## 1. Check on the service homepage

### Step 1:

To check for broken links on the service homepage, you access the following address:  
<https://error404.atomseo.com/>

### Step 2:

Next, in the **Enter a website to check box**, proceed to paste the website address and click the **Check** button.

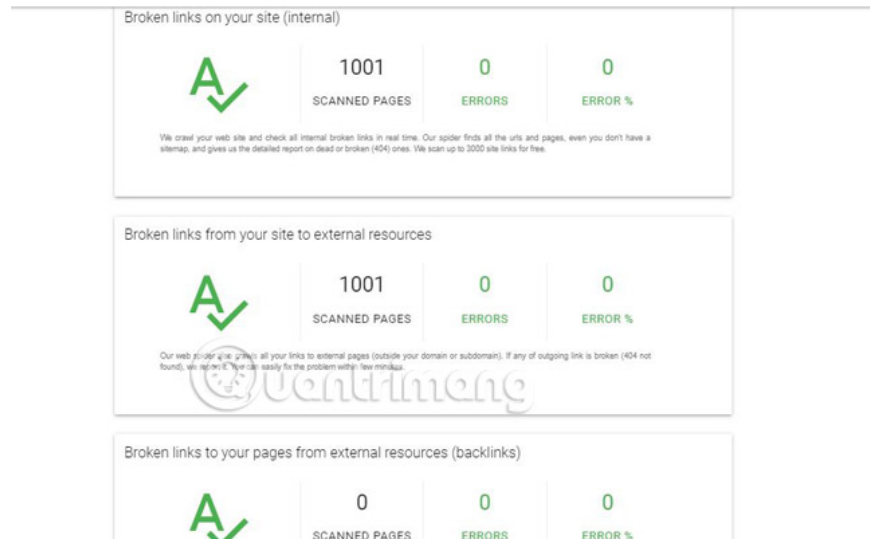

### Step 3:

You need to wait for a few minutes for the service to start the checkout process. Fast or slow time depends entirely on the number of links available on the website.

This service allows checking various types of links, including:

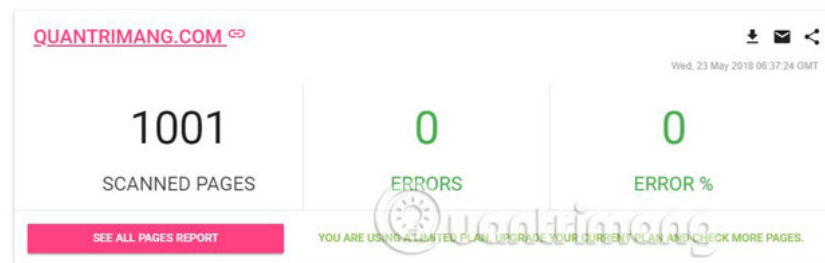

1. Links on your site (internal): Internal links on the site.
2. Links from your site to external resources: External links on the site.
3. Links to your pages from external resources (backlinks): Links to your site from another website.
4. Anchor on your web pages: Insert links below text on the web page.

#### Step 4:

The checkout process will end, you will know the number of pages the service has performed. Besides, you also see the number and percentage of broken links detected.

Broken links report for quantrimang.com

Scroll down to see the test results on each link type. Or click the **See all pages report** section to download and view the results in the Excel spreadsheet file format.

## 2. Check with the utility on Chrome

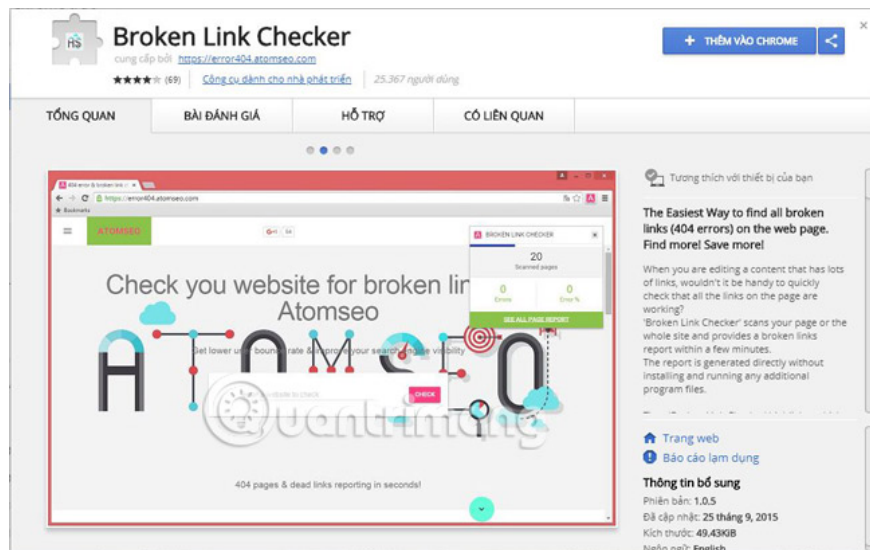

You can use the broken link check feature with extensions on Chrome. In this article, we want to introduce you to the following two utilities:

### Broken Link Checker utility:

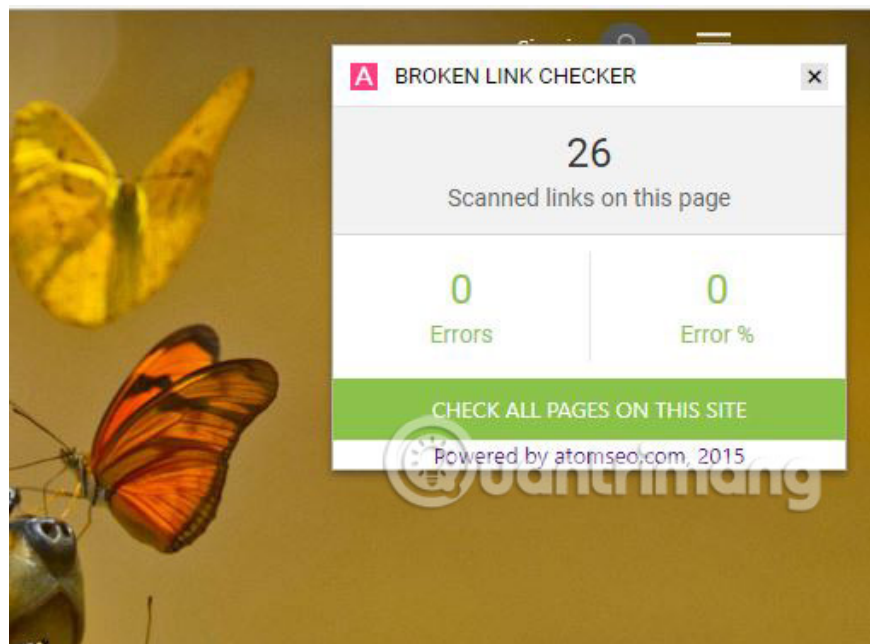

First of all, you need to install the extension called Broken Link Checker for Chrome through the link below.

1. Download the Broken Link Checker utility

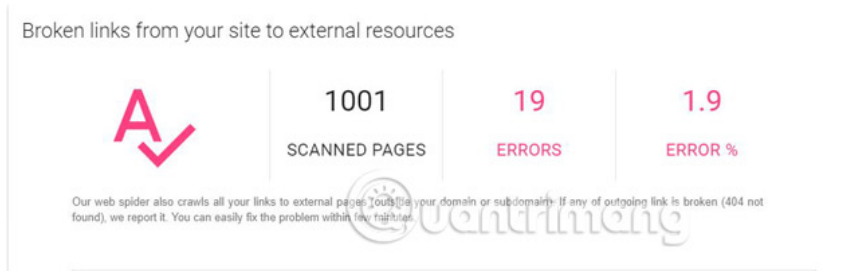

Next, you select **Add to Chrome** in turn> Confirm **Add add-on** to complete the installation process.

Now, to check for broken links, open the website you want. Then, click on the widget icon on the toolbar like the one below. Immediately, the utility will immediately check and display it within its pop-up interface.

Similarly, the Broken Link Checker utility will also list the number of links to be checked, the number of broken links found as well as the corresponding percentage. If there is a broken link, the utility will appear immediately below the pop-up interface. Click **Check all pages on this site** to check all pages on the open website.

## Utility Check my links:

Adding a Google Chrome extension that scans the links in a website you are viewing returns results that determine which links are still accessible, which links no longer exist. at. You can download the utility to integrate into Chrome browser [here](#).

After installation is complete, you will see a new icon appear next to Chrome's URL bar, the usage is extremely simple.

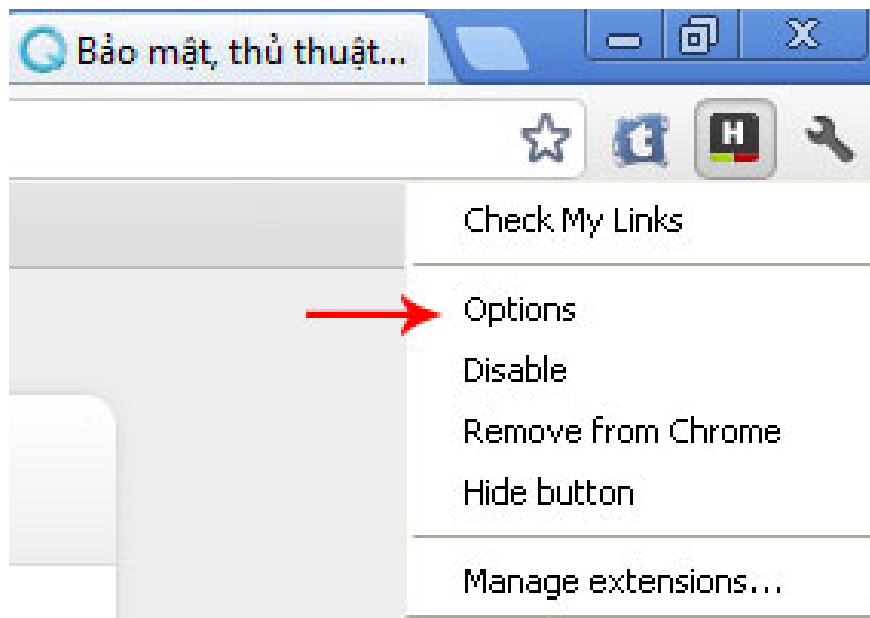

When browsing any website, if you want to check whether the links within that website exist, just click on this icon, the utility will immediately scan the links on the page you are viewing.

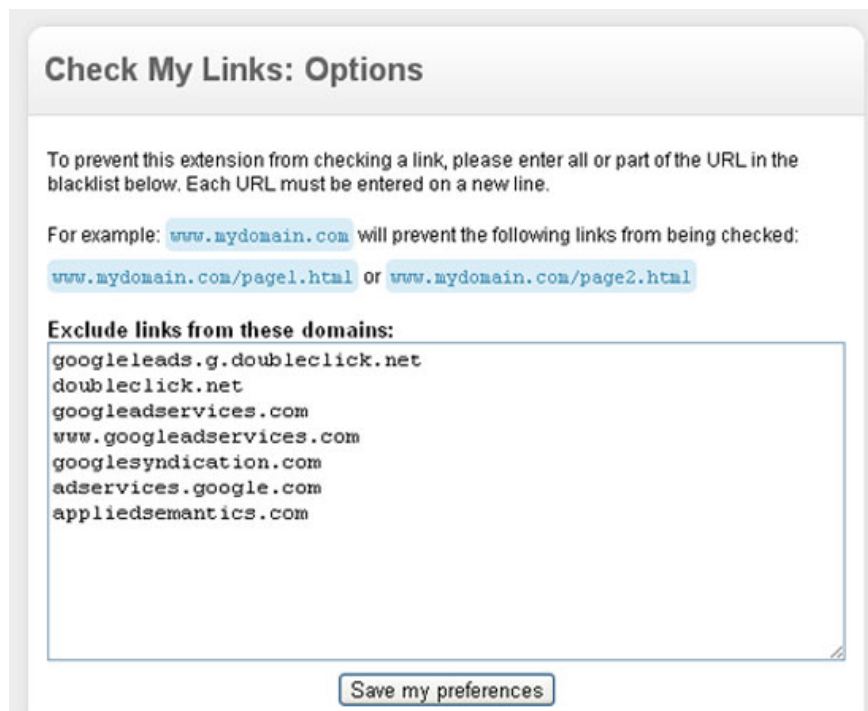

When the process reaches 100%, complete the scan. If the links are still active, they will be highlighted in green, otherwise if the links are no longer active, they will be reded with comments about errors such as 404.

You can set some URLs that do not belong to the utility's scans on the *Options* page. For ad-style URLs, it is not necessary to scan to avoid losing time. Right-click on the utility icon and select *Options*.

On the *Option* page, fill in the URLs that need to be listed as *'blacklisted'* and click the *Save my preferences* button to save it.

*Good luck!*
