

Backup and restore installed applications on Android using AppMonster.

Every time you switch to a new phone, you'll have to reinstall your favorite applications. You will have to search and download one by one on the Play store. However, you can avoid these troubles by installing the AppMoster application on your phone

Every time you switch to a new phone or restore your Android device's original settings, you'll have to reinstall your favorite apps. You will have to search and download one by one on the Play store. This can take hours and sometimes you can forget about one or two applications. However, you can avoid these troubles by installing the AppMoster application on your phone. AppMoster will back up all the applications you are using to the microSD card. And when you switch to a new phone, just install AppMoster and it will restore all used applications.

AppMonster is a backup and restore application for Android devices. When you open AppMonster you will see a list of installed applications in your phone, you can choose to back up each application individually or select multiple applications to backup at the same time. In addition, the application also has an automatic item, you just need to click and AppMonster will automatically back up old applications periodically and back up new applications when installing.

Information about the application in Appmonster

For each application that appears in the list, AppMonster will display some other useful information. For example, application A is a background application, always running underground in the system; Application B can switch to SD card to save the phone's internal storage space.

In AppMonster's settings, you can choose to notify when the app supports App2SD; or when a backup is successful. You can also choose the largest application size that allows backup. This setting prevents backing up large applications, which can take up a lot of space on a microSD card.

Options of AppMonster application

Summary: If you use a new phone or if you perform a phone reset, AppMonster is a great option to save you time reinstalling all your favorite apps by backing up to a microSD card and restoring on new device.
