

Centrino Duo promises a new boost to the laptop market

Consumers are waiting for product lines that encapsulate all the features of the home entertainment system, watching movies, photos, listening to music, playing games ... into an ant-based laptop Intel's new architecture.

Consumers are waiting for product lines that encapsulate all the features of the home entertainment system, watching movies, photos, listening to music, playing games . into an ant-based laptop Intel's new architecture.

Laptops use Centrino Duo to allow for more heavy games thanks to the integrated 4th generation graphics engine Intel Graphics Media Accelerator X3100.

Centrino processor technology, with the Intel Next-Gen Wireless-N wireless connection system supports the draft 802.11n standard as well as previous 802.11a / b / g, providing connection bandwidth of up to 300 Mb / seconds, up to 5 times faster than 802.1a / g products and up to 2 times wider coverage.

Consumers will be able to watch TV and videos with smoother and sharper image quality thanks to Intel Clear

Video graphics technology. The new TV Wizard tool makes it easy for laptops to connect to high-definition TVs for home entertainment purposes. Sound quality also has a strong improvement with High Definition Audio technology.

One of the most prominent features of the Centrino Duo processor platform is the improved battery life due to its power-saving and management features.

Applications on the computer will be opened faster thanks to Turbo Memory, an optional memory technology, which reduces runtime and data loading for programs that require large memory and are frequently used. Laptops are booted up to 20% faster while reducing power consumption of computers.
