

Can an Israeli security company unlock any iPhone, even when running iOS 11?

Cellebrite, an Israeli company, said it has developed a new way of unlocking nearly every device running iOS, including iPhone, iPad, iPad mini, iPad Pro, iPod Touch running iOS 5 to iOS 11.

Cellebrite, an Israeli company, said it has developed a new way of unlocking nearly every device running iOS, including iPhone, iPad, iPad mini, iPad Pro, iPod Touch running iOS 5 to iOS 11.

Surprisingly, Cellebrite can overcome all iOS 11 security barriers as well as new iPhone and iPad hardware. It is not known which version of iOS 11 Cellebrite has overcome. But many people believe that the iOS 11 "downed" related to security vulnerabilities has been patched by Apple in recent updates or related to leaking iBoot source code of iOS earlier this month.

Last December, the US Department of Homeland Security accessed an iPhone after sending people to train at Cellebrite. The company also helped the FBI crack the suspect's iPhone 5c in a shootout while Apple refused to make the firmware custom for Apple.

Dedicated tool to break koas of Cellebrite's Andriod and iOS devices.

Currently, Cellebrite is the only company that can overcome the security barrier of Andriod and iOS devices without affecting internal data. To be able to unlock these devices, Cellebrite has created a dedicated device including PIN, pattern code, lock screen password .

Information is posted on the Forbes website.
