

# Block websites with the Blocksite add-on in Firefox

Block websites with the Add-on Blocksite add-on in Firefox - There are some websites that you don't want to access on your computer, but many users of your computer still visit them.

You install Firefox as the default browser of your computer, you often use it to surf the web. There are some websites you don't want to access on your computer, but many people use your computer to visit them. So you want to block some websites, not allowing access on Firefox.

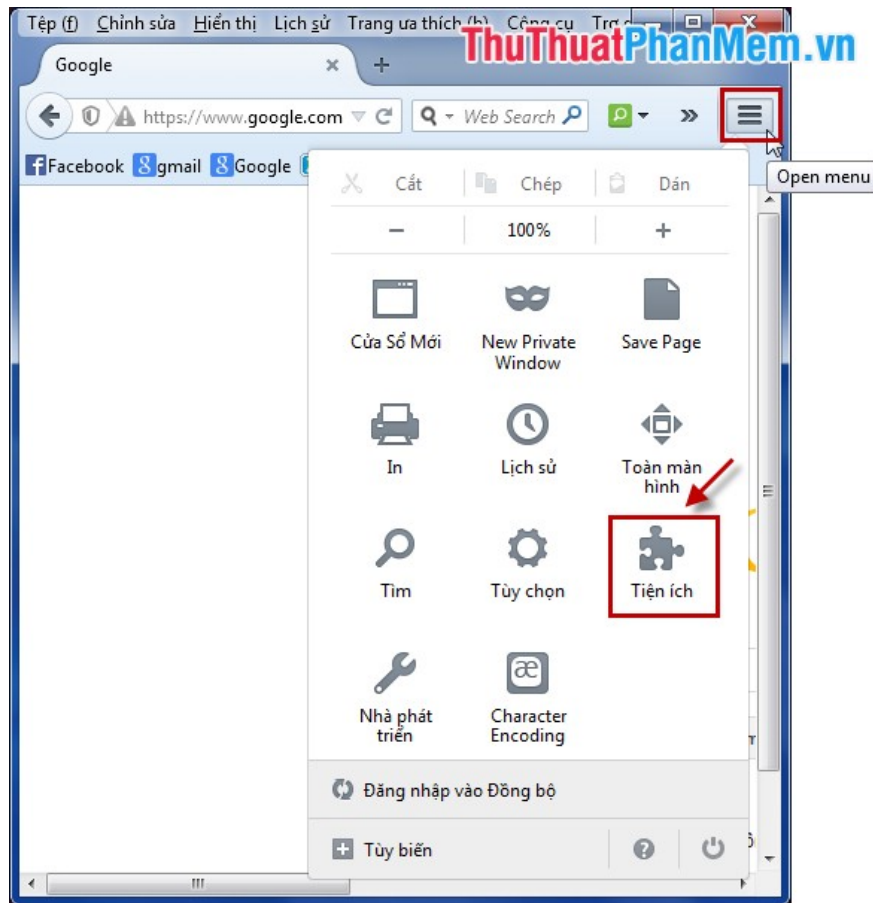

To do this you need to use the Firefox add-ons, Blocksite. The following article will guide you how to block any website on Firefox with the Blocksite utility.

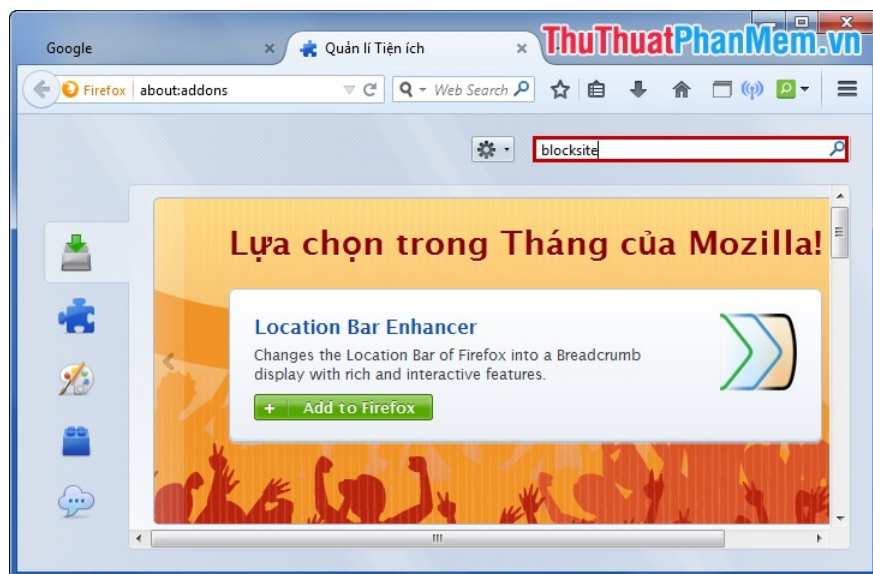

**Step 1:** Open Firefox, select **Tools** -> **Add-ons** ( **Ctrl** + **Shift** + **A** ).

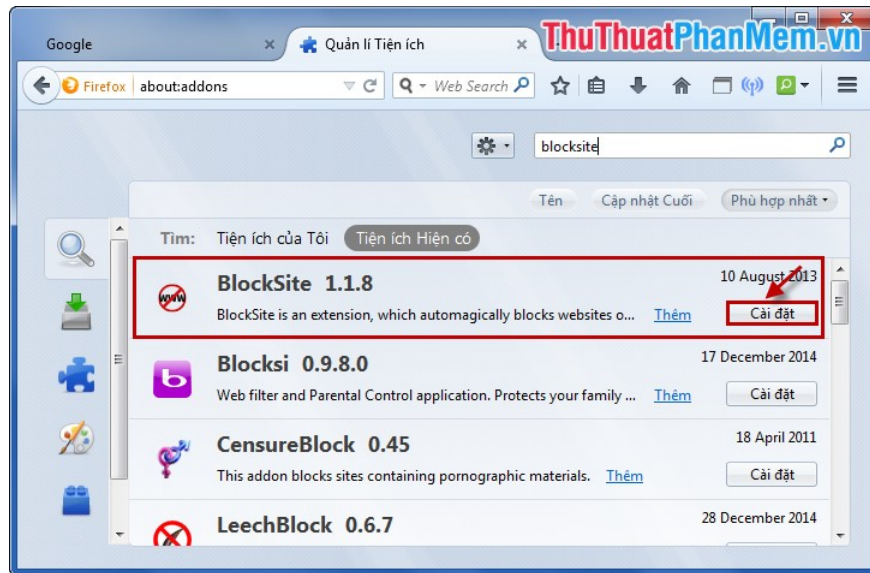

Or you can choose the **Open Menu** icon (3 dashes) and select **Utilities** .

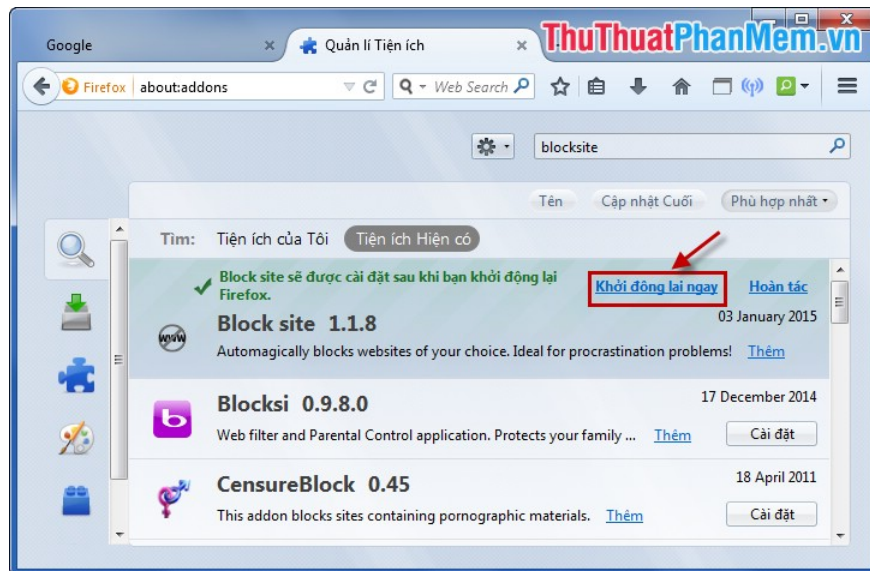

**Step 2:** In the search box for utilities on the upper right, enter the keyword *blocksite* and press **Enter** to search.

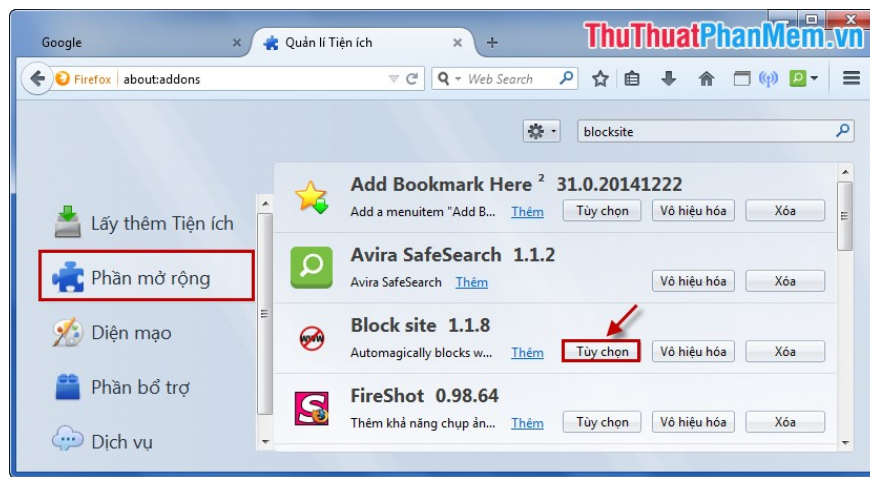

**Step 3:** The list of found utilities is listed in the list below, you choose **Install** in the blocksite utility.

After installation is completed, a message appears to restart Firefox, select **Restart now** to restart Firefox.

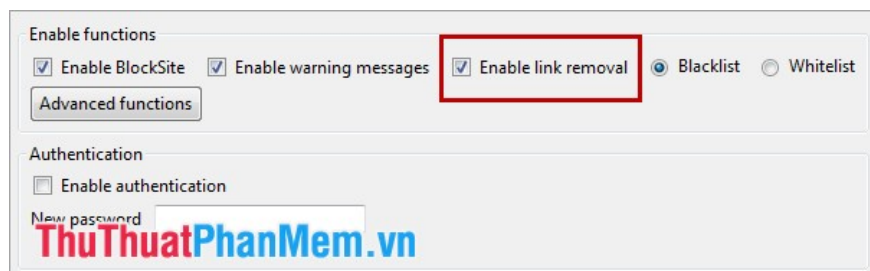

**Step 4:** After the boot process is complete, select **Extensions** in the left menu of the **Utility** and select the Block site's **Options** .

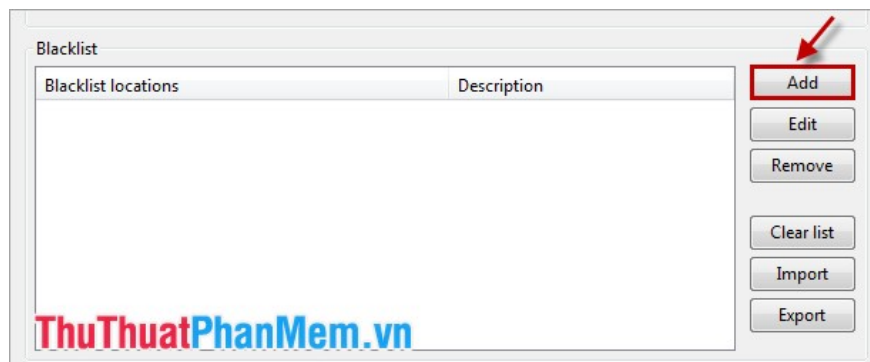

**Step 5:** Customize settings for Block site.

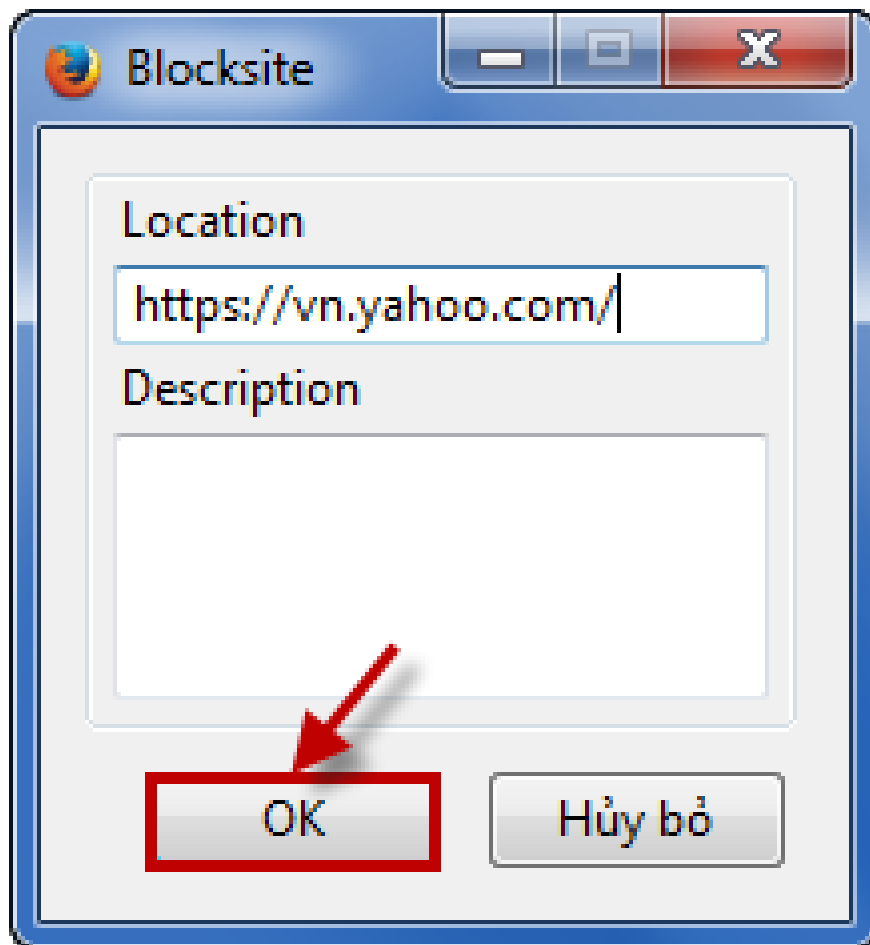

- Check the box before *Enable link removal* .

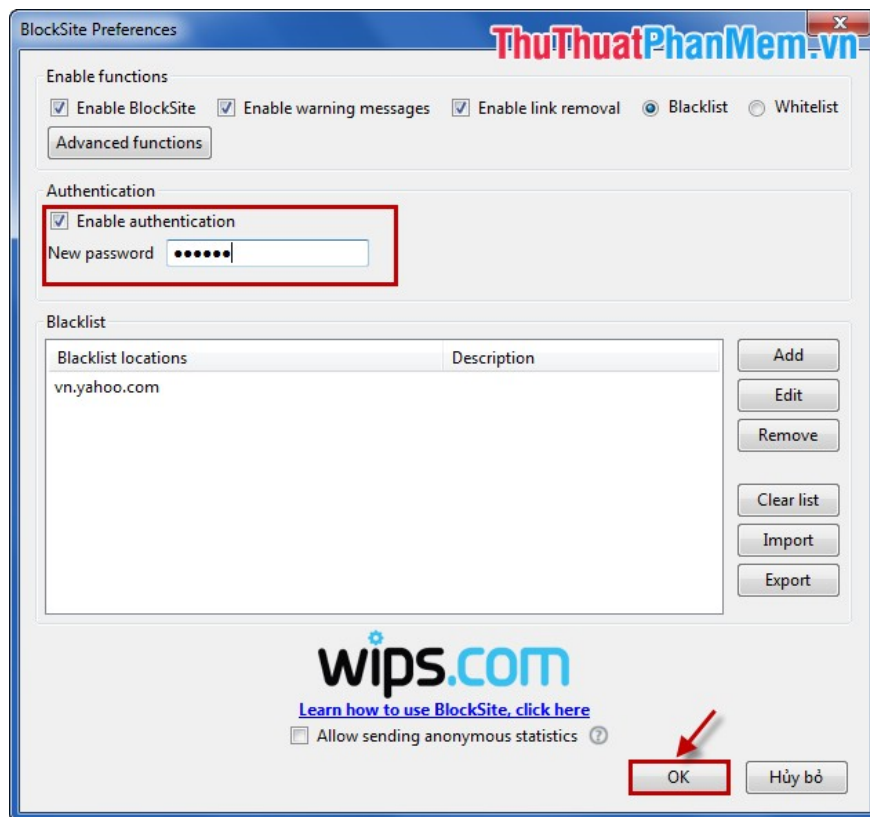

- Click **Add** to add the website address you want to block access.

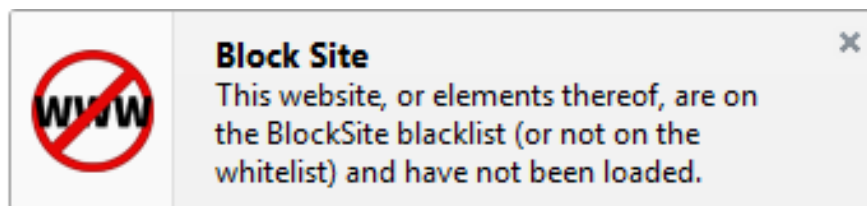

- In Block site you enter the path address into the **Location** , add a description to the **Description** . Then click **OK** .

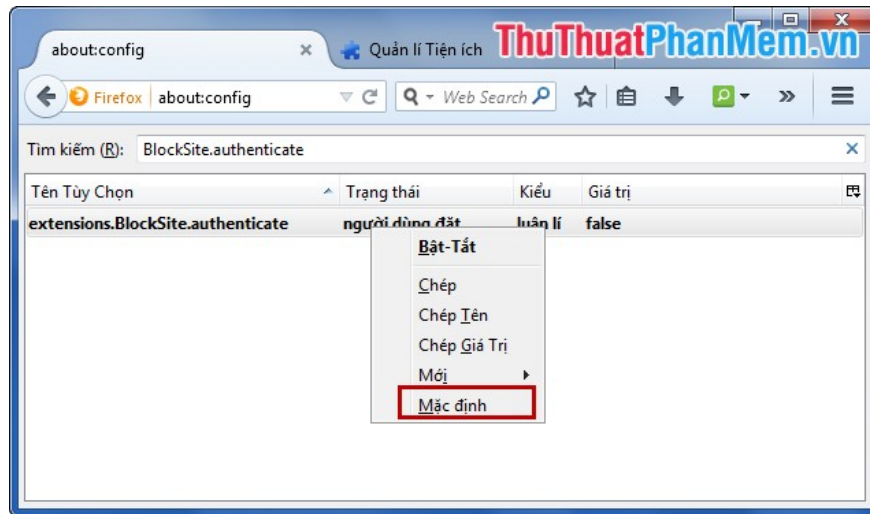

- In addition, you can set a password for the site you just blocked, so that others cannot delete the site you just added to the site block. Check the box before *Enable authentication* and enter the password in the **New Password** box . After setup is complete you select **OK** to save.

From now on you cannot access the websites you have blocked on Firefox, when you click on the website link you will receive a notification and no access.

Also, if you forgot the password in the site block, enter *about: config* in the address box on Firefox and navigate to *BlockSite.authenticate*, right-click the option and select **Default (Reset)** to remove the password.

Now you can block websites that you don't want to be accessed on your computer's Firefox. Good luck!
