

Bento Book Ideas 'all in one'

Bento Book is the idea of an 'all-in-one' device, including laptops, tablets, smartphones. With a size of only 15mm thin, Bento Book is used as a stand for all accompanying devices.

Bento Book is the idea of an 'all-in-one' device, including laptops, tablets, smartphones. With a size of only 15mm thin, Bento Book is used as a stand for all accompanying devices.

The Bento idea is quite interesting with the design of a laptop that can turn into a base for smartphones or tablets, allowing users to simultaneously use multiple devices at the same time without syncing.

The uniqueness of BentoBook lies in the idea that when not connected to mobile devices, the Bento is just like a dock. But when connecting to a smartphone or tablet, this concept turns into a laptop.

Bento Book is designed by Mr. René Woo-Ram Lee, based on Fujitsu award-winning design ideas. The main laptop has a 15-inch OLED display, inside an 11-inch tablet is located near the keypad keypad; Meanwhile, the 4-inch smartphone is next to the trackpad.

There is no information on whether this concept will be turned into a commercial product.
