

Change Google DNS on Mac

Google DNS is one of the best DNS currently available and used by many people with high speed and stability. However, in the case of fiber optic breaks or errors related to Google services, changing Google DNS may help you resolve those problems. Today, TipsMake.com will guide you to change DNS on Mac!

Google DNS is one of the best DNS currently available and used by many people with high speed and stability. However, in the case of fiber optic breaks or errors related to Google services, changing Google DNS may help you resolve those problems. Today, TipsMake.com will guide you to change DNS on Mac!

Change Google DNS on MacOS

1. What is DNS and DNS Lookup?
2. How to change DNS Quad9 to block malicious domain
3. How to change DNS to be able to surf faster, don't worry about being blocked

DNS settings on the Mac are specified in the Network window.

In this article, we will change the DNS server settings on Mac OS 10.5.

First, you need to access **Apple > System Preferences > Network**.

If the padlock icon in the bottom left corner of the window is locked, click the icon to make changes and when prompted for authentication, enter your password.

Select the connection you want to configure Google Public DNS. For example: To change the settings for Ethernet connection, click **Built-In Ethernet**, then click **Advanced**.

To change the settings for wireless connection, click on **Airport**, then click **Advanced**.

Select the **DNS** tab .

Click + to replace any of the listed addresses or add Google IP addresses at the top of the list:

1. For IPv4: 8.8.8.8 and 8.8.4.4.
2. For IPv6: 2001: 4860: 4860 :: 8888 and 2001: 4860: 4860 :: 8844.
3. For IPv6-only: You can use Google DNS64 instead of the above IPv6 addresses.

Next, click **Apply**> **OK** .

You can refer to the article [Checking Google DNS settings](#) to check if your settings are working correctly.

Repeat the above process for additional network connections if you want to change.

Good luck!
