

# Automatic Robomart will take the product to your door

Shopping fresh produce online is always a gambling game, because you don't really have to choose fruits and vegetables yourself. To change this, Santa Clara, the start-up company wants to bring online shopping products to your doorstep via an automatic Robomart.

Shopping fresh produce online is always a gambling game, because you don't really have to choose fruits and vegetables yourself. To change this, Santa Clara, the start-up company wants to bring online shopping products to your doorstep via an automatic Robomart.

This car works on AI platform, deep learning by NVIDIA, it is developed based on a set of self-propelled chassis with wheels. It is a transport vehicle with built-in radar and camera, as well as CAN motion control system and obstacle avoidance software that are enough to overcome automatic level 5 - the highest level that a car itself Drive can be achieved, does not require human intervention. Moreover, the fully charged car can travel 80 miles and the maximum speed of 25 miles per hour and is equipped with HEVO wireless charging system.

The car's storage area will be kept cold and provide a wide range of products. To use the service, shoppers will place the same car as car sharing services. When the car arrived, the buyer unlocked and opened the door, then took their goods. The system will pay any product taken out of the vehicle, then automatically print the invoice to the shopper and create an online receipt.

The company is currently waiting for California DMV automatic vehicle inspection license but is expected to receive this license soon and plans to launch a Gulf pilot program this summer.
