

Automatically delete temporary files every time a Windows 10 computer is opened

Whenever you create a file, a corresponding temporary file will also be created with the extension .TMP. Over time, temporary files will increasingly fill up and take up hard drive space on your computer. So you should clean up these temporary files to free up hard drive space, and to improve the performance of your Windows 10 computer.

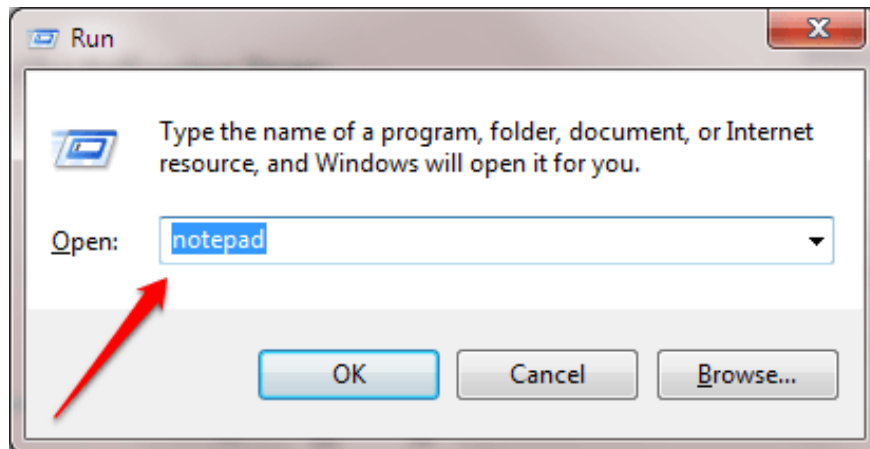

Whenever you create a file, a corresponding temporary file will also be created with the extension .TMP. Over time, temporary files will increasingly "fill up" and take up hard drive space on your computer. So you should "clean up" these temporary files to free up hard drive space, and to improve the performance of your Windows 10 computer.

To delete temporary files, you can use batch files or delete them manually.

Automatically delete temporary files every time Windows 10 computer is opened:

Step 1:

Open Notepad on your Windows 10 computer by pressing the **Windows + R** key combination to open the Run command window, then enter **Notepad** and that and press **Enter**.

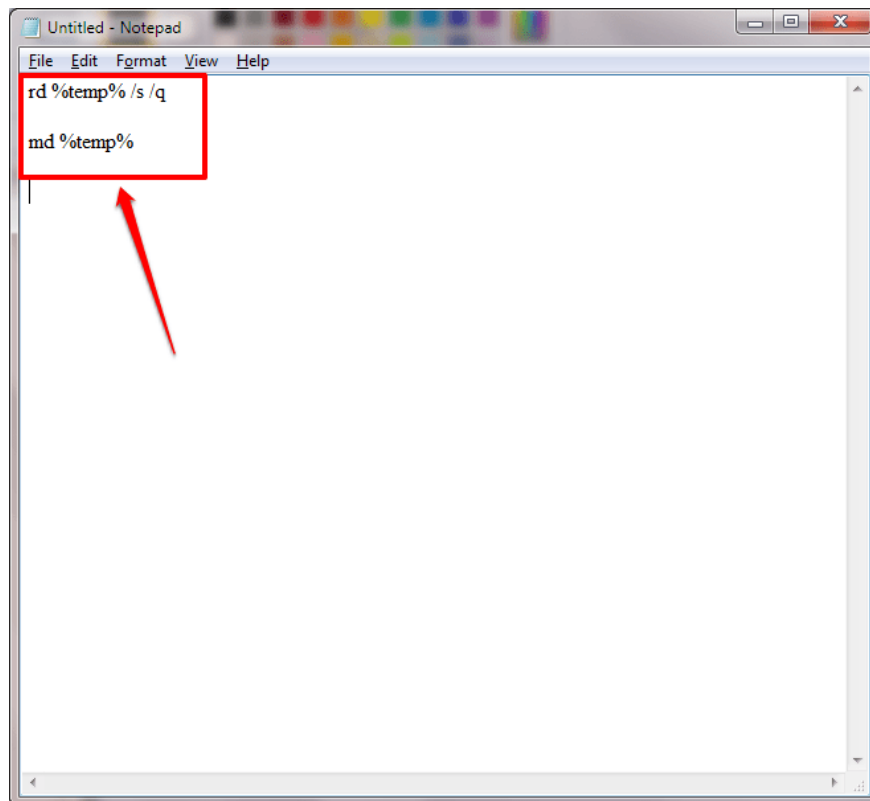

Step 2:

Copy and paste the code below into the Notepad file you just opened.

```
rd% temp% / s / q
```

```
md% temp%
```

Step 3:

The next step is to save the Notepad file again.

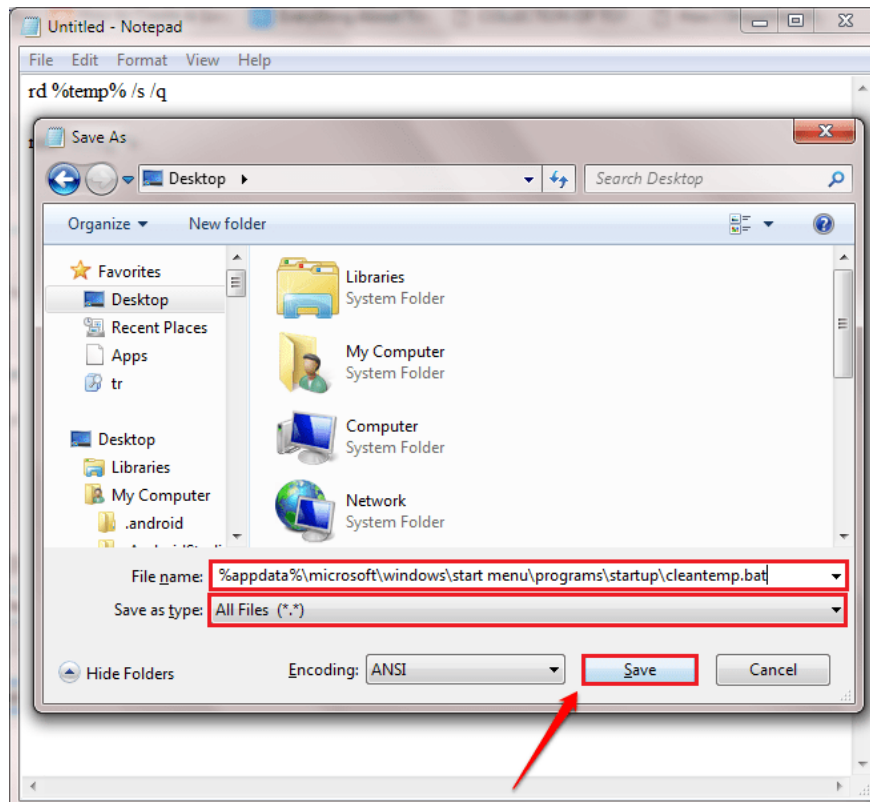

To save the Notepad file, press **Ctrl + S** or click the **File** tab in the top corner of the Notepad file, then select the **Save As** option. Now on the window that appears, Save As window, in the **Save as type section**, select **All types**.

In the File name section, copy and paste the link below into:

```
% appdata% microsoftwindowsstart menuprogramstartupcleantemp.bat
```

Name your Notepad file is **cleantemp.bat** . And you don't have to copy and paste the file into the Startup folder anymore. From now on when the system starts, the batch file will automatically delete temporary files (temporary files).

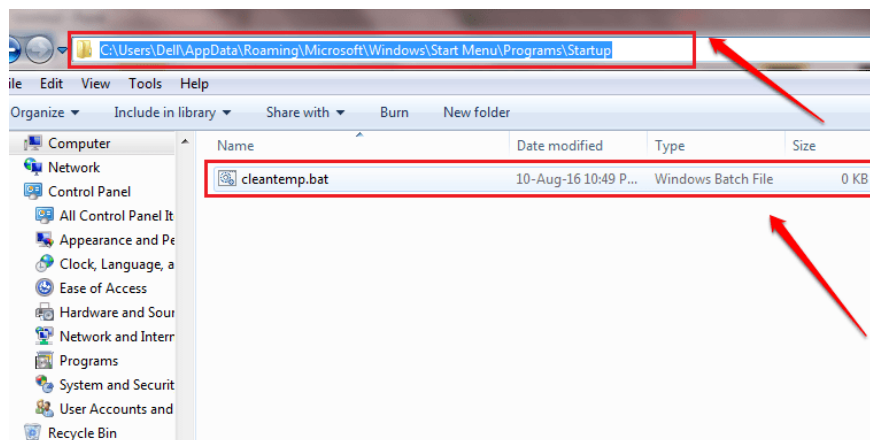

If the files are being used, the batch file cannot be deleted. In this case, you must close the processes running and run the batch file again.

Step 4:

If you want to delete this cleaner file from Startup, just copy and paste the following link into Windows File Explorer and delete the file:

`% appdata% microsoftwindowsstart menuprogramsstartup`
