to create conditions for students to use new technologies for learning. Autodesk has responded to this program and they free their software for students in the US in early 2014, before opening a free round for students around the world today.
