

Bose sued Beats for noise-related violations on headphones

According to information from CNBC, the recent Bose Corporation audio group has officially filed a lawsuit against Beats Electronics to US courts for violations involving noise cancellation technology on headphones.

According to information from CNBC, the recent Bose Corporation audio group has officially filed a lawsuit against Beats Electronics to US courts for violations involving noise cancellation technology on headphones.

In his lawsuit, Bose pointed out that Beats illegally used noise-canceling technology on the *Beats Studio headphone line*, including the latest *Beats Studio Wireless Bluetooth headphone line*.

Bose also said that anti-noise technology is an extremely important part for the whole group, that is the technology has been spent nearly 50 years to invest, research, test and develop, which later The company has put this feature on the line of extremely famous *headphones*, *QuietComfort headphone*. For this reason, Bose insists that Beats' use of noise-canceling technology on its Beats Studio line of headphones is unacceptable, especially when Bose sales can be severely affected.

It is known that Bose is trying to convince the court that Beats' behavior is " *intentional* ", and Bose also wants the court to ask Beats to provide the entire business situation, sales, profits from the sale. Beats Studio line of headphones. Bose also wants the court to issue a global ban on devices that violate its patents, as well as the

commensurate compensation from Beats.

Currently *Beats Electronics* has been acquired by Apple for \$ 3 billion. Thus, if this lawsuit goes further, it is likely that Apple will be responsible for what Beats violates.
