

Be sure to download what you intend to download

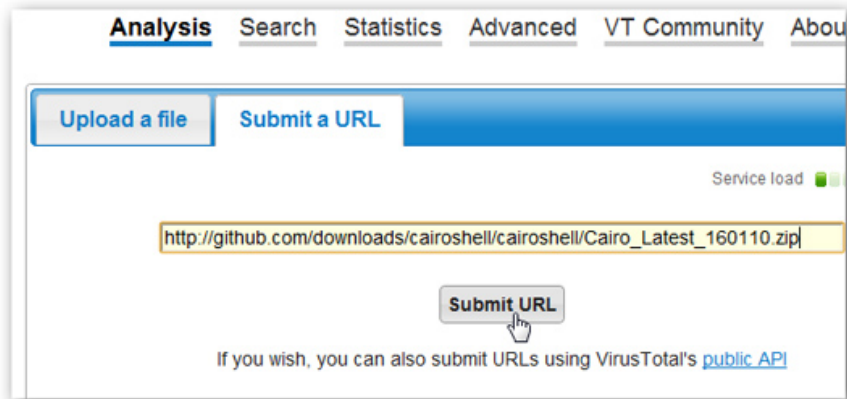

QuanTriMang.com - Are you always worried about downloading any file from the Internet to your computer? Users will not be sure they are downloading good or bad applications on the system?

QuanTriMang.com - Are you always worried about downloading any file from the Internet to your computer? Users will not be sure they are downloading good or bad applications on the system? How can people identify and avoid these hazards? When applying this method, it only applies to files downloaded to your computer, you want to be more certain? Please use VirusTotal online service.

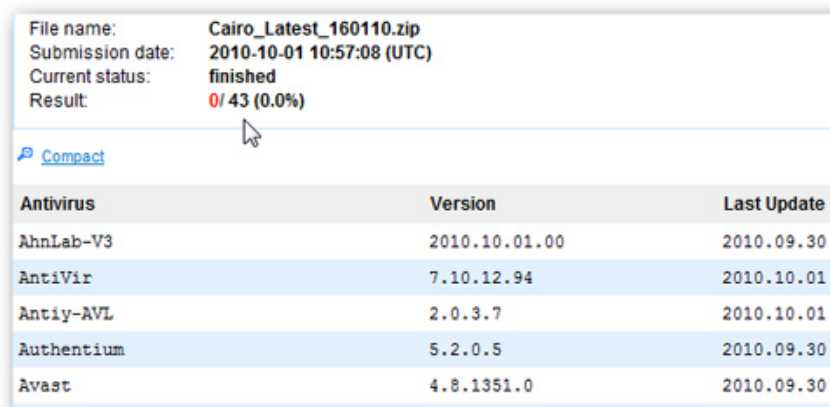

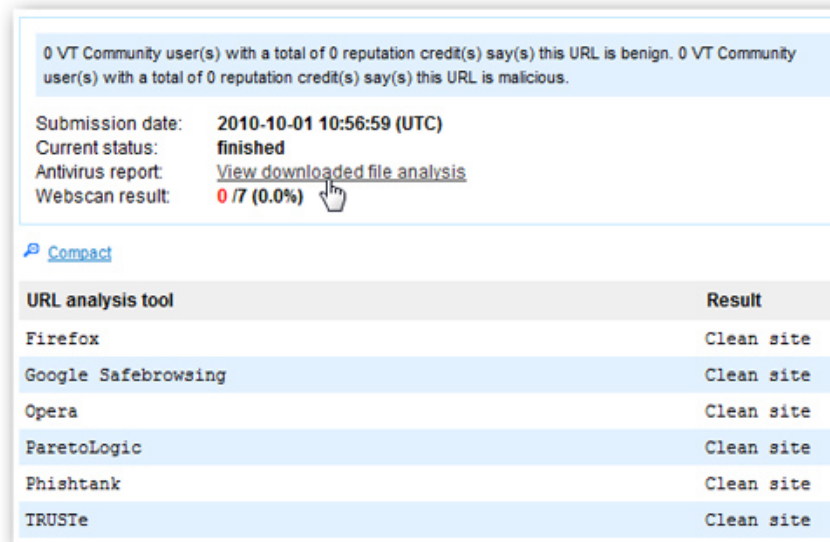

With more than 40 security tools combined by different brands, VirusTotal can be considered the best online security service today. When you want to check the status of any path, copy that URL:

and paste it into the *Submit a URL* tag of VirusTotal.com, then click the *Submit URL* button :

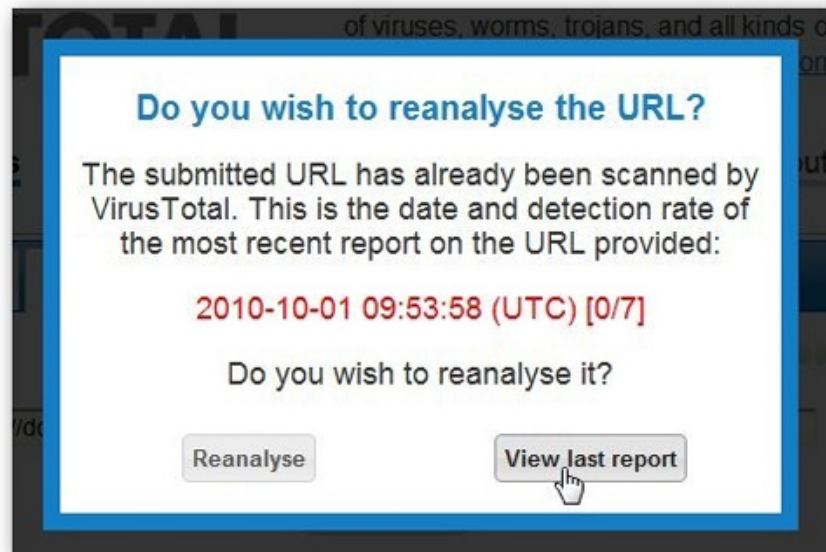

VirusTotal will analyze, screen and classify safety and dangerous signals collected from different tools. If the first result is safe, but you are still unsure, select the *View download file analysis* link above:

The corresponding test results from the tools will be different, there are some cases where confusion will occur. You should pay attention to the results of popular programs like Kaspersky, BitDefender, Avira . if it is safe, be assured of the results obtained:

GData	21	2010.09.29	-
Ikarus	T3.1.1.90.0	2010.09.29	-
Jiangmin	13.0.900	2010.09.29	Backdoor/Poison.krb
K7AntiVirus	9.63.2628	2010.09.28	-
Kaspersky	7.0.0.125	2010.09.29	-

Besides, VirusTotal also displays a notification to the user that the URL or file has been scanned. You can select **Reanalyze** - re-analysis or View last report to view the report details:

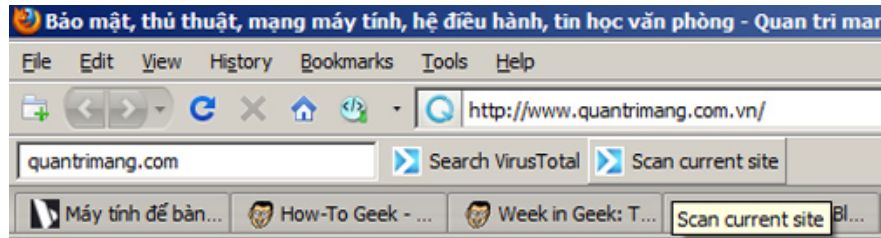

Integrate VirusTotal with Firefox

If you are using Firefox, the plugin VTZilla is a gadget not to be missed with many simple and very effective features:

After installation is complete, you will see the VirusTotal toolbar in Firefox. Users can type the direct address or hash file into the search box to check with VirusTotal, or click **S can current site** to make sure those addresses do not contain malicious code or other malicious software. If you do not want to use this toolbar, simply click on the toolbar and uncheck the check box at the VirusTotal Toolbar line:

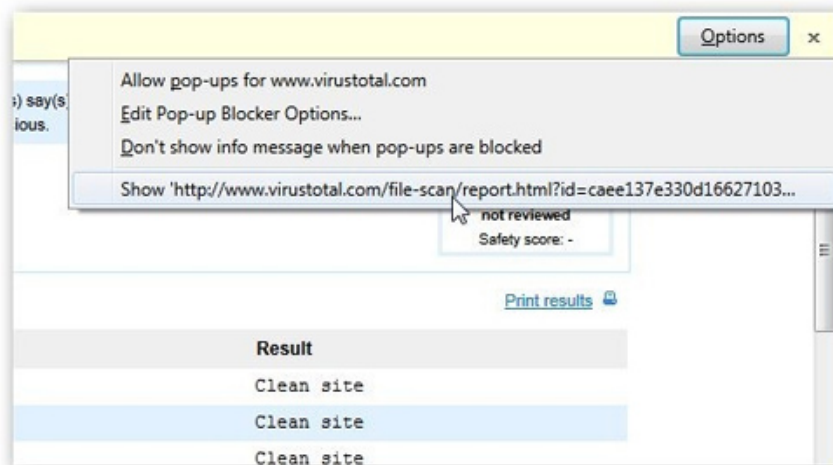

Picture 9 of Be sure to download what you intend to download

And one of the most convenient functions is scanning URLs with a single click, just select the link to check, right-click and select **Scan with VirusTotal** :

Picture 10 of Be sure to download what you intend to download

VirusTotal will open 1 new tab and conduct analysis, check that URL, and the program will open a popup window to analyze the relevant files themselves:

VirusTotal is a **service that analyzes suspicious files and URLs** and facilitates the quick detection of viruses, worms, trojans, and all kinds of malware detected by antivirus engines. [More information...](#)
