

Bing updates the search suggestion feature similar to Google

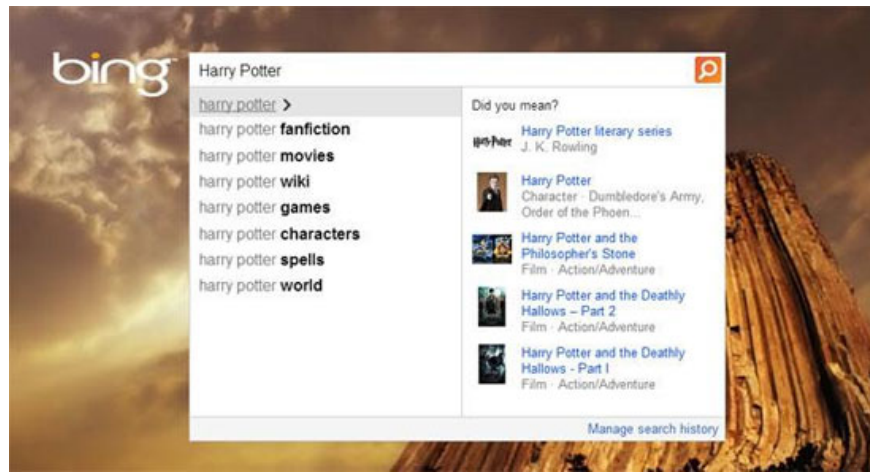

The Bing search engine has recently updated the search results hint feature to help users remove false results by introducing a number of options. This function is highly appreciated by users because it helps them reduce search time and filter results.

The feature that helps Microsoft's search engine shorten the gap with rival Google.

The Bing search engine has recently updated the search results hint feature to help users remove false results by introducing a number of options. This function is highly appreciated by users because it helps them reduce search time and filter results.

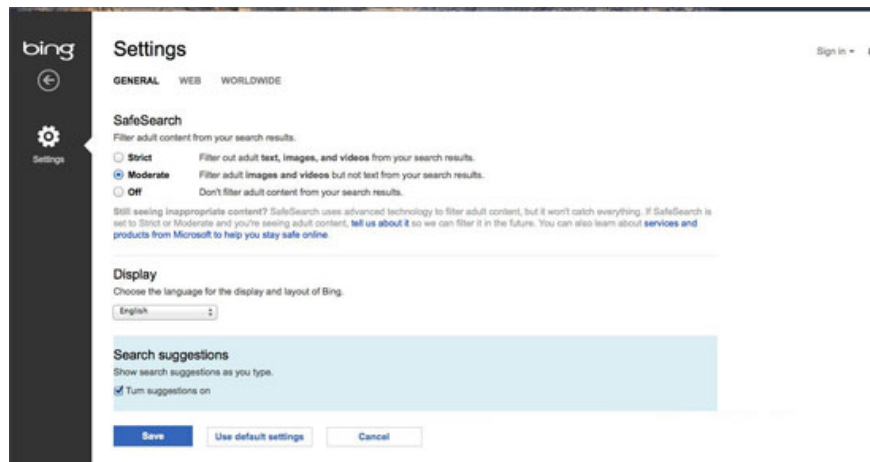

An example of a search on Bing about Harry Potter, the site will introduce users to search options such as movies, characters or original story works. Evaluating after trial, the Bing hint function is intuitive and provides more information than rival Google.

Update Bing type of autosuggest, gussies up your vague search parameters

Bing's search suggestion function also allows users to customize some settings, which cannot be done with other search engines.

On June 1, 2009, *Bing.com*, Microsoft's new search engine was officially opened and replaced **Live Search**. Obviously, the birth of Bing at the time that Google was dominating, along with the miserable failure of Live Search senior has made people skeptical about its future. Released for a long time, Bing is now completely blurred by Google, which could be seen as a step to help Microsoft close the gap with its rivals.
