

Change the look of VLC program

To change the VLC interface you have a lot of options, below is the guide to install the new interface for VLC details on both Windows and Ubuntu, please follow.

TipsMake.com - VLC Media Player is one of the most used video viewing applications on computers. In addition to supporting all video formats, VLC can also stream videos, add video subtitles, download YouTube videos and especially the ability to customize the interface high.

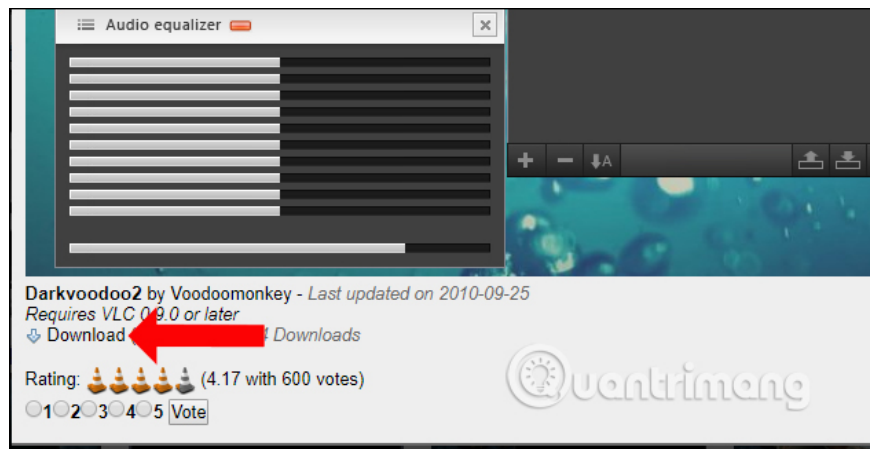

To change the VLC interface you have a lot of options, below is the guide to install the new interface for VLC details on both Windows and Ubuntu, please follow.

1. Advanced tricks use VLC Media Player
2. Instructions for cutting videos with VLC Media Player software
3. 22 shortcuts to VLC for Windows and Mac

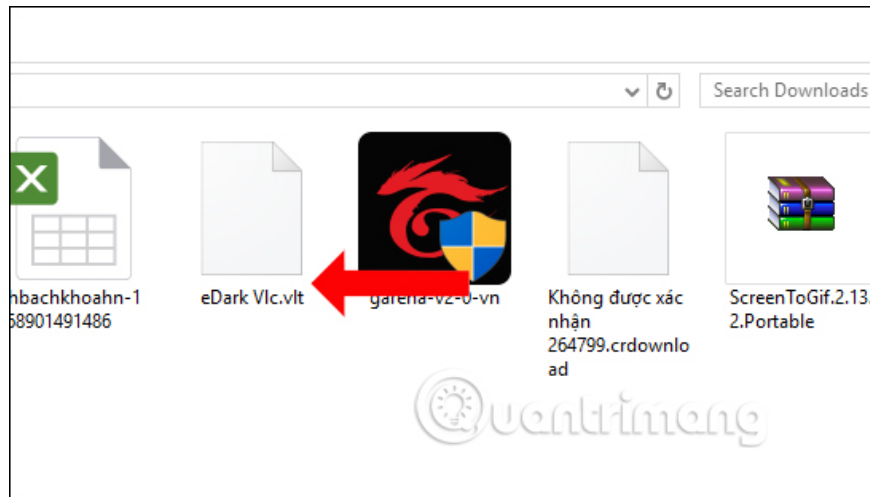

Change VLC interface on Windows

First of all, you can access the link below to download the interface for VLC that I like. Click on the interface you want to download and then click **the Download button**.

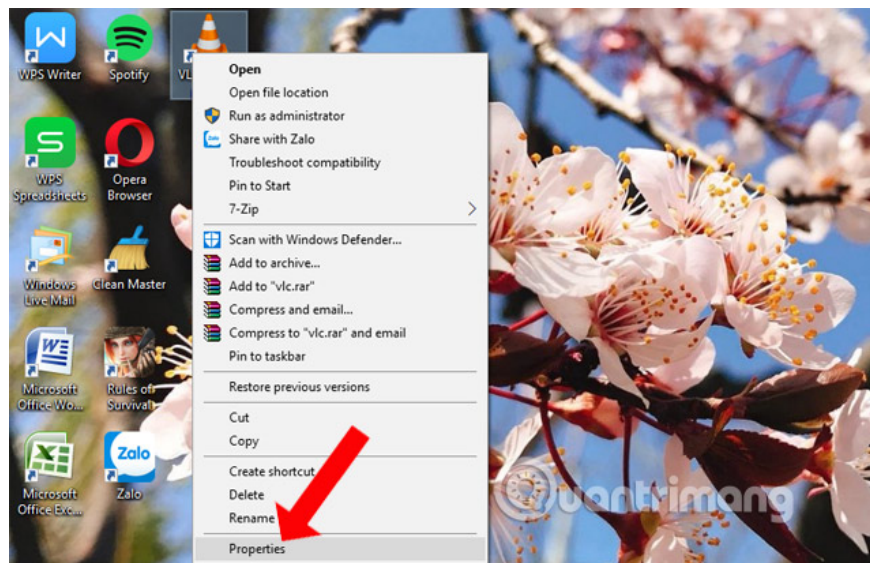

1. <https://www.videolan.org/vlc/skins.php>

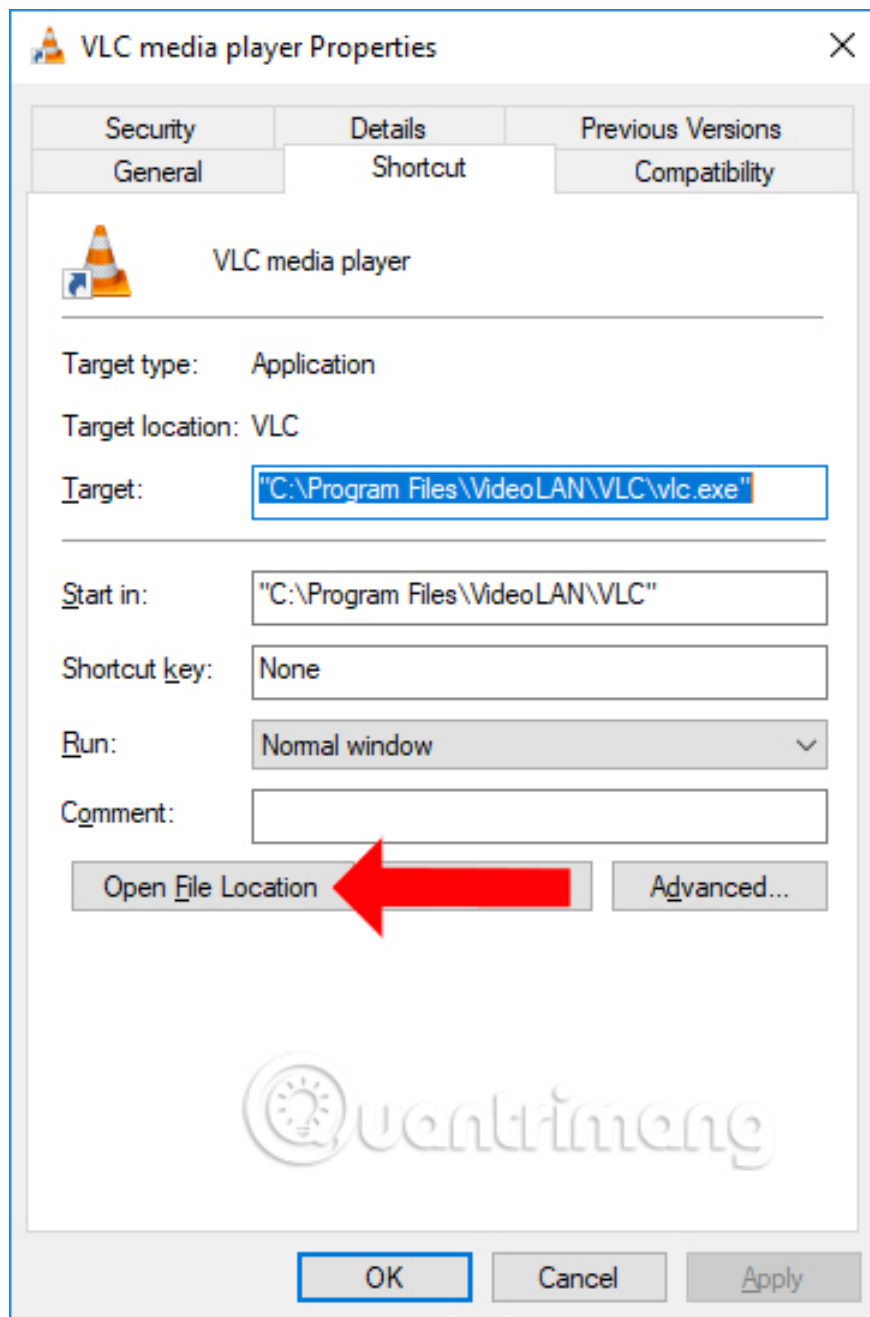

The downloaded file will be in .vlt format, you can copy this file by right-clicking on the file, selecting Copy or selecting the file and pressing Ctrl + C.

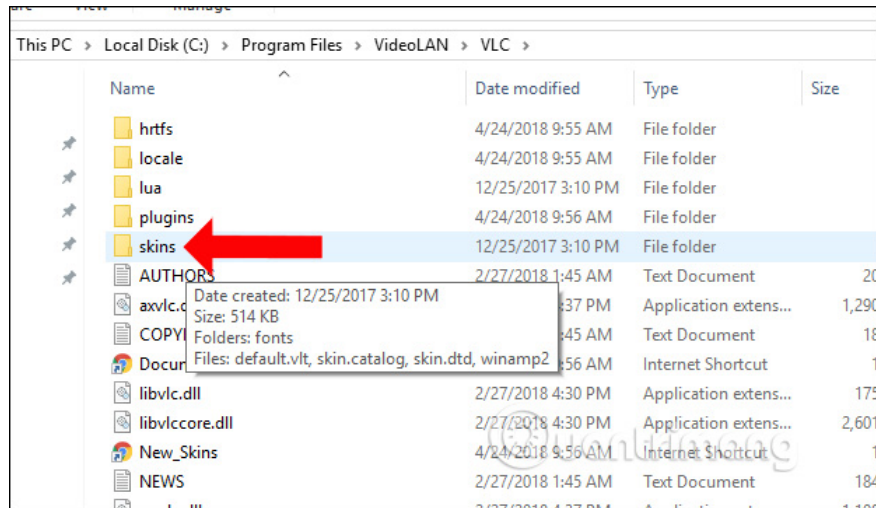

You right-click the **VLC Player software** icon on your computer and click **Properties** .

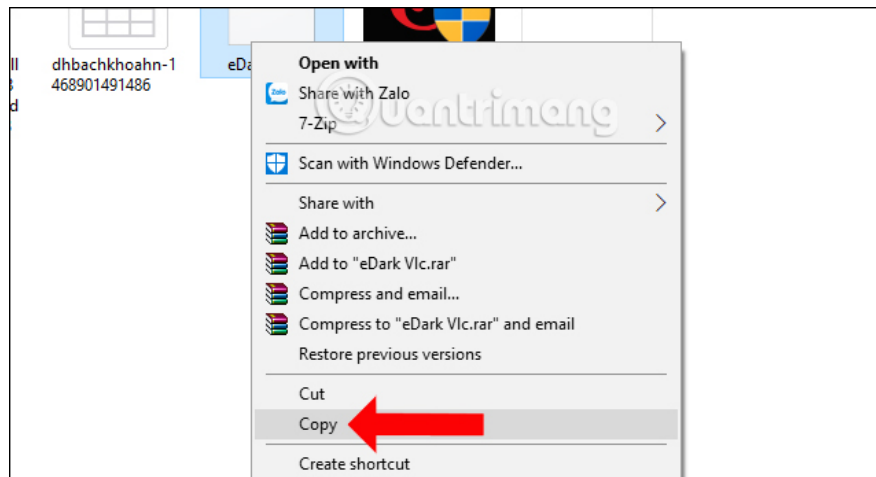

In the new dialog interface click on **Open File Location** to open the storage folder for the software.

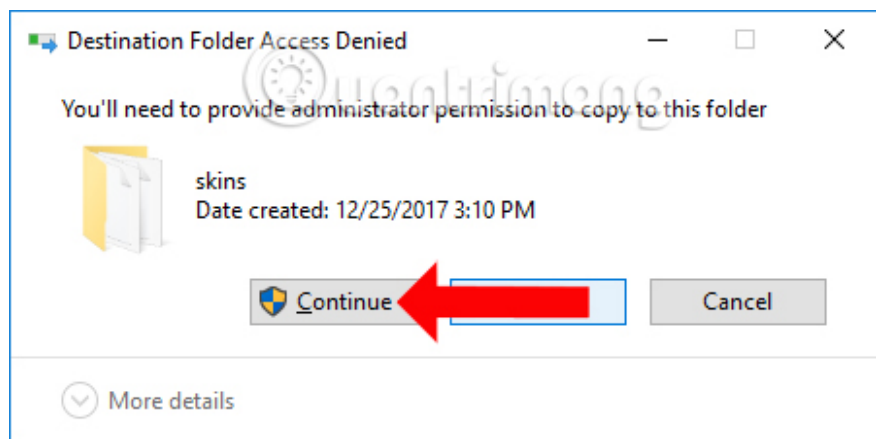

In the folder of VLC, look to **the skins directory** as shown below.

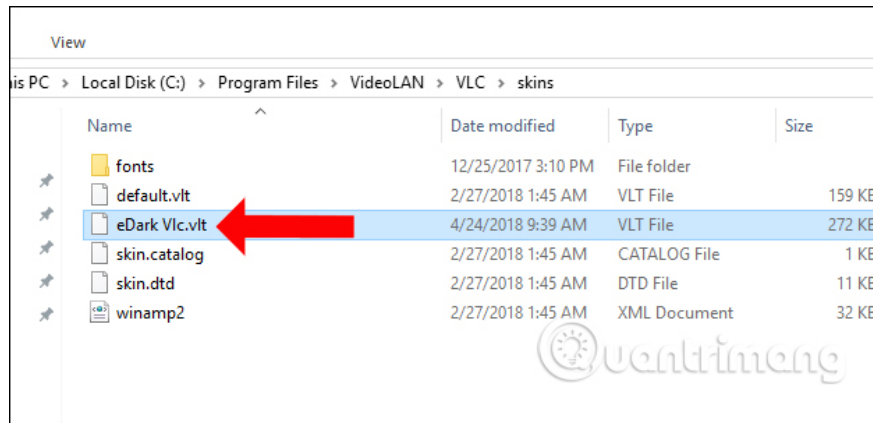

You copy the new .vlt skin file to download it to your computer and paste it folder of VLC skins .

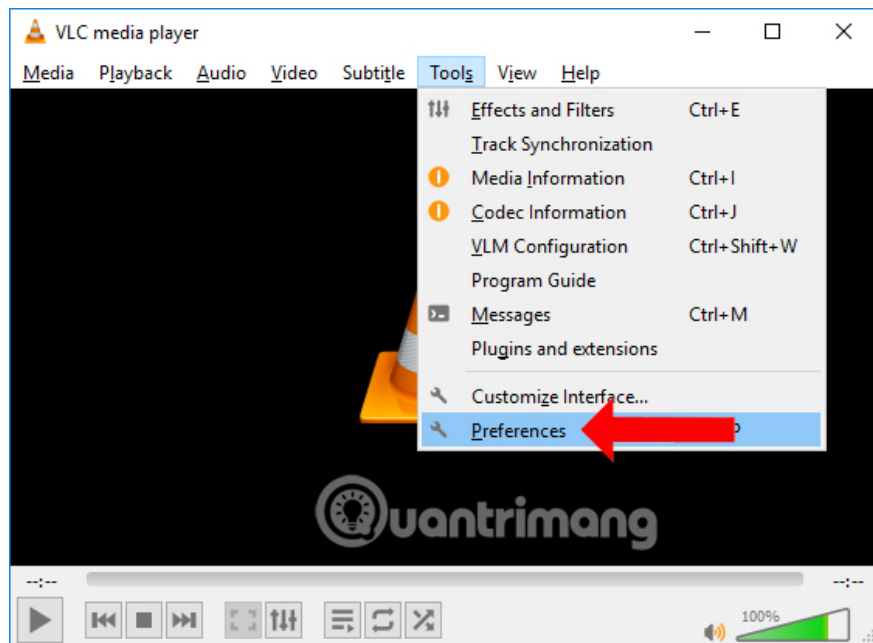

In case the system requires Admin permission to access, click **Continue** to continue.

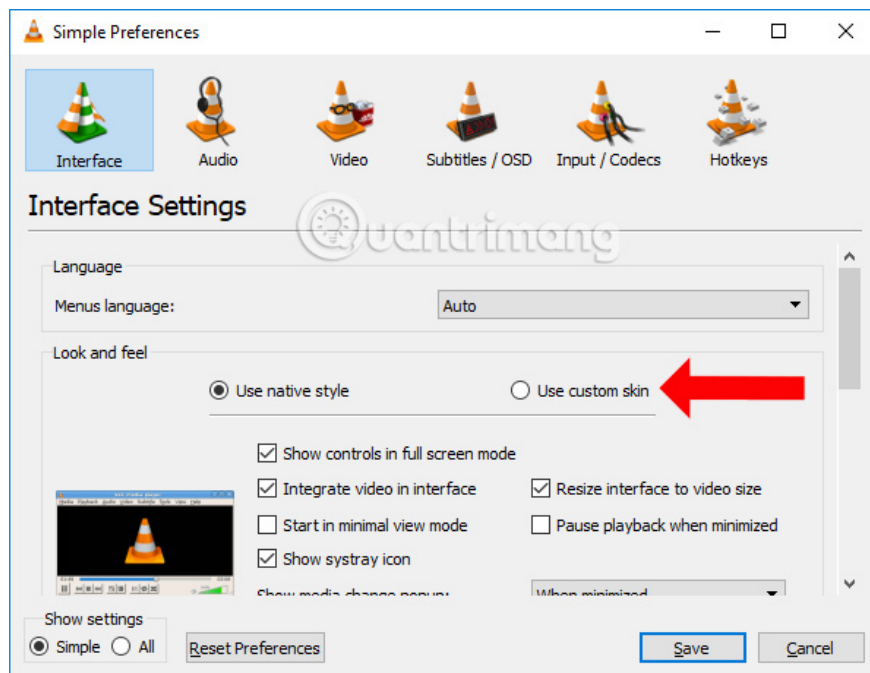

The file will then be located in the folder of VLC Player skins.

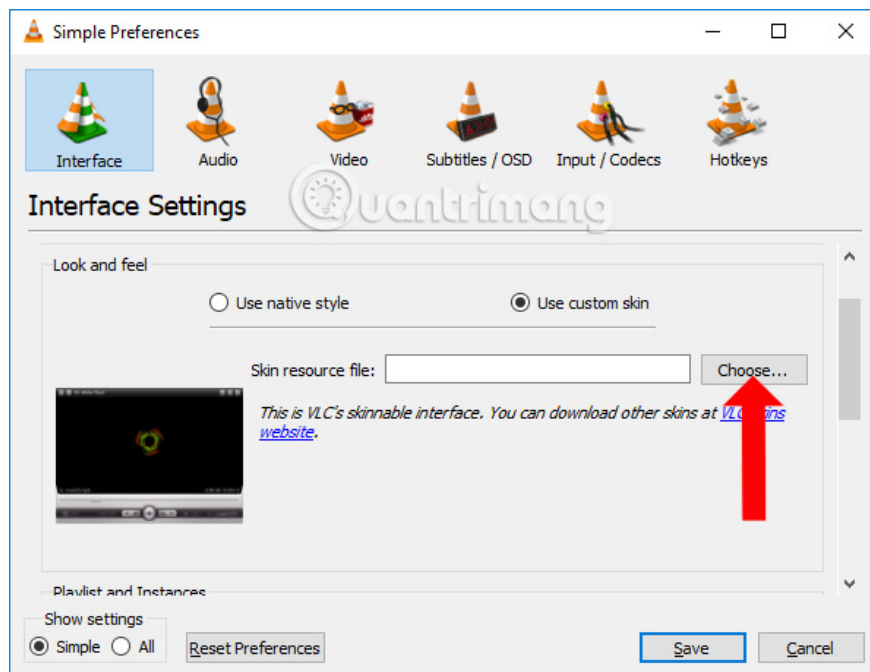

Start the VLC software on your computer, then click on **Tools**, select **Preferences** , or you can press Ctrl + P.

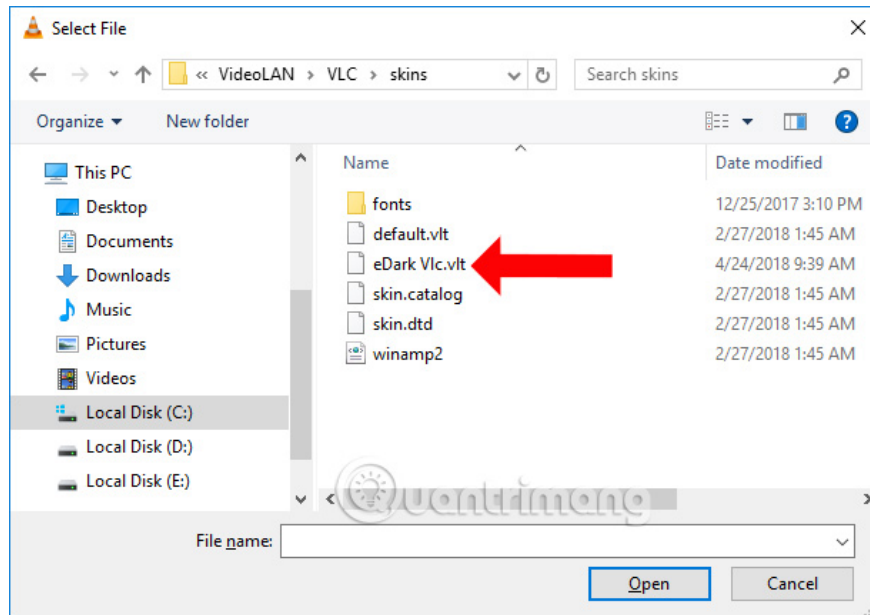

In the **Interface** section, select the **Use Custom Skin** check box .

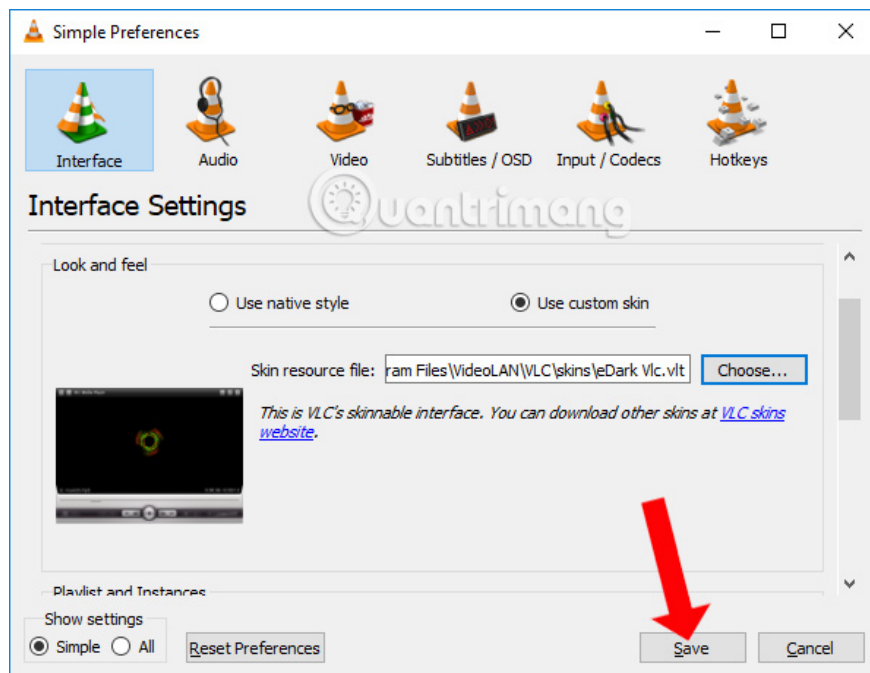

Click on **the Choose button** to select the folder to store new skins for VLC.

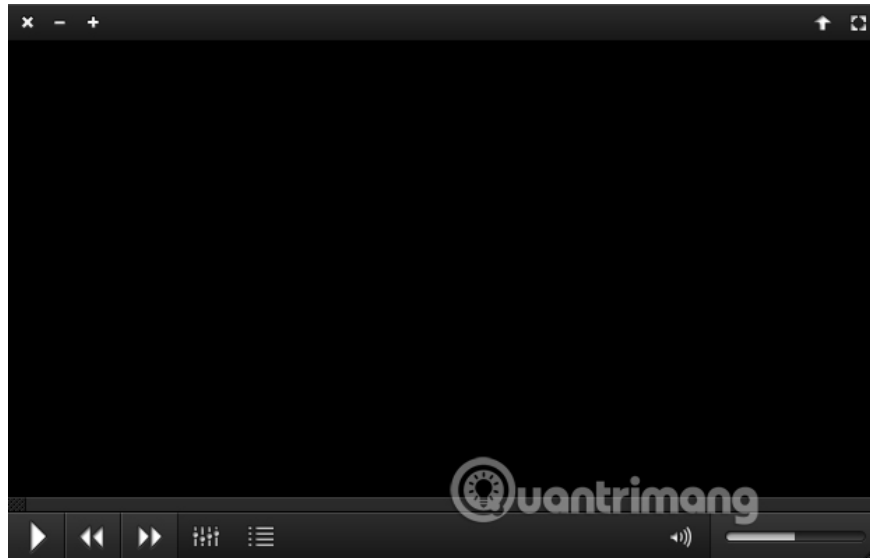

Click on the .vlt interface file that you just downloaded in the folder of VLC skins and then click **the Open button** to select it.

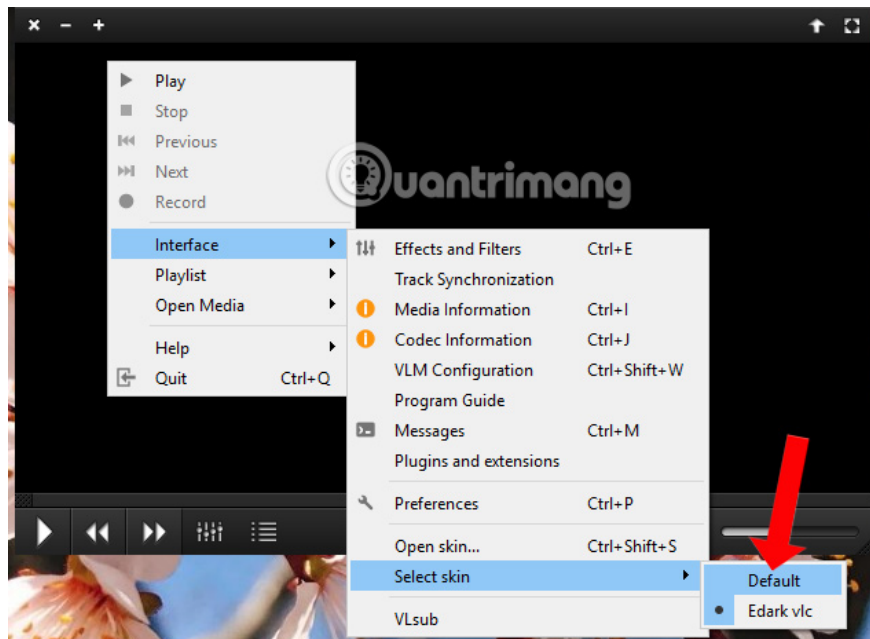

After selecting the new interface for VLC, click the **Save** button to save it.

We turn off and restart VLC to see the new interface applied to the software.

In case the user wants to return to the same way, right-click on the toolbar select **Interface** select Next **Select skin** and then click **Default** .

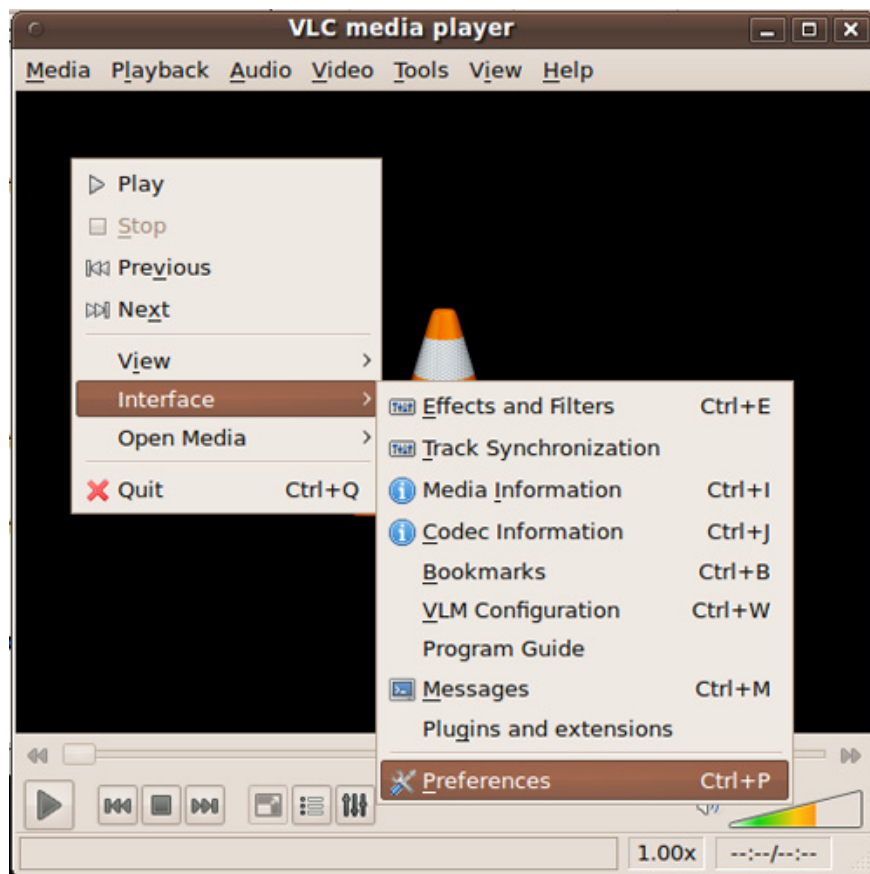

With just a few simple steps, we were able to change the interface on VLC software. There are many different interfaces for users to choose for the software.

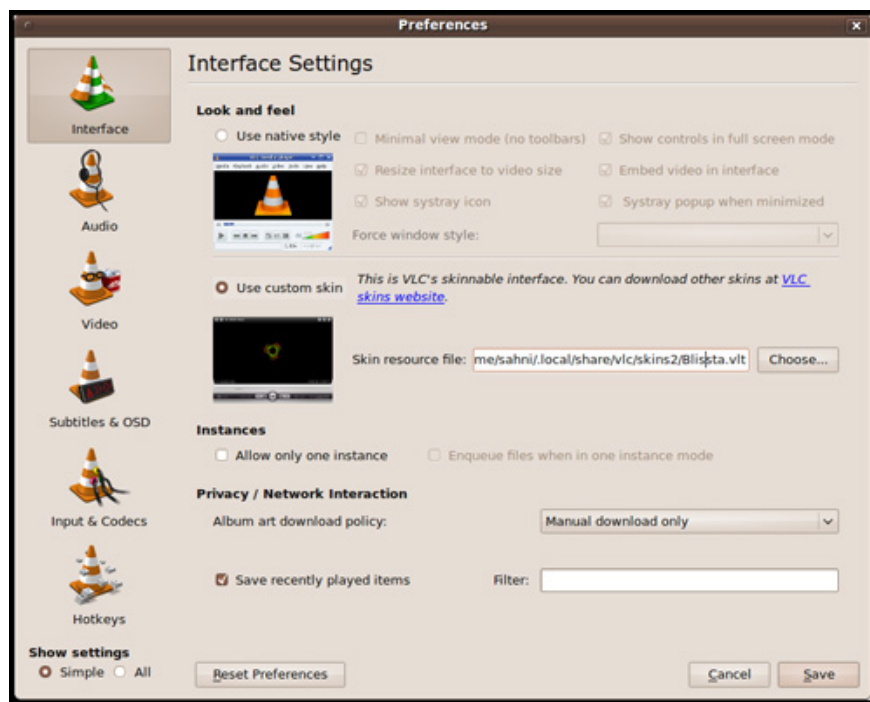

Change VLC interface on Ubuntu

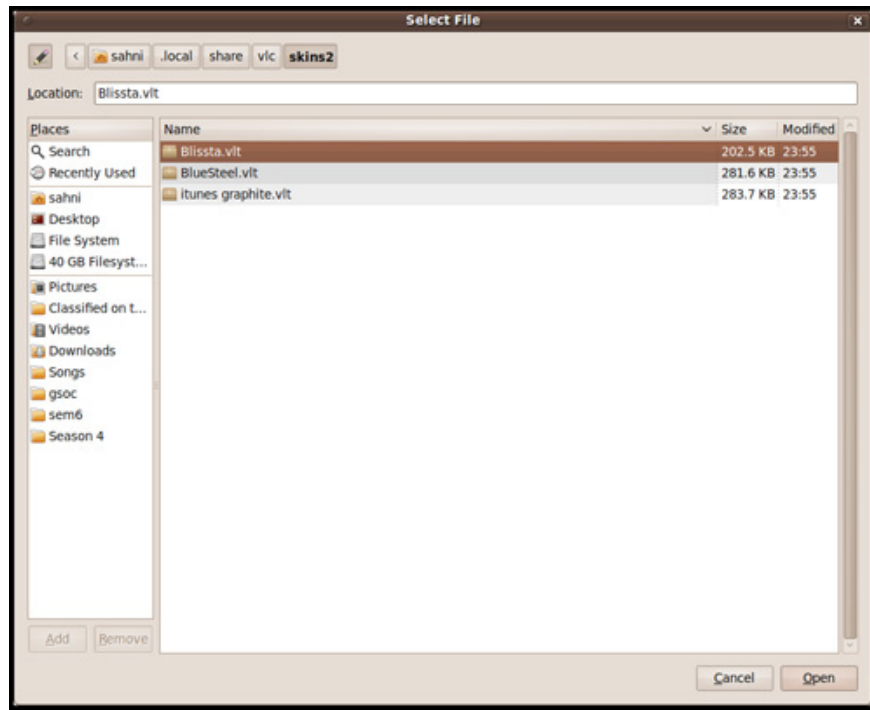

You also access the link to download the VLC interface above and save to the address `~ / .local / share / vlc / skins2` . The `~` sign here is the user's system directory, for example `/ home / username`

Open VLC, right-click and select **interface -> preferences** :

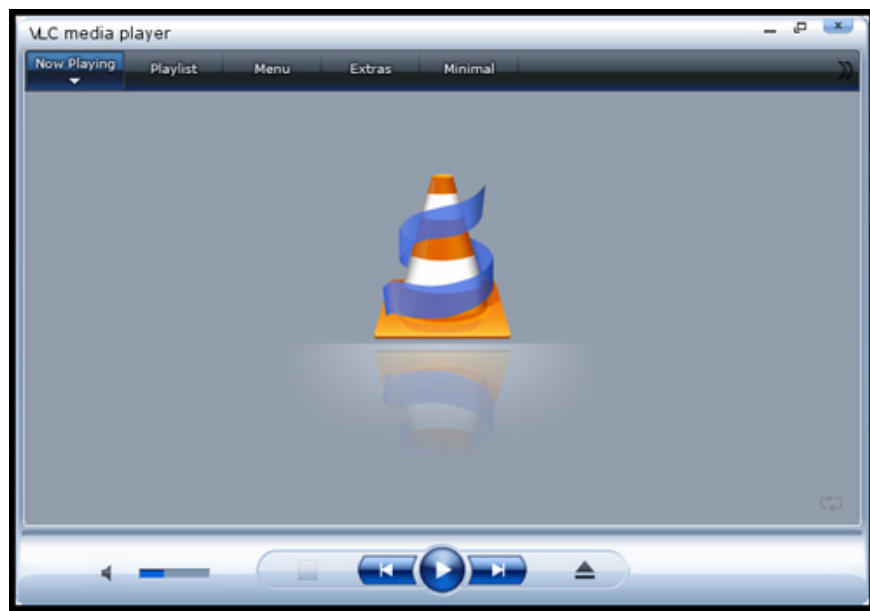

In the **Preference** options window, select **use custom skin** below **Interface category** , point to the directory containing the interface file and select the appropriate interface:

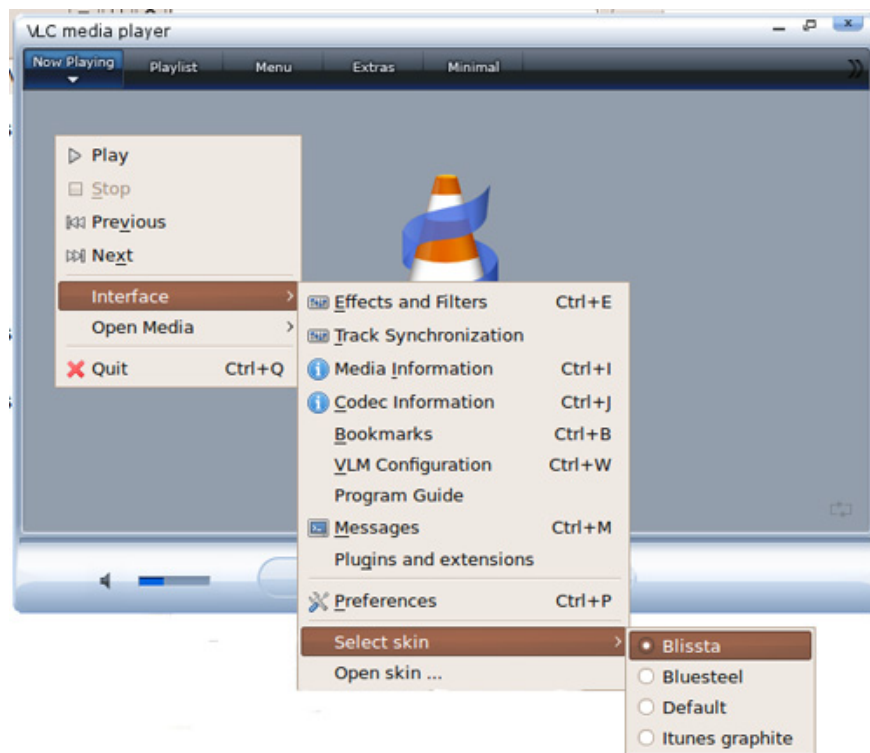

Restart VLC, and enjoy the program's completely new interface, this is the **Blissta** interface package

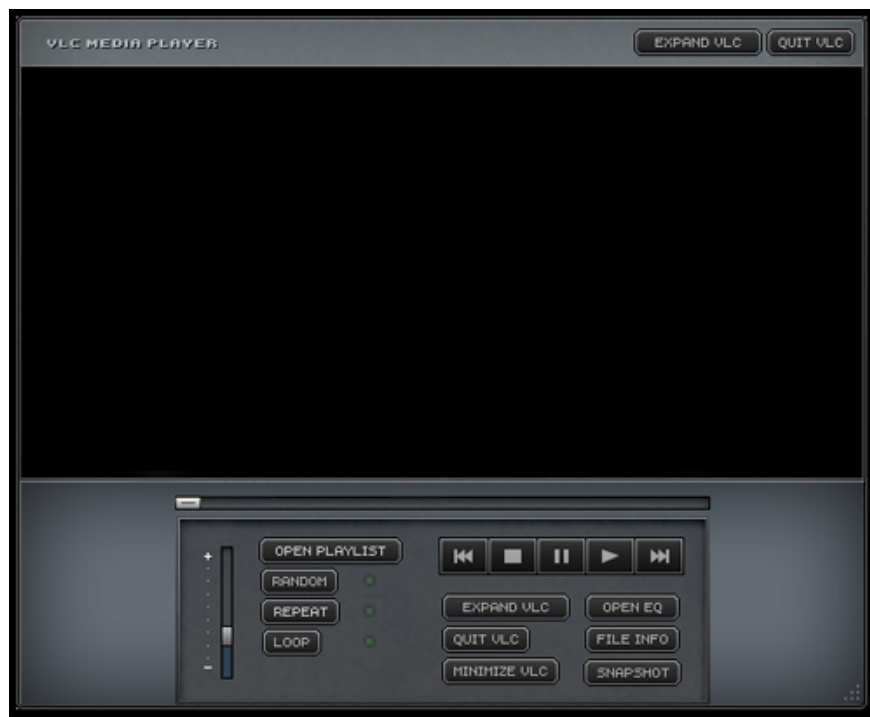

When you have multiple interface packages, just copy the **.vlt** files to the same directory `~ / .local / share / vlc / skins2` and restart VLC:

With this operation, you can freely change the interface of the program without restarting VLC

Here is the **Blue Steel** package, the latest updated package of Linuxers with a layout quite suitable for the purpose of many users:
