TipsMake.com - In the following article, we will introduce you to the free tool WinDirStat- with the function to list and display specifically how the capacity of the hard drive is being used.

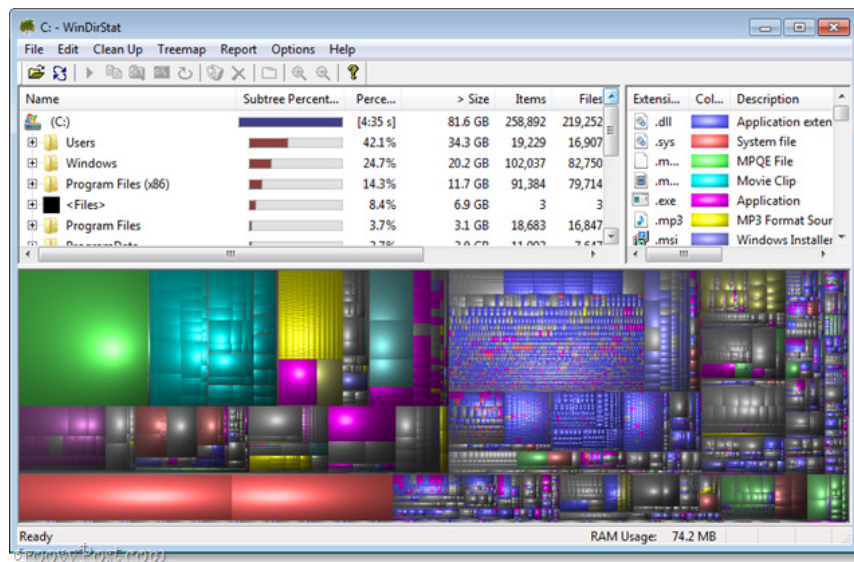

Currently, WinDirStat supports up to 12 different languages, default to English, but you can change it at any time. The languages here include: **Italian, Dutch, Polish, Russian, Estonian, Hungarian, English, French, Finnish, Spanish, German and Czech** . The installation process is very simple, and on the first startup, the program will ask you about which hard drive partition to check. Users can choose each partition or all:

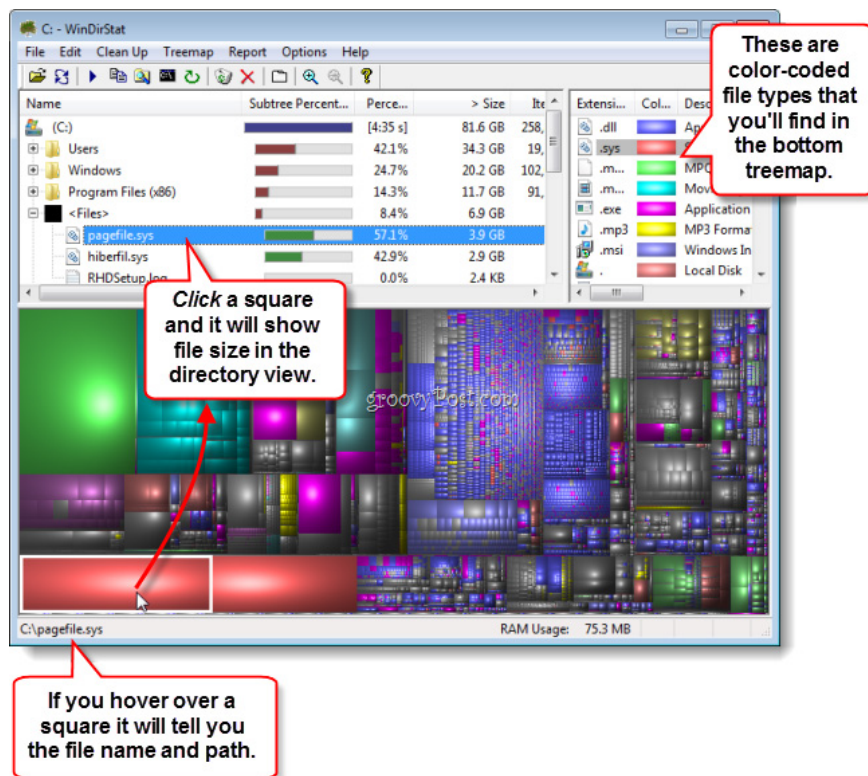

Depending on the storage capacity and data, this process will happen quickly or slowly:

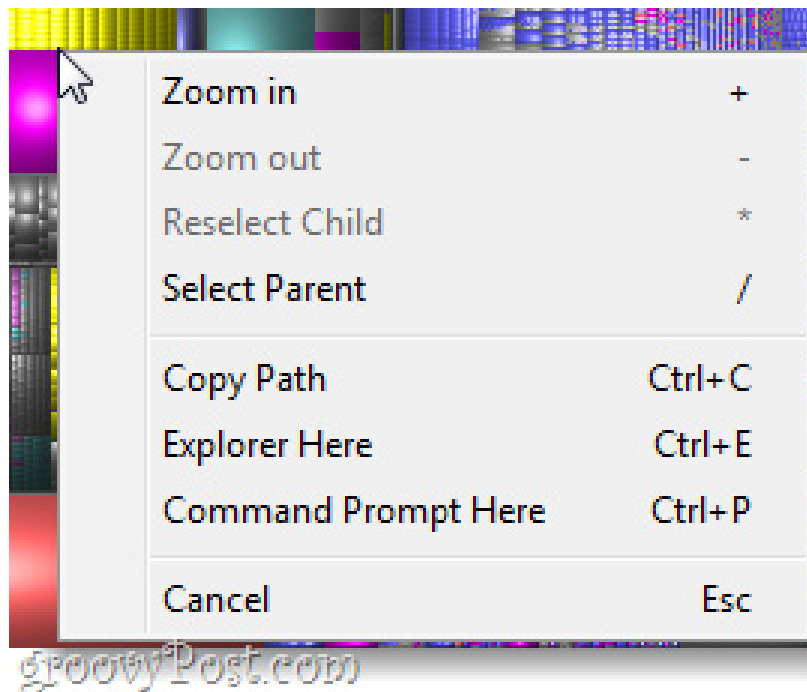

After finishing, the program will display specific results in the form of graphs as follows:

The main function of WinDirStat is to provide an overview for users about the current storage status of the hard drive. Specifically, the upper window displays the most used files, and sorts them in descending order, but you can change the settings quickly and easily. The list of items displayed at the bottom is treemap, with many different shapes, representing different types of data files - these files are marked by color and standards by extension, notes information. specific likes in the right window.

When you want to find out more information, just right-click on the corresponding data area:

With such basic but useful features, WinDirStat can be considered as one of the indispensable utilities in every computer, and with this tool, users will easily monitor and monitor all sets the state of storing specific data on each partition or hard drive. Good luck!
