

Buy Laptop kind for good?

The demand for a mobile digital entertainment office has made laptops (laptops) more attractive than ever. With the great benefits it brings, owning a laptop becomes essential despite the price

The demand for a mobile digital entertainment office has made laptops (laptops) more attractive than ever.

With the great benefits that it brings, owning a laptop becomes essential even though the price is still quite high compared to the average income of consumers .

If you are wondering what kind of laptop you choose between the many existing products on the market, the following suggestions can help you buy a laptop that is the best and affordable:

Main use purpose

Source: Sparc

The main purpose of use will affect all your decisions in choosing the future laptop configuration and the budget you will invest.

If you simply surf the web, read and edit documents, you don't need a high configuration, but if you want to use heavy applications such as graphics, gaming, music, movies . then the money you must be spent is quite large. So think carefully before deciding to buy so you don't have to regret it later.

'Portable'

Known as a laptop, not every computer is as easy to use as its name (probably just to distinguish it from desktop computers). 'Portable' depends on two factors: the size and weight of the machine.

If you are an active person or a job that requires you to always move, the weight of the laptop you bring is something to be aware of. If you have to spend most of your time working with a computer, a laptop with a big screen will be good for you.

It is best to choose a weight type that is as light as possible, a moderate screen (about 12-15 inches) to ensure a compact, portable laptop.

Connect ability

The superior features of laptops are not only in itself but also in devices that it can connect to. Therefore, you need to consider the wireless networking capabilities, the number of USB ports, Bluetooth ports, memory card readers . The more modern the computer is, the better its communication, connectivity and connectivity. However, the price is also high.

Wireless networking capabilities are said to be indispensable for modern laptops. In addition, the number of peripheral devices connected to the computer via USB ports is increasing, such as digital cameras, MP3 players, MP4 movie players, storage disks, optical mice . leads to requiring many USB ports on laptops to meet.

You can use conversion devices (from one to multiple USB ports) to increase the number of USB ports. However, you should not choose a laptop with less than two USB ports.

Buy the best type

When deciding to buy a laptop, if possible, buy the best possible type compared to your financial ability and don't think about upgrading slowly. A major drawback of laptops compared to desktops is the ability to upgrade.

If at the desktop, you can easily upgrade each part, it is very difficult for laptops because of its basic design. That's not to mention the upgrade cost is quite large, even if you buy a new computer may be better.

Therefore, you need to consider carefully the options for motherboard, hard drive capacity, processor speed, video system, memory . Here are some laptop brands you have Reference: Sony, Gateway, Dell, eMachines, HP, Toshiba, Thinkpad, Acer, Fujitsu.
