

## AVG announced the 2011 security suite

Yesterday September 28, AVG Technologies introduced its AVG 2011 security suite.

**Yesterday September 28, AVG Technologies introduced its AVG 2011 security suite. According to the manufacturer, this version will enhance the protection of web-based activities, social networks, the detection rate of malicious software is higher, work faster and more powerful.**

AVG provides LinkScanner real-time protection solution, allowing users to surf the web, search for information, shop at online stores, use email, join social networks . and still keep it safe. Full personal information.

LinkScanner automatically checks links and protection in real time, with exchange links on social networks like Facebook and MySpace. Without any hassle, this feature automatically activates and works.

AVG 2011 includes many improvements to make it easier to use. The installation and removal process has been simple to a minimum.

Good news for users of heavy multimedia applications, AVG 2011 has "Game Mode" mode. In this mode, the protection is still in progress, but there are no messages that interrupt multimedia applications full screen or

games. In addition, AVG 2011 also has the function of fixing errors of applications with just one click of the button "Fix It".

Another new feature in AVG 2011 is Smart Scanning. Accordingly, files that have been fully certified will be ignored, scanning unverified files to increase scanning speed. Also with this feature, AVG will determine which resources of the computer are being used, prioritize scanning resources in idle state, thereby helping your computer not be slowed in the scanning process.

AVG Internet Security 2011's 1-year license price starts at US \$ 54.99 and AVG Anti-Virus 2011 starts at US \$ 34.00.

Besides, the free version of AVG Antivirus Free Edition 2011 was also released simultaneously in this batch.
