

Bring Windows XP in USB with Mojopack

Mojopack is a software capable of providing you with a Windows XP interface with the ability to install necessary programs.

Assuming you encounter a situation where you have to go to a cafe with an Internet connection to do something that is quite urgent because your home's Internet connection has a problem. At that time, definitely in the cafe, you won't have enough pre-installed programs like your home computer to perform some tasks. If you need only 2 or 3 expansion programs, you can use the portable version of these software, usually provided at Portable Apps.com. However, to use multiple programs with the Windows XP environment, our suggestion for you now is to use **Mojopack**. This is a software capable of providing you with a Windows XP interface along with the ability to install necessary programs. You can install many programs in this software and can be accessed from any computer.

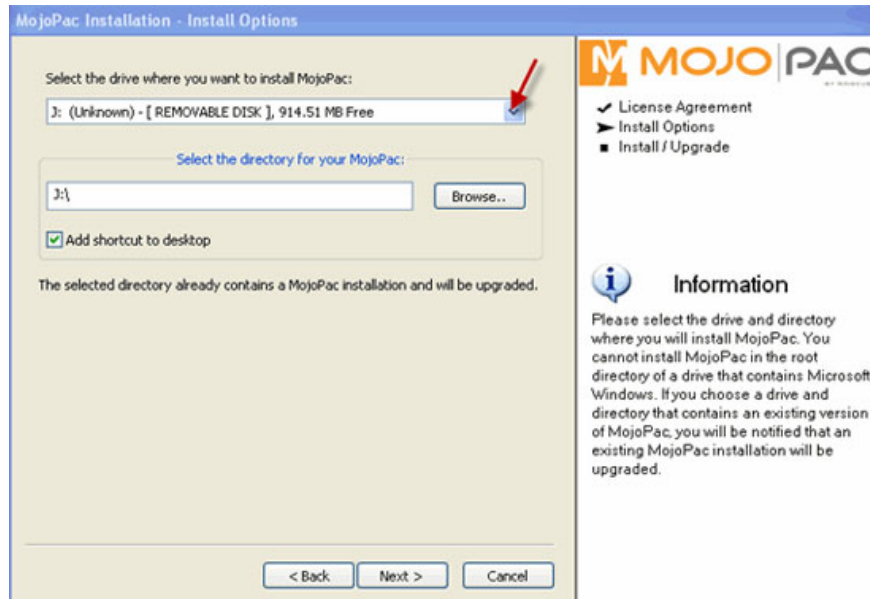

Mojopack will be installed on a USB drive but it will use all existing Windows XP resources. That is why you cannot access Mojopack in Windows Vista or Linux interface. There is only one drawback of this software that is the closing time and opening time quite long. You can use the iPod, portable drives, mobile phones that support USB, digital cameras to install Mojopack. Also any USB device can be used.

Here is an introduction video about Mojopack.

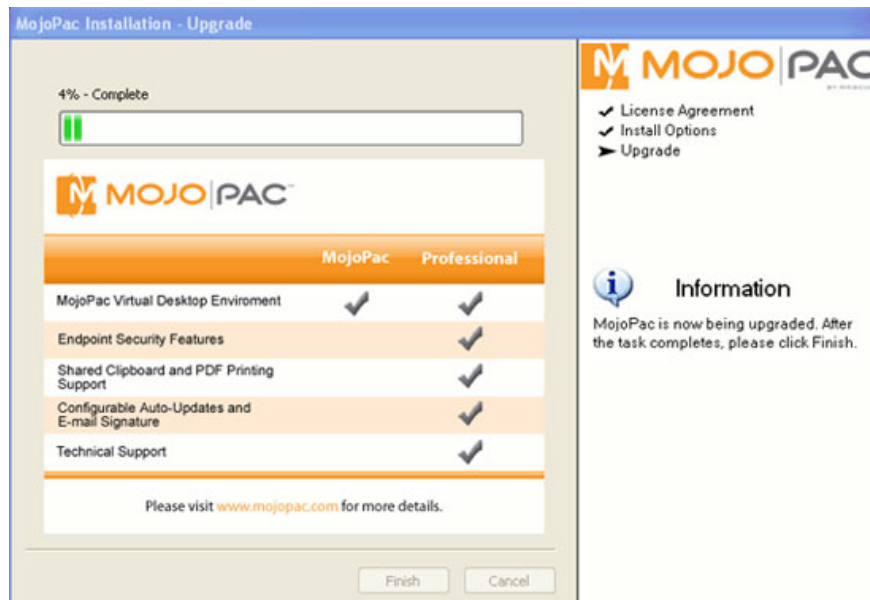

Procedures for installing Mojopack

Download Mojopack here and install it in your USB drive. When installing, the program will ask you about the installation location. Just click on the **select** section, and select the USB drive from the drop-down list. Then

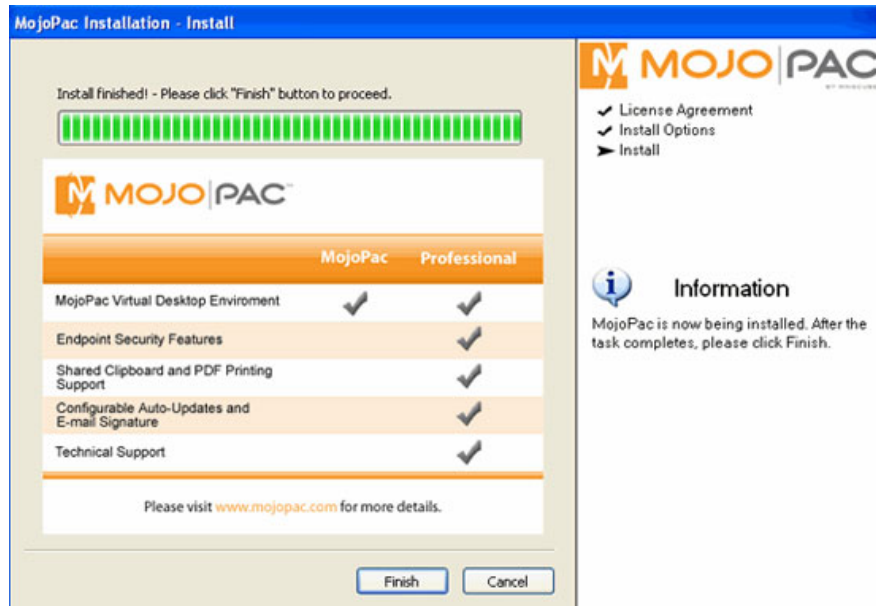

click 'Next' to continue.

Now Mojopack will be installed in your USB drive and the installation will take a few minutes.

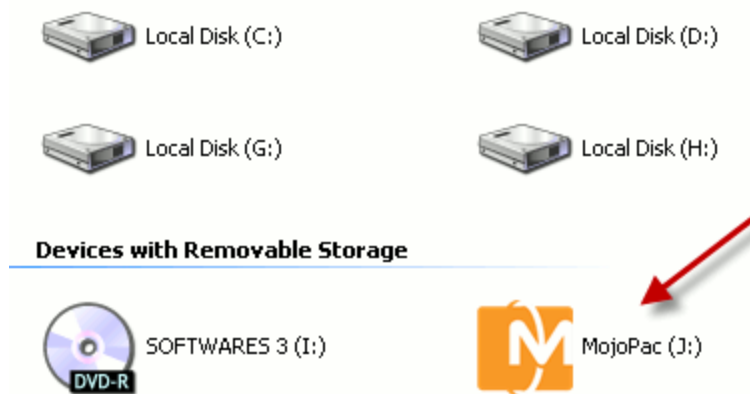

After the installation is complete, click the 'Finish' button. The software will now run automatically and it will configure the default settings within a few minutes. The first time you open the program you will see for a long time. Then the program will access all supported files from your USB, so do not unplug the USB at this time.

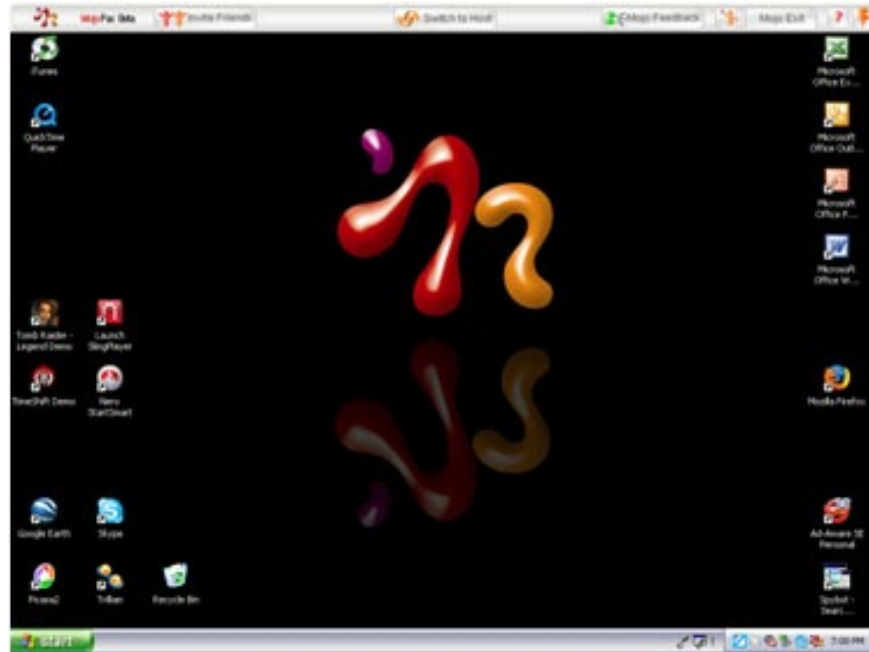

After initial initialization, the Mojopack operating system will run and provide you with an interface similar to the Windows XP operating system. You can install the necessary software for yourself like Microsoft Office, Nero 8, VLC media player, . from here. In addition to these essential programs you can also install the game. The installation files will be kept safely in the USB, where the operating system is preinstalled. Now you have finished your work and can take your USB drive anywhere.

When you need to use it, just plug in the USB and observe that your USB icon has changed to the Mojopack icon. Double-click it to run this operating system.

Desktop Mojopack will appear in a rather fancy interface. Do not be too time consuming and start with your work from here. You need to have a Windows XP environment to run Mojopack because it uses some Windows files as resources.

The important applications provided by Mojopack are desktop icons, Start menu, internet explorer, background images and documents. When you install the program, it will be added to the Mojo-control Panel. Above the Mojopack window you will see Mojobar, this is where you can switch between server and client.
