

Change Windows 10 to Vietnamese - The default language will be English.

When installing Windows 10, the default language is English. However, if you want to switch to Vietnamese for a more user-friendly experience, it's very simple. If you don't know how, you can refer to the guide below on how to install Vietnamese language for Windows 10.

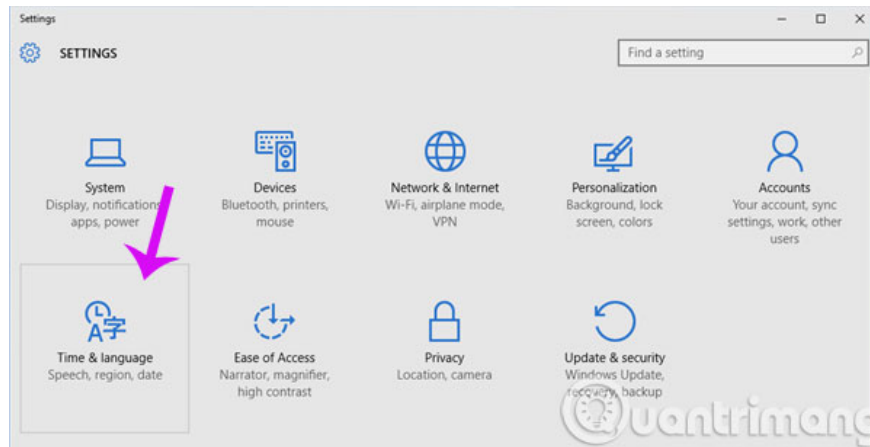

When installing Windows 10 , the default language is English. However, if you want to switch to Vietnamese for a more user-friendly experience, it's very simple. If you don't know how, you can refer to the guide below on how to install Vietnamese language for Windows 10.

Install Vietnamese language, change the language for Windows 10.

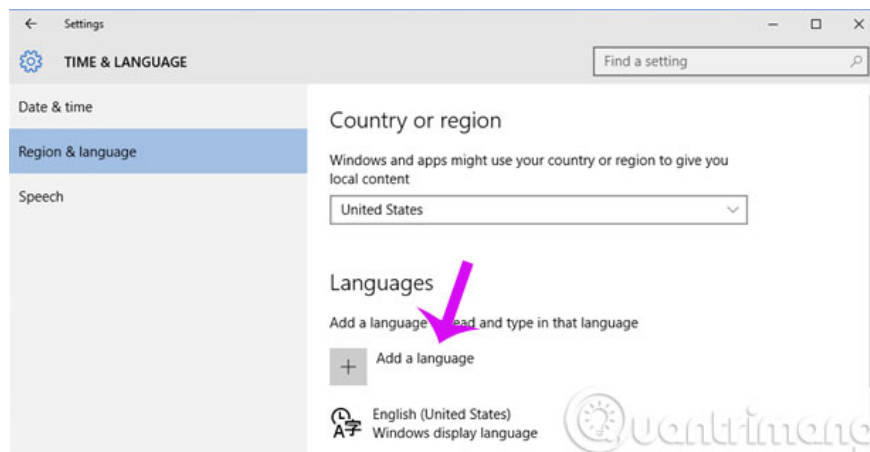

Step 1 : Access the **Start Menu** and select **Settings** .

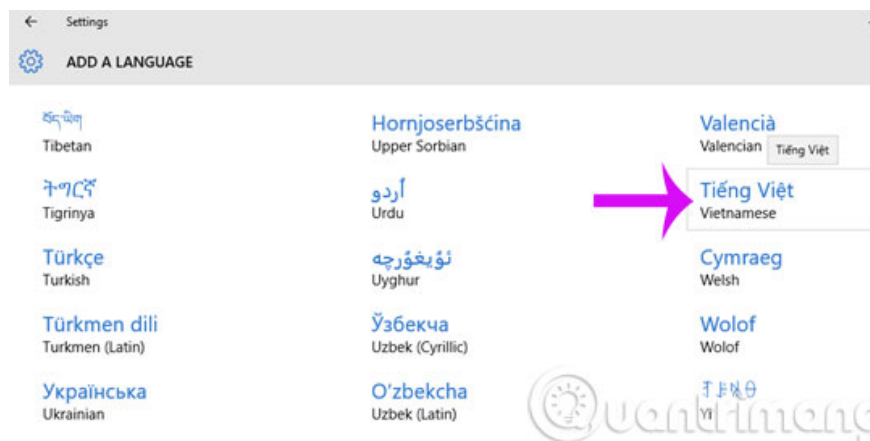

Step 2 : In the **Settings** window , click **Time & Language**

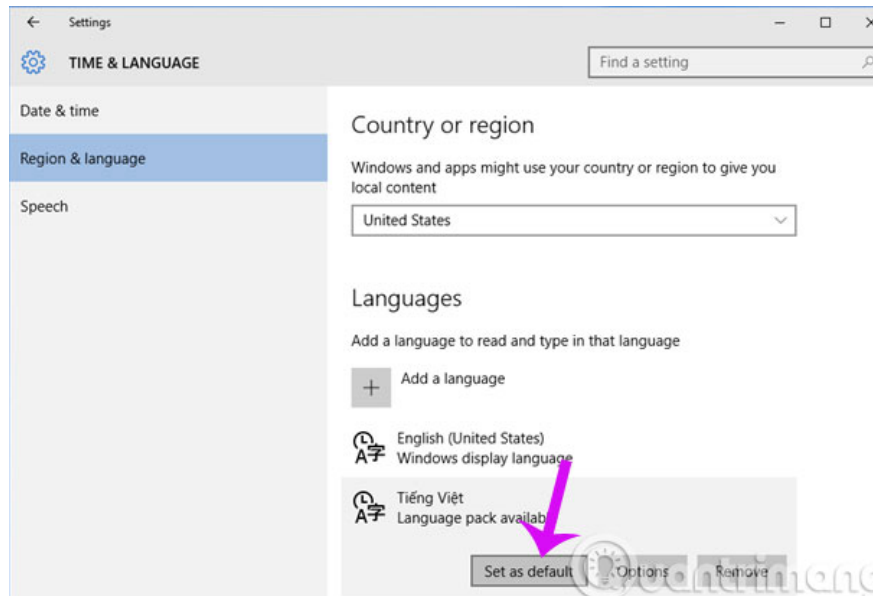

Step 3 : In the **Time & Language** interface , select **the Region & language** menu on the left. You will see that the default language is English. To add a language, click **Add a language** .

Step 4 : A list of languages will immediately appear; select **Vietnamese**.

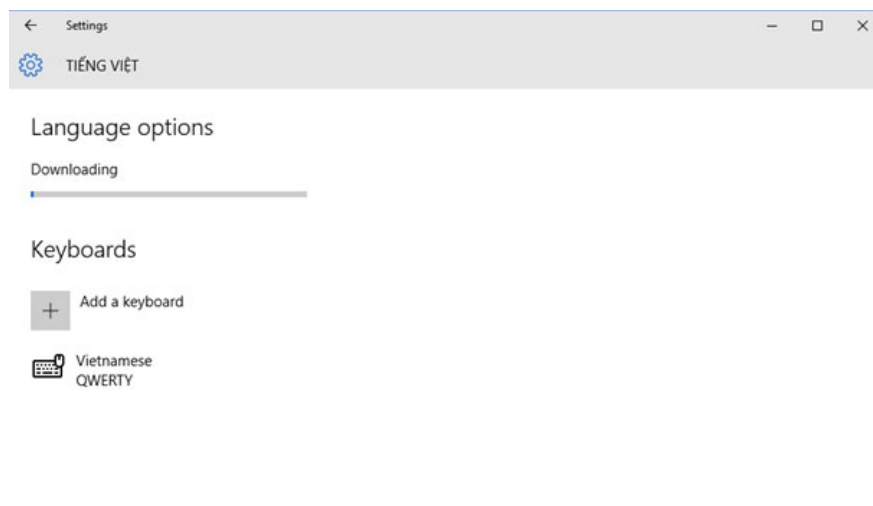

Step 5 : Next, your chosen language will appear. Open the **Language** section and click **Set as default** to set it as the default.

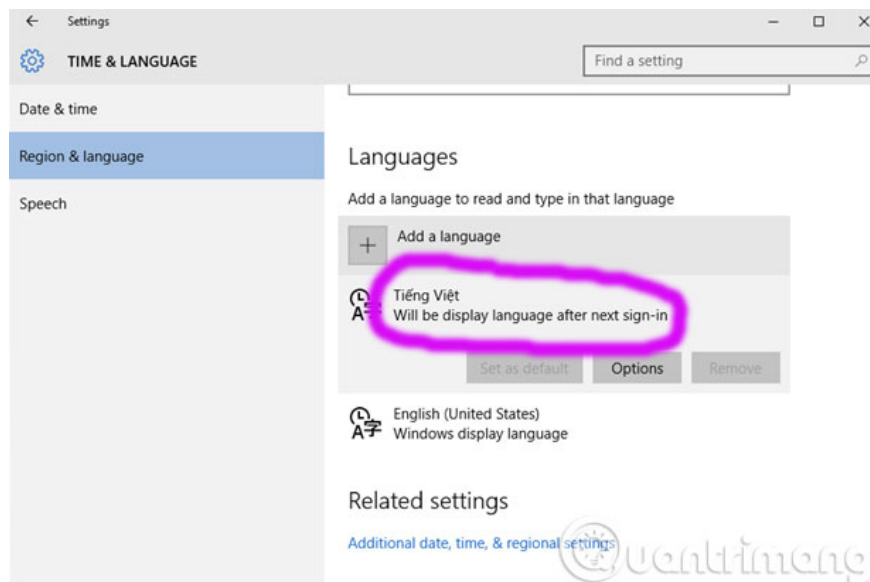

Step 6 : Click **Options** and **Download** to download the language pack.

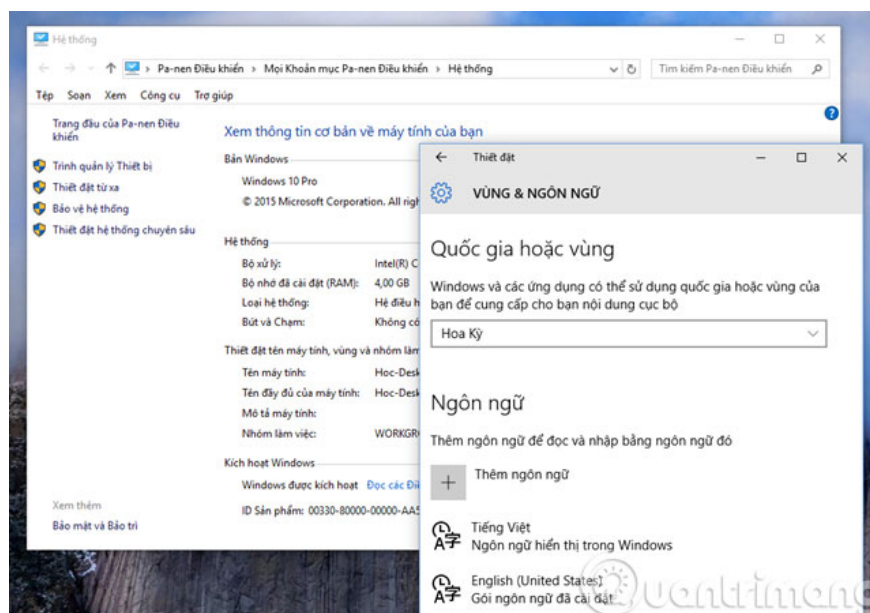

Note: If you don't see the Download option, enable Windows 10 updates by following step 1 in the article [How to disable Windows Update on Windows 10](#) , but select **Enable** instead of **Disable**.

Step 7 : Once the download is complete, the message "**Will be display language after next sign-in**" will appear in Vietnamese.

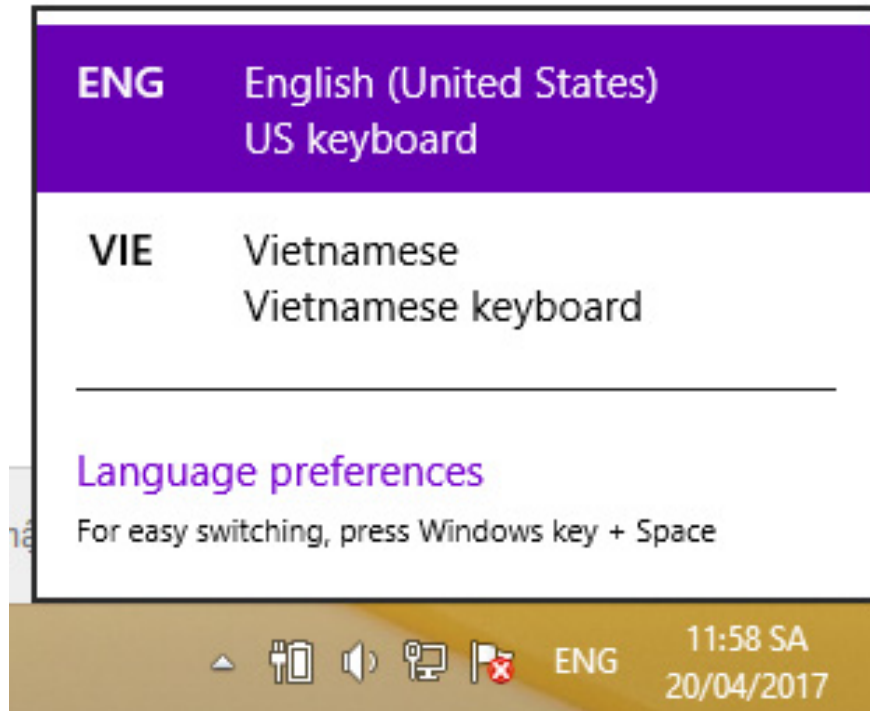

Step 8 : Finally, log out and log back into Windows, and you're done.

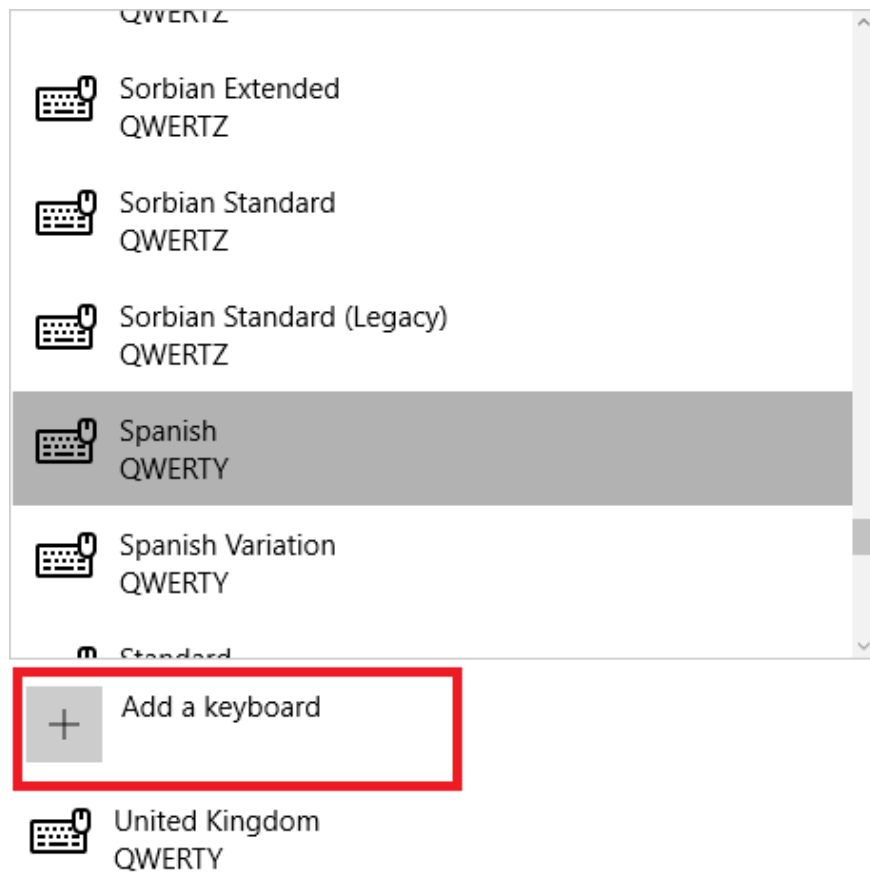

Switch between keyboards

When installing a new language pack, the corresponding keyboard is automatically installed along with it. This has several advantages—especially in cases where the language has different characters than the one currently in use or uses special characters on letters. You can easily switch between installed keyboards by clicking the **Windows Key + Space** or left-clicking the 3-letter language code in the bottom right corner of the taskbar.

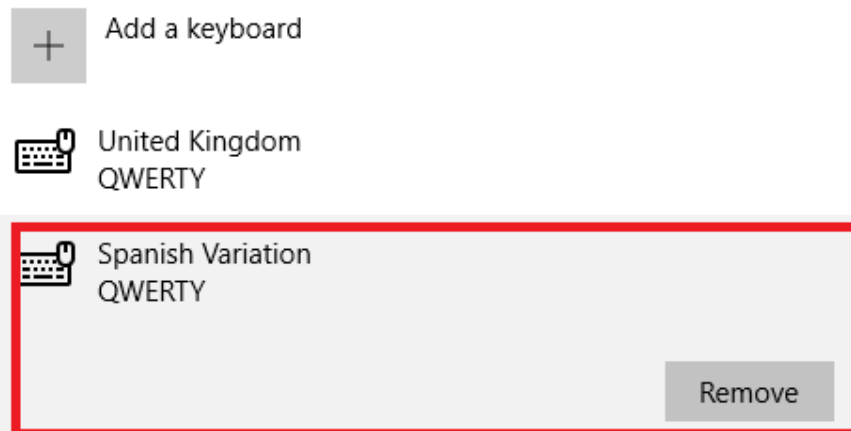

Installing additional keyboards without language packs.

If you want to add a new keyboard but don't intend to change the system language, follow these steps: Click **Start > Settings > Time and Language > Region and Language** . Select the language pack corresponding to the keyboard you want to add and choose **Options** . Next, select **Add a New Keyboard** and make your selection from the list.

You can also delete keyboards from this menu; simply select the keyboard you want to delete and press **Remove**

Keyboards

Change the Speech options.

The final part of the language that needs adjustment is Speech, both input and output. Input is what the computer will recognize when you give a voice command, and output is the language Cortana will use.

Go to **Start Menu > Settings > Time and Language > select Speech** from the left pane.

Speed

The Speech Language option allows you to set the input language. Note that the corresponding language pack must be installed before you can change the input speech language.

The Text-to-Speech option allows you to select Cortana's voice. When you install a language pack, the corresponding Cortana voice will be installed.

Download Windows 10 language packs

Windows 10 is Microsoft's latest operating system. The Windows 10 technical preview was only available in a select few languages, while Windows 10 RTM comes with a full list of supported language packs. Windows 10 makes downloading and installing new language packs easier, and users can directly download a new language pack from Windows Update.

But for advanced users, the ability to download and install your chosen language packs even without an internet connection is a plus. Therefore, below are direct download links to the latest Windows 10 language packs.

1. [Link to Windows 10 64-bit language pack](#)
2. [Link to Windows 10 32-bit language pack](#)

There are two types of language packs: full language packs will convert the Windows 10 operating system to a specific language, while language interface packs will change the input language so you can write in languages other than the operating system's default language.

Full language packs were previously offered free by Microsoft in earlier operating systems, such as the Windows 7 language pack, but now users must purchase the full language pack from Microsoft if they want to install it. Language interface packs are still offered free of charge.
