

## Buy your own iPhone X components for \$ 550

YouTube account Nikolay Tanev went to the Shenzhen electronics market to search for components to assemble an iPhone X. As a result, this guy only needed to spend half the price of a genuine product to get one. iPhone X complete.

Shenzhen electronics market is considered to be China's largest electronic "heaven" market. It sells all kinds of electronic goods from large to small, from expensive to cheap, new and old, any electronic goods you want to buy are available. YouTube account Nikolay Tanev came here to try to find components to assemble an iPhone X. As a result, this guy only needs to spend half the price of a genuine product to get a complete iPhone X correction. Let's take a walk around Nikolay Tanev at this famous Shenzhen electronics market.

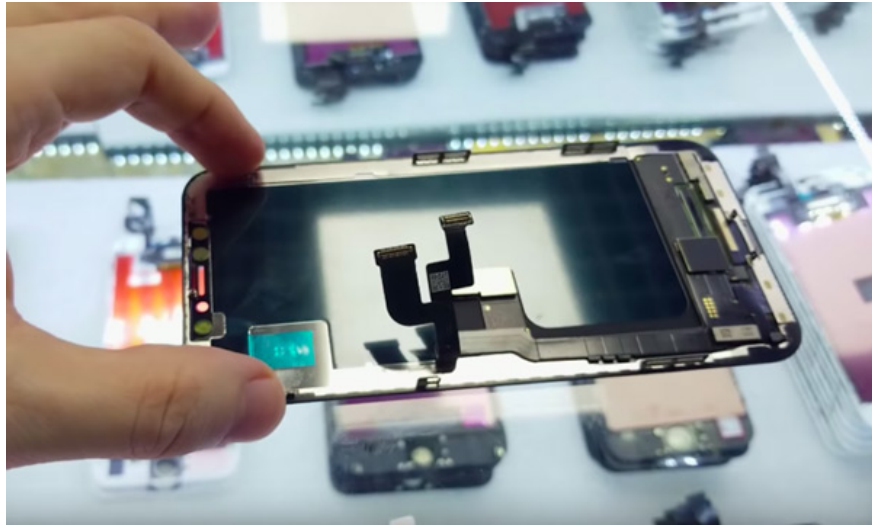

First, Nikolay Tanev went to the area to sell motherboards (mainboard) with 64 GB of memory, front camera, rear camera, circuit of face recognition sensor system . To get this number of components, the guy only need to spend 280 USD.

The back cover is equipped with a management board, two batteries form an L-shape, an external speaker and even lightning costs \$ 100. If you want a cheaper price, you can choose to purchase these accessories separately, but it will take more installation.

With the screen panel the buyer can test its performance on the spot and it costs \$ 130.

Next Nikolay Tanev bought other components such as sim tray, screws . Nikolay Tanev had enough components to assemble an iPhone X and the total amount to be spent was about 550 USD.

All components Nikolay Tanev purchased are in the form of modules, so putting them together is not difficult. The guy only takes about 30 minutes to complete.

Next is the stage of running the software for the machine. Many say that this step is not easy to do with Apple's iOS operating system.

Nikolay Tanev checked features like FaceID, camera, compass . on the device. All work smoothly.

Add an additional amount to supplement the box, accessories, instructions for use . the guy has a complete iPhone X that if only look at the outside, everyone would believe this is the product Genuine rather than being assembled by components at the electronics market.
