

## Bulk photo stamp with XnConvert

To avoid copying images in articles, you are trying to insert logos, symbols or characters ... into a series of photos included in an article. Or simply edit the image size, rename images in batch.

To avoid copying images in articles, you are trying to insert logos, symbols or characters . into a series of photos included in an article. Or simply edit the image size, rename images in batch.

XnConvert software will help you do that, completely free software also offers great features. To understand more about using and features of XnConvert, you can refer to the article below.

XnConvert supports currently used image formats: JPG, PNG, TIFF, GIF, JPEG . With a simple, easy-to-use interface that allows you to add one or a series of image files and folders, rotate, crop, resize photos in batch quickly.

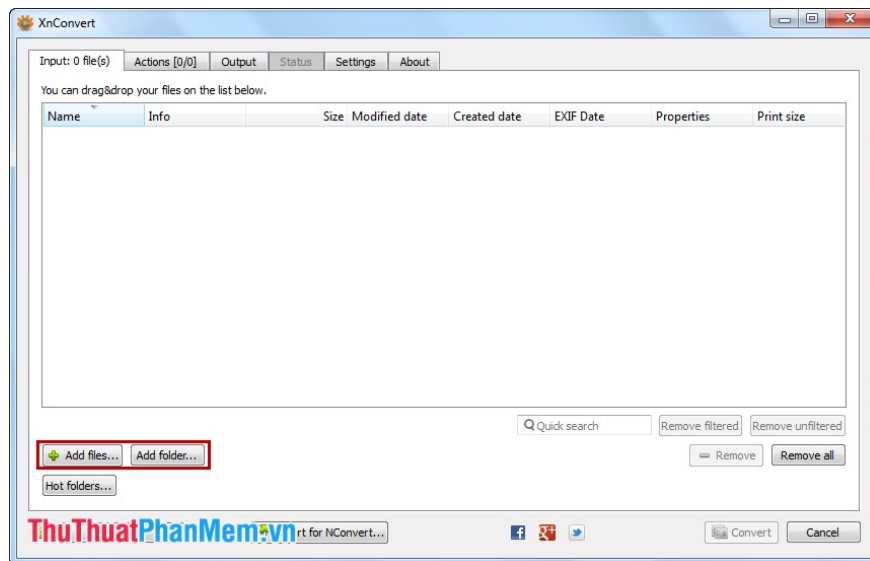

**Instruction for using XnConvert software:**

**Step 1:** First you need to download and install the software.

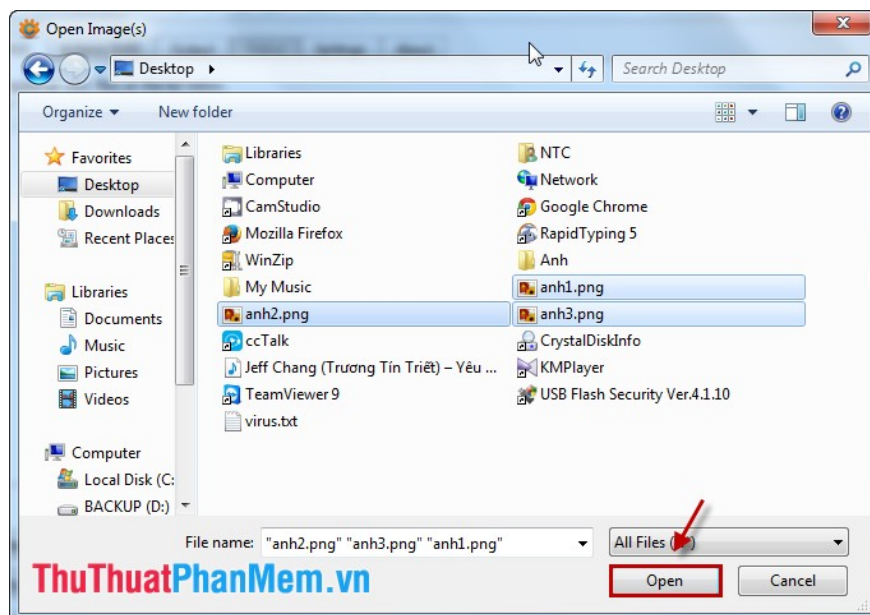

You can download it on the homepage: <http://www.xnview.com/en/xnconvert/#downloads>.

**Step 2:** Add photos or the entire folder containing images.

At the interface of the program you choose **Add files** to add images or select **Add folder** to add image folders.

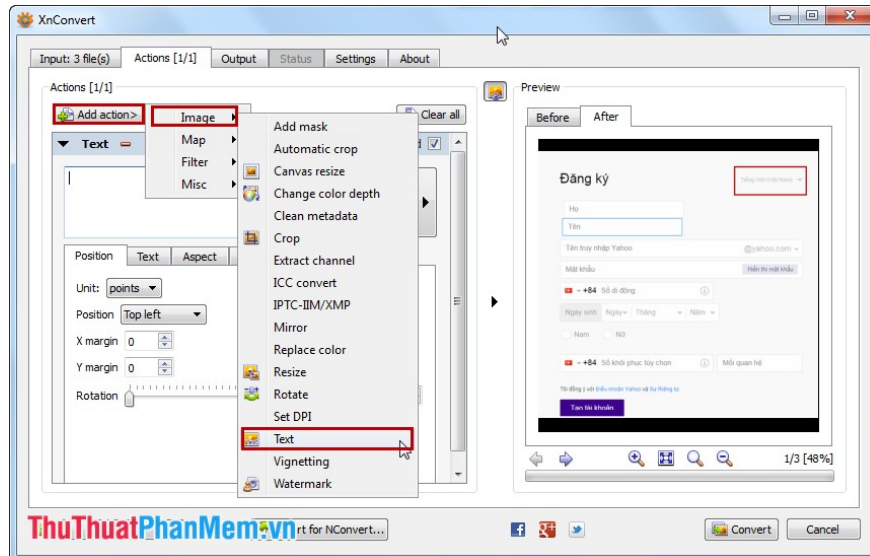

Then you find the files or folders containing images and click **Open** .

**Step 3:** Choose photo stamp activities.

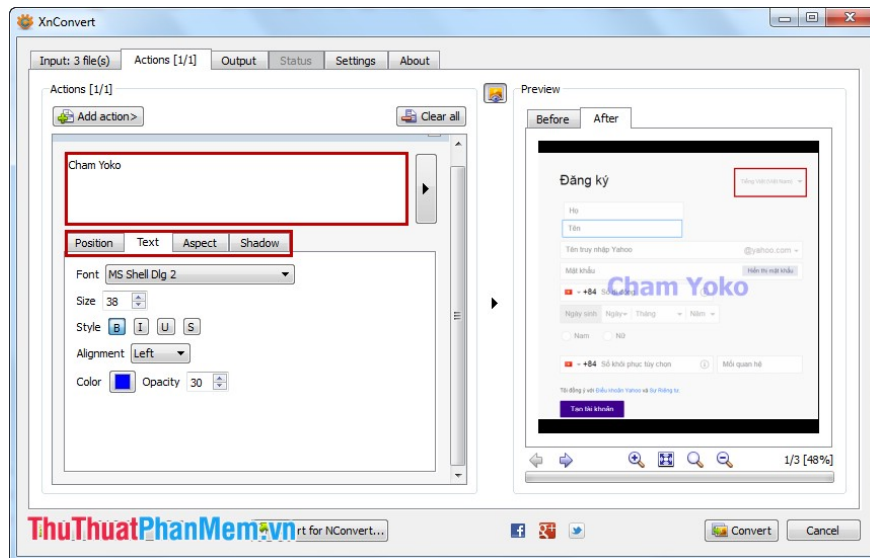

Go to the **Actions** tab -> **Add Action** -> **Images** -> **Text** .

Or you can choose other features in Actions according to your requirements and uses.

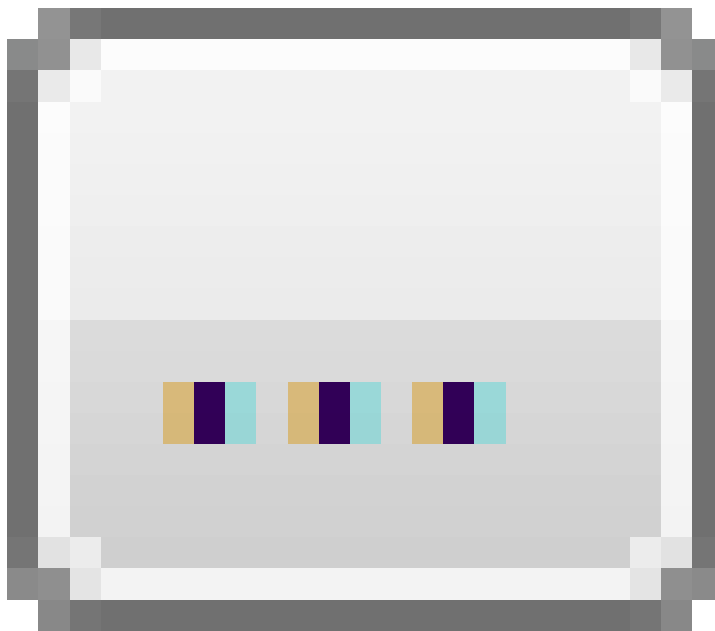

Then you enter the text you want to insert on all the images selected in the **Text** box .

You can customize as you like at the tabs **Position** (position inserted on the image), **Text** (font style, font size, font style, alignment, font color), **Aspect** (border, fill color background text), **Shadow** (shadow text).

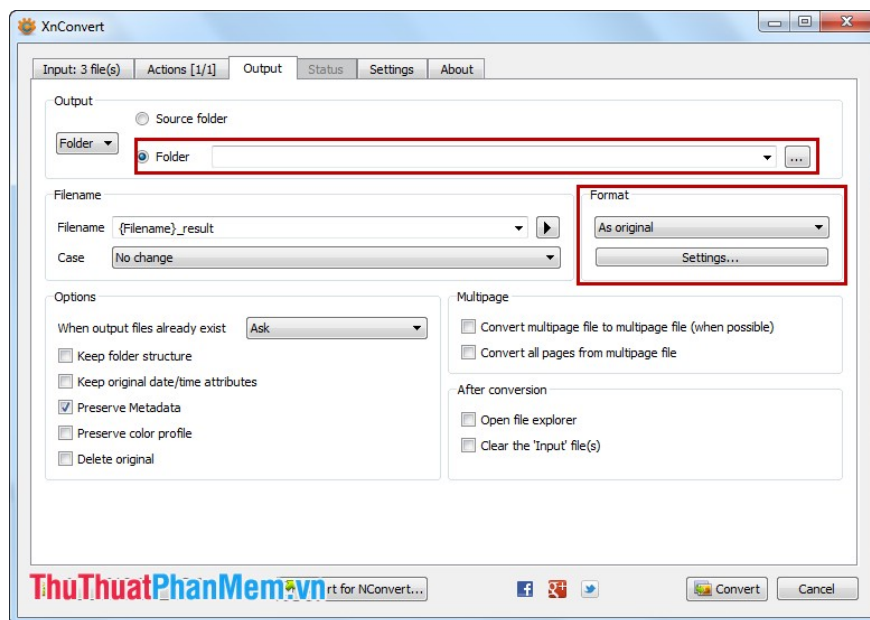

**Step 4:** Set the output for photos after stamped photos.

In the **Output** tab , select the path to save the image in the **Folder and** click the **Browser** button icon

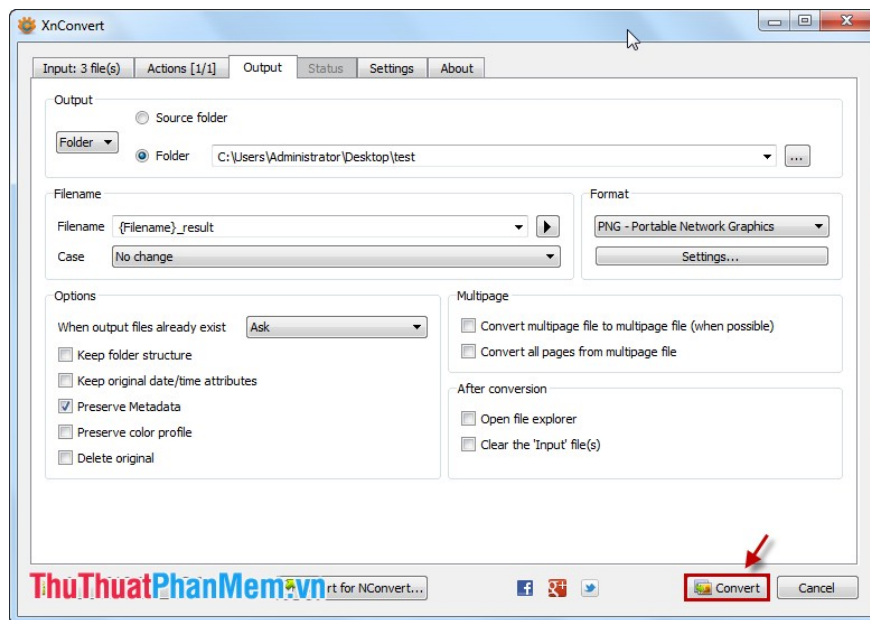

You can choose the output format and image quality settings in the **Format** section . Also you can customize some settings in the **Output** tab .

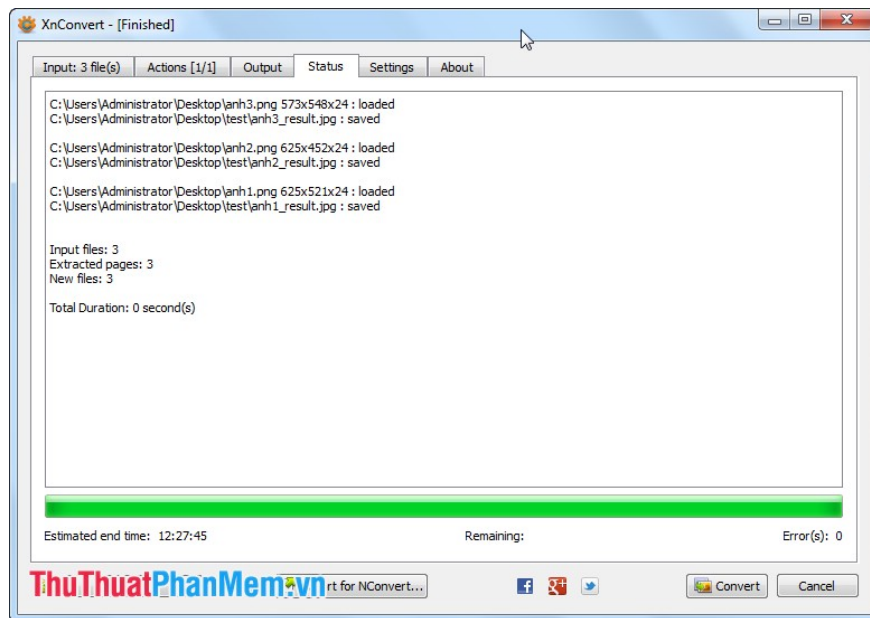

**Step 5:** Make stamps for photos.

After you have installed, you select **Convert** to start the program.

After the program has finished, you can close the program.

With the simple steps together with XnConvert, you can now stamp a series of photos in your own style.
