TipsMake.com - Are you tired of receiving too much spam in your mailbox every day? Are measures actually used to help users avoid complexities? Outlook filters intrinsic Spam available on the system are not able to categorize emails as spam, so they do not really meet the needs of users . In the following article, we will introduce you a tool to support spam prevention in Outlook, that is Spam Reader.

This application provides users with the ability to classify spam emails according to various criteria, supports various protocols such as **POP, IMAP, Exchange, HTTP** . depending on the settings of users in **Outlook** . Technically, this type and blocking process is based on the **Bayesian** algorithm, primarily working on finding phrases, keywords, paths and special characters used by spammers and systems. Automatic email creation system is now popular. Besides, users can create separate **Blacklist** and **Whitelist** depending on needs.

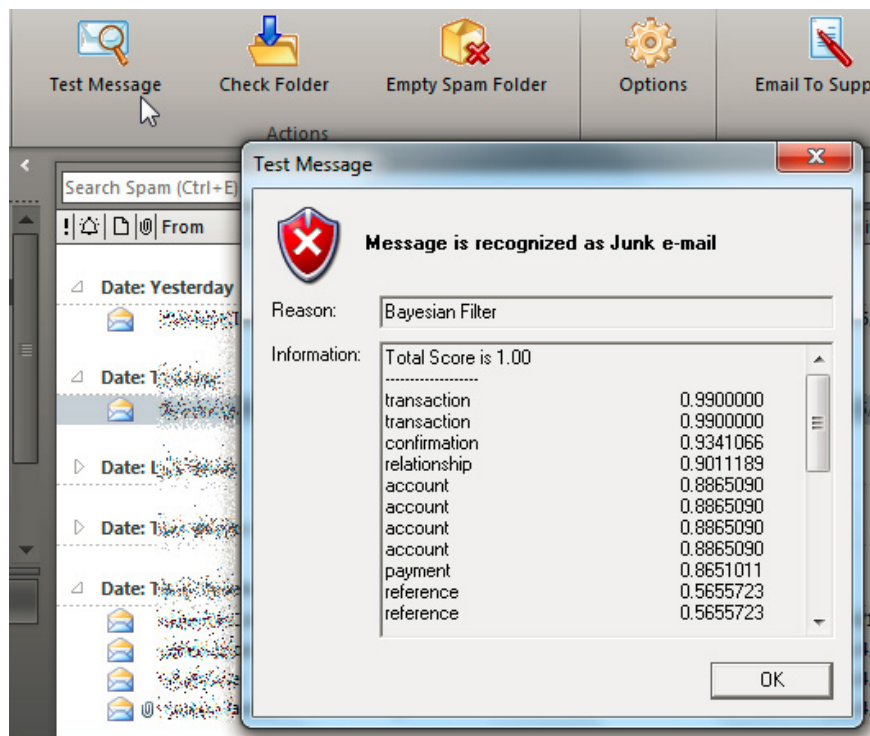

First, please visit here, download and install the latest version. When starting, the program will display 1 new tab **Spam Reader** on the main interface. And when opening **Outlook** , the application will automatically conduct the Inbox analysis process to find spam messages, and display warnings about the results found under the system tray:

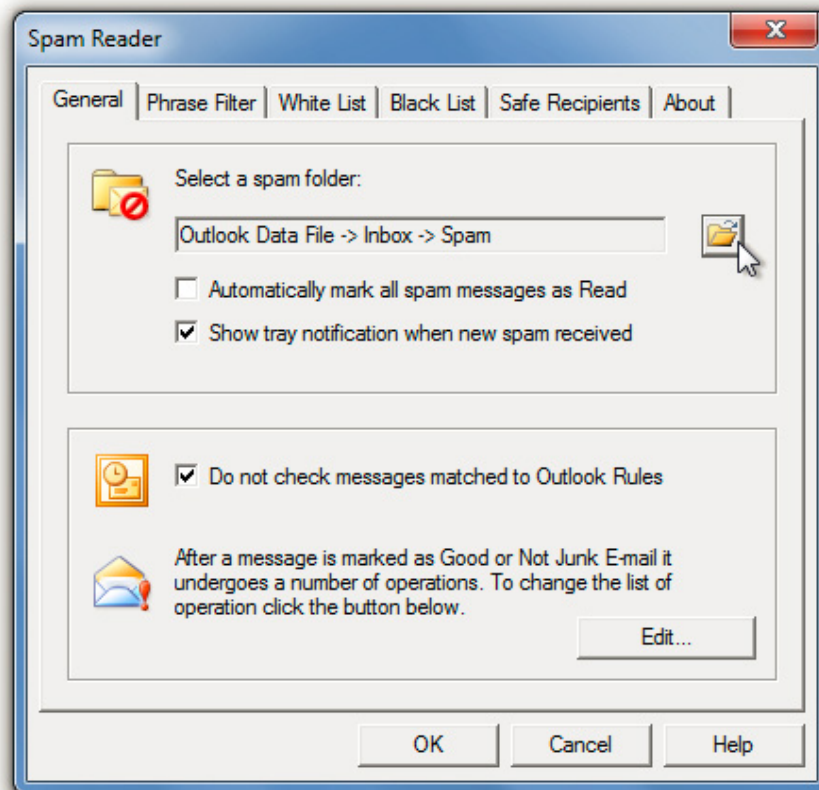

When this process is finished, open the **Spam Reader** tab, select the newly created **Spam** folder and mark normal **emails** as **good emails** , with the corresponding - **Marking** button next to it. Next to this default Inbox folder, you do the same with other folders:

The **Test Message** option will show why the emails are classified as **Spam** . Here, the program lists all the phrases, grammar, paths, and other components based on **Bayesian** 's filtering technology:

To delete these spam messages, people click **Delete Spam Folder** then proceed to review the folders. And in the **Options** section, you can change the default Spam setting folder along with some other properties such as automatic sorting mechanism, Desktop warning display . and a number of other options in the item. **Phrase Filter**.

And finally, the creation of **Blacklist** (for spammers) and corresponding **Whitelist** for true sender addresses or not. Currently, this utility works well with all versions of Outlook, and the latest is Microsoft Outlook 2010, 32 and 64 bit versions. Good luck!
