

Buy mobile hard drive, SSD hard drive where genuine, cheap?

The following article of TipsMake.com will suggest to you: Where to buy mobile hard drives, SSDs where genuine, cheap?

Hard drive is an important device - computer accessory in your computer. Today, to meet the needs of customers, manufacturers have launched many models of products with good features and the advantage of superior technology. Facing with the diversity of the market, a lot of consumers are wondering whether to choose to buy hard drives in general and mobile hard drives, SSDs in particular, where prestige. The following article of TipsMake.com will suggest you **where to buy mobile hard drives, SSDs where genuine, the cheapest today.**

What is a portable hard drive, an SSD?

What is a portable hard drive?

A portable hard drive (also known as an external hard drive) is a large-capacity storage device, constructed almost like a normal computer hard drive, can be used to run software and operating systems. on it has just the same design as a USB data storage easy to move.

A portable hard drive was created to help you have a device that backs up and stores data safely, is larger and better than USB, or supports your hard drive when it can't be stored anymore.

Mobile hard drives have two types: mobile HDD and SSD mobile hard drive.

What is an SSD?

SSD (Solid State Drive) is a form of solid-state hard drive made up of many memory chips (Non-volatile memory chip), using storage technology from flash chip instead of mechanical technology applied to the hard drive. HDD. Memory chips are responsible for data storage, supporting data retrieval for fast results.

SSDs have removable drives (external SSDs) and internal drives.

Consulting criteria for selecting mobile hard drives and SSDs

Choose according to use needs and capacity

First of all, determine your needs to choose a suitable hard drive purchase. The identification is based on questions like: What do you use the hard drive for? Do you want to store information or upgrade the performance of the device? Your device is compatible with any type of SSD. In particular, determine how often you need to write and erase data on your SSD, as this factor greatly affects the life of an SSD.

Mobile hard drives, SSDs come in a variety of capacities for you to choose from, ranging from 120GB to 10TB. After determining the needs and cost you can spend on this product combined with the capacity factor.

If your needs are simple and convenient data storage: Buy a portable HDD or SSD with a large capacity. SSDs can read / write data faster than HDDs.

If your needs are both data storage, performance upgrades, higher operating system settings, faster machine and application startup, you should use an attached SSD. in a machine or a mobile SSD with a capacity of 240GB or more, especially should choose a SSD with a capacity of 500GB or higher to store graphics files, videos with large capacity.

Hard drive size

With portable hard drives, this feature is not so important because most of them are connected by USB, small size and convenient to move.

With SSDs, SSDs come in two types of sizes: 3.5 inches for PCs and 2.5 inches for laptops. However, users can use the converter tray to install 2.5 inch type for PC. In addition, now thin laptops that do not have enough space to install 2.5-inch SSD drives will be supported with the more compact M.2 SSD. You should check the size of your hard drive to find compatible type.

Communication Methods

Portable hard drive can be connected to all devices with USB connection.

SSDs have basic connection methods: SATA III, mSATA, M.2 SATA and M.2 PCIe. When choosing to buy an SSD, you have to check which ports your computer supports to choose accordingly.

Type of storage memory and access speed

Access speed is also an important part when choosing a hard drive. Read and access speed of SSDs (both portable and external) is better than HDDs. Currently on the SSD market there are 3 main types of memory, including:

1. SLC (NAND Single Layer Cell - flash memory level) - Access speed is low but durable, cheap.
2. TLC (NAND Triple Layer Cell - Three-level flash memory) - Low durability but good access speed.
3. MLC (NAND Multi Layer Cell) - This type has good access speed, high storage capacity and more stable durability than SLC type.

Rates and brands

The market for portable hard drives and SSDs is quite diverse in terms of brand and price. When buying please select corresponding according to the criteria above the price you can spend, brand names and reputable address to provide genuine goods to get the best product quality.

Price to sell mobile hard drive, SSD hard drive

The price of hard drives depends on the function, capacity, structural elements and brand of each product.

Average price of various types of removable hard drives:

1. The price of mobile HDDs ranges from over 1 million to 10 million corresponding to the segment of capacity from 500GB to 10TB.
2. Because of its high performance, the price of SSD mobile hard drives is much higher than that of HDDs. Ranging from 1.5 million to 15 - 20 million corresponding to a capacity of 120GB to 2TB.

The price of SSDs in the range is from 1 million to 15 million with a capacity of 120GB to 2TB.

Buy mobile hard drive, SSD hard drive where genuine, cheap?

Currently, the market for mobile hard drives and SSDs is very exciting with many big brands such as SanDisk, Team Group, Samsung, Intel, WD (Western Digital), . After choosing a satisfactory product, Many customers have the headache of not knowing where to buy genuine mobile hard drive or SSD. Quantrimang would like to introduce you to a reputable address specializing in providing genuine goods with over 10 years of experience in the field of e-commerce META.vn. META is trusted by customers to choose to use the service thanks to the professionalism of its staff, good product quality with competitive prices, guaranteed customer care regime and always updated many chapters. attractive promotions.

To buy a mobile hard drive, genuine SSD hard drive, cheap price at META, you can order through META.vn website, contact hotline or come directly to buy.

Hotline : Hanoi: 024.35.68.69.69 - Ho Chi Minh City: 028.38.33.33.66.

Address of direct purchase:

1. Hanoi: No. 56 Duy Tan, Dich Vong Hau Ward, Cau Giay
2. Ho Chi Minh City: 716-718 Dien Bien Phu, Ward 10, District 10

Hopefully, with the above article, you have got information on where to buy portable hard drives, genuine SSD drives, cheap prices. Visit TipsMake.com regularly to get useful information about social life, good tips everyday!

You finished reading the article "**Buy mobile hard drive, SSD hard drive where genuine, cheap?**" edited by the [TipsMake](http://TipsMake.com) team.
