No longer confined to a fixed language model, Chat Smith offers a flexible experience thanks to its superior contextual understanding and rich system of virtual experts.

1. Specialized "AI Agents" System

Chat Smith's biggest selling point is its extremely clear role division. You no longer need to waste time writing lengthy commands (Prompts) to direct the AI. The application integrates virtual assistants for each specific field:

1. **Creative Expert:** Helps you outline articles, write professional emails, or even compose song lyrics.
2. **Programming Advisor:** Provides support in debugging code, optimizing algorithms, or explaining complex code snippets in the clearest possible language.
3. **Language Tutor:** Acting as a native speaker to help you practice speaking a foreign language with extremely natural reflexes.

2. The ability to maintain perfect context.

Many older AI applications often "lose their memory" after a few lines of dialogue. With its latest 2026 update, Chat Smith boasts intelligent caching, remembering the entire previous conversation to deliver logical, consistent, and deeply personalized responses tailored to your preferences.

3. Unlimited creativity

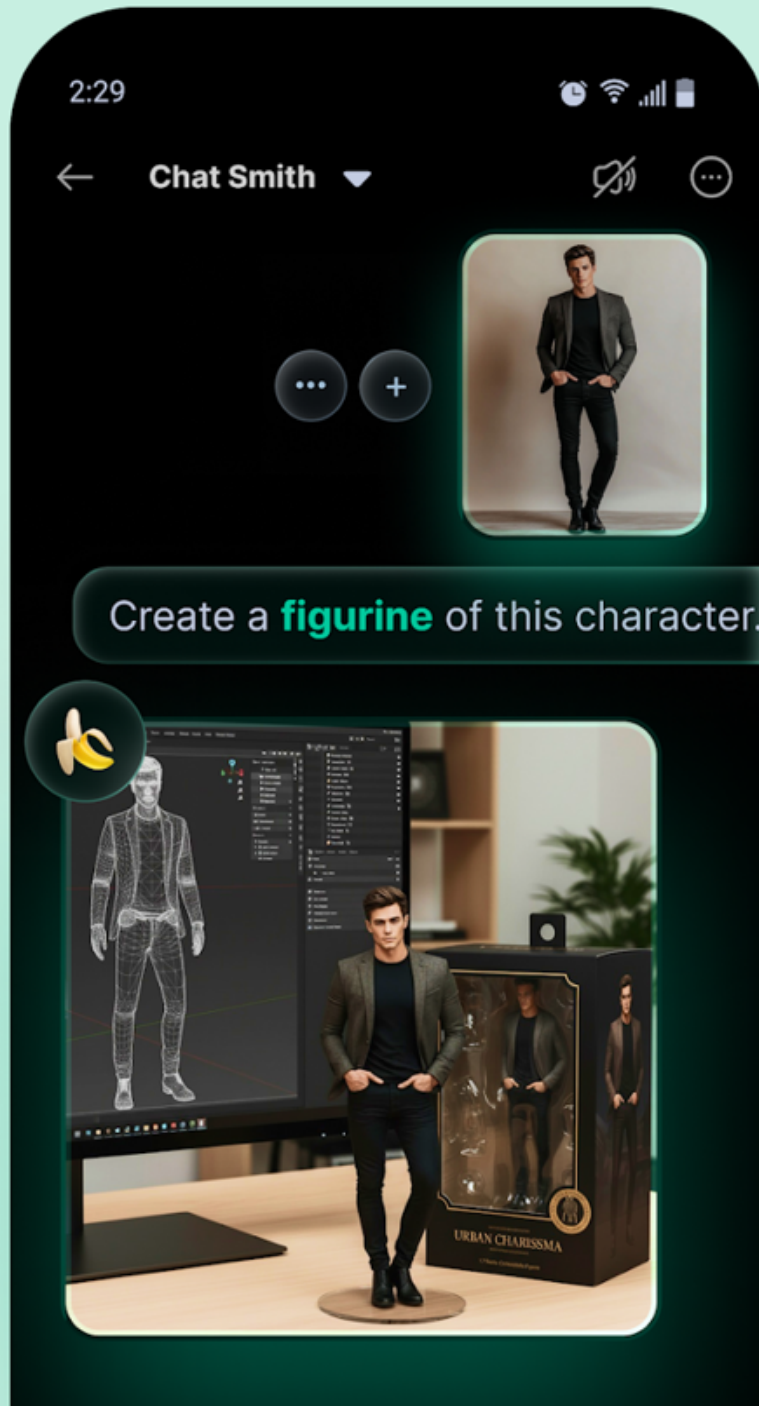

Don't confine Chat Smith to just boring office tasks. Try turning it into an interesting companion:

1. Running out of ideas for a romantic dinner? Just throw the leftover ingredients in your refrigerator at the AI ??and it will design a chef-quality menu for you.
2. Looking to plan a self-guided backpacking trip in Northwest Vietnam? AI Agent's travel services will create a detailed daily itinerary with precise cost estimates.

Below the status bar, the app name "Chat Smith (GPT-5.2)" is displayed with a dropdown arrow, a microphone icon, and a menu icon. The main content area shows a notebook page with handwritten math problems. A green box highlights the equation $(x-1)(2x-3) - 2x^2 = 0$. A "Snap" button with a camera icon is overlaid on the notebook. Below the notebook, a dark box displays the solution $\frac{3}{5}$ and the steps to solve the equation. A "Solve math problems" button with a notepad icon is located at the bottom left of the notebook area.

$(x+3)(x+5) = (x+4)(2+x)$

$(x-1)(2x-3) - 2x^2 = 0$

$2(x+3) + 4(2-2x) = 2(x-2)$

Solution $\frac{3}{5}$

Here are the steps:

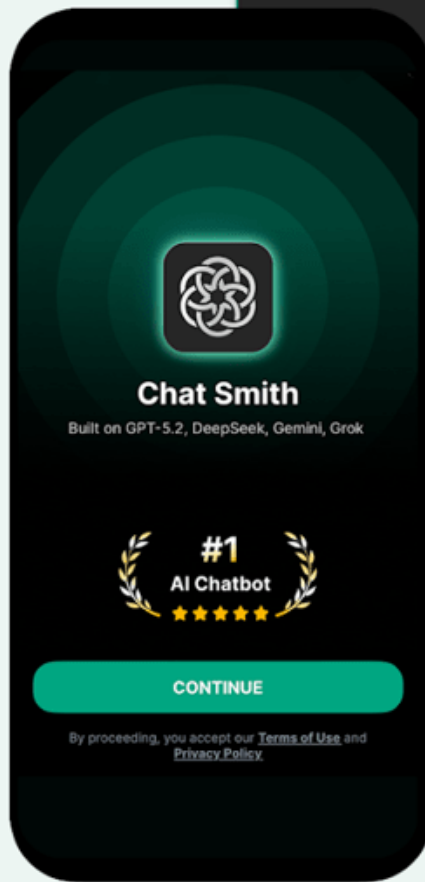

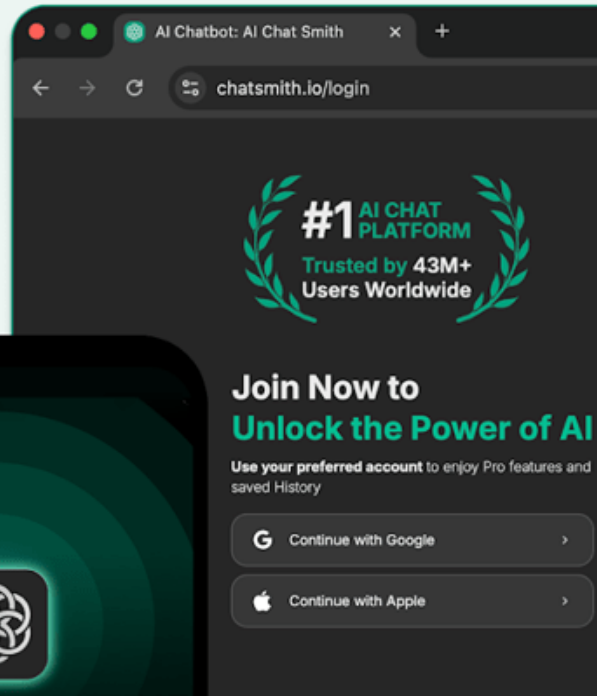

- $(x-1)(2x-3) - 2x^2 = 0$
- $2x^2 - 3x - 2x + 3 - 2x^2 = 0$
- $-5x + 3 = 0$
- $-5x = -3$
- $x = \frac{3}{5}$

1. **Choose the right Agent:** Don't use a general agent to ask about code. Go to the dedicated section for programmers to ensure the algorithm is activated optimally.
2. **Provide specific input:** Instead of saying "Write an essay," say "Write a short Facebook post about environmental protection, targeting Gen Z." The results might surprise you!
3. **Two-way interaction:** If the AI's answer isn't quite right, don't give up. Point out what you're not satisfied with (e.g., "Please make the tone a little less formal") so the AI can improve the answer.
