Features of BlueStacks

Friendly integration

Bluestacks integrates mouse, camera, microphone, sensors, everything. Bluestacks makes it easier to use Android apps on Windows devices. These integrations are especially mandatory for gaming purposes.

Developer friendly

If you are an Android developer who wants to test the performance of your developed Android app, you can do this using Bluestacks. It has a developer test support mode that helps complete the test smoothly.

Gamer-friendly

Players can now livestream their games to Twitch or Facebook directly using Bluestacks without having to go through any complicated process.

Quick update

As soon as Bluestacks proved successful, the company released subsequent versions of BlueStacks. These are improved and updated versions for Bluestacks, with additional features.

Similar to Android devices

The home screen of Bluestacks App Player resembles the home screen of an Android device. It has a similar menu and icons. Whenever an app installs, its icon appears on the Bluestacks home screen.

Install the application easily

There are two different methods to install apps on Bluestacks. First, directly download it using Google Play Store. Second, download the APK of the app and then install it using Bluestacks.

Encourage best performance

If you are planning to use BlueStacks, the article recommends that you familiarize yourself with the settings. There are two reasons for this. Firstly, since the games available on Bluestacks are mobile games, not all of them are designed to be used with a keyboard and mouse. By checking the settings you will see all the options available to improve interaction with the game - open **Advanced Game Controls** (keyboard icon on the right) to see what is offered to you.

Another reason why you might want to check the settings is because BlueStacks is very slow. A few were played during testing and the games ran smoothly, but opening games, searching and changing tabs were all quite slow. Other users have reported that other PC operations may slow down when using BlueStacks. Either way, the app offers tips to speed up BlueStacks, and the article advises you to pay attention!

Only for diehard Android fans

If you have decided to play Android games on your PC, BlueStacks is not a bad choice. The app has improved a lot over the past few years, and if you can get past the speed issues, BlueStacks does a great job of porting Android games to your computer. Whether BlueStacks is better for you than competitors like Nox App Player and KOPLAYER probably depends on the game you're playing (each has its specific pros and cons), so check them all out. both and make the best choice.

Bluestacks statistical data

According to statistics obtained from various sources, it is estimated that nearly 96% of applications available for Android devices are compatible with Bluestacks.

About 86% of games available for Android devices can be played using Bluestacks, more than any other Android emulator.

Bluestacks has features that not many Android emulators can provide to users. Additionally, it has a great help community. Those looking for any help can certainly find the answer to their problem on the forum.

Bluestack developers constantly try to update the application according to user needs. Therefore, they continuously release updates to make some small changes or to remove bugs from the previous update.
